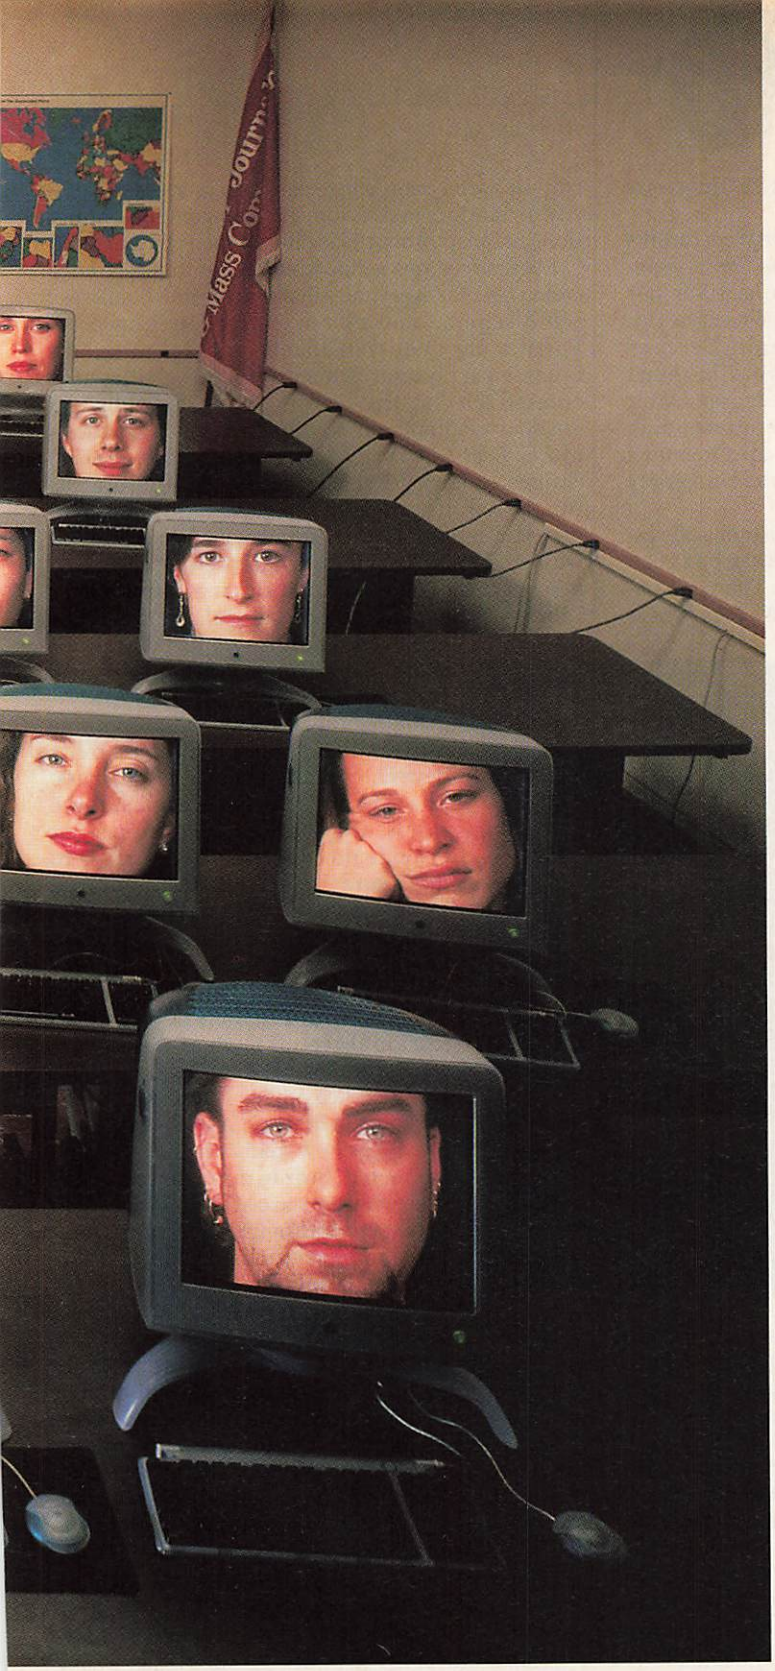
Degrees of sep



aration

More students are getting their master's or Ph.D. without stepping onto a university campus

By Carolyn Kleiner

A rollicking children's tune blares as students enter LIS 406—a graduate-level library science course at the University of Illinois–Urbana-Champaign. People chat animatedly among themselves until the professor arrives and starts reading aloud from *Mike's House*, a picture book about a young boy's trek to the public library. Some students listen and watch intently; others continue whispering back and forth about the story or the weather. Afterward, the class splits into discussion groups to talk about helping young children learn to read. All in all, LIS 406 is a typical course—except for one fact: The classroom is a virtual one, with students logging in from bedrooms and offices all over the globe.

True, the majority of graduate students still favor bricks-and-mortar institutions and all that typically comes with them, from ivy-covered buildings and seemingly endless rows of library books to chance encounters with peers and professors between classes. Yet a steadily rising number of people are pursuing advanced degrees without stepping onto a university campus. According to the most recent report by the National Center for Education Statistics, about 1 in 10 of the 2.1 million individuals taking graduate-level courses in 1997-98 was enrolled in distance education classes. In the past year, remote enrollment has more than tripled, to 4,441, at the University of Maryland University College, one of the most established distance-ed providers. As interest grows, more and more schools are investing in remote learning, from big publics like Pennsylvania State and elite universities like Stanford to for-profit institutions like the University of Phoenix.

Anytime, anyplace. Distance education started with correspondence courses in the late 19th century and continued to grow through the development of radio, cable television, and videotape technologies, all of which have been harnessed to connect teachers and learners. But the past decade has seen a huge upsurge of interest in remote learning on the part of students and universities alike. Why? The Internet revolution, for one thing. The Web now provides a formerly missing ingredient in distance ed—quick and easy communication between students and instructors, and among classmates. In addition, thanks to the evolution of the information-based economy, many workers must keep updating their skills. "To stay employable, you need to keep on learning," says Kay Kohl, executive director of the University Continuing Education Association, an organization of more than 400 schools. This trend has given rise to a markedly older pool of graduate students: Today, more than half are over age 30, and nearly one quarter are over 40. Distance education often is a great fit for these working adults, many of whom have families and find it difficult to skip a child's ballet les-

Photograph by Louis Psihoyos—Matrix for *USN&WR*

son or fight rush-hour traffic to get to a university campus for class.

"I had always wanted a master's degree, but it's hard to suspend a career and a family for it, especially when the closest school of public health is four hours away," says Jerry Parks, 45, assistant health director for Albemarle Regional Health Services in eastern North Carolina. As it turns out, he didn't have to move or commute to get his degree: After three years of coursework via teleconferencing and the Internet, Parks is finishing up a master's from the School of Public Health at the University of North Carolina–Chapel Hill.

As more and more people turn to distance education, a debate has flared over whether it can be a good substitute for face-to-face instruction. Thomas Russell, author of a 1999 report titled *The No Significant Difference Phenomenon,* which reviews more than 350 studies of distance-learning programs, argues that the two modes of instruction are equivalent as far as student learning is concerned. Rebecca Behrend, for one, believes that distance ed is the superior choice. Behrend, 45, obtained a doctorate degree in clinical psychology last spring from Walden University, a well-respected virtual institution. She says the discussions between student and professor—and among peers—were more rigorous than those she experienced in the two on-campus master's programs she previously attended. "We needed to back up and cite references for everything we said [in E-mail postings]," explains Behrend. "It wasn't like the usual chatting in the classroom."

But critics say that many of the studies cited in Russell's book are poorly designed, and they vehemently disagree with his point of view. "I don't think you can get *any* education over the Internet," says David Noble, a historian of technology at York University in Toronto. "Education requires a relationship between people because it's a process of identity formation, validation, encouragement, emulation, and inspiration. This only happens face to face."

Even advocates acknowledge that distance education isn't for everyone—that it takes independence, self-discipline, and a lot of motivation to succeed. Further, the quality of distance-degree programs is uneven at present. "A majority of universities have entered the distance-learning market rapidly and are not well prepared," says Vicky Phillips, coauthor of *The Best Distance Learning Graduate Schools* (Princeton Review Publishing, 1999, $20). "Students run the risk of being guinea pigs." As she points out, program retention rates, which usually correspond with student satisfaction, range anywhere from 20 percent to the 97 percent that Urbana-Champaign's Library Education Experimental Program has achieved. Thus, it's important to consider an array of factors before choosing a school:

JONATHAN SAUNDERS FOR *USN&WR*

VIRTUAL STUDENT. **Norah Campbell spends weekends studying at the entirely online Concord University of Law.**

Accreditation. Along with reputable universities, scores of diploma mills have entered the distance-ed business. The first line of defense against these scams, which take students' money but provide no education in return, is to make sure a school has been approved by one of the six regional boards that accredit universities. This stamp of approval is often a good indicator of program quality. Individual programs can also be certified in their fields by professional groups such as the American Psychological Association and the National League for Nursing.

Program history. Ask distance-ed providers how many students they've graduated. Bear in mind that most online programs are so young that they have yet to grant any degrees. This number should skyrocket in the next few years; in the meantime, prospective students can ask new virtual providers a number of revealing questions: For example, how many graduate students are currently enrolled? Who's teaching remote courses, and what kind of training and experience do they have? Also, confirm that a school truly offers the full range of courses you'll need to complete your degree at a distance. "Some institutions grossly exaggerate their online presence," warns Robert Tucker, president of InterEd, a Phoenix-based educational research firm.

Cost. Check the total price of a distance-education program, including extras, such as required trips to campus. If it seems too good to be true, it probably is: The cost of a reputable distance degree is generally comparable to—or a bit more expensive than—its on-campus counterpart. For instance, the master of science in library and information studies at Florida State University costs $6,132 for in-state students, $21,283 for out-of-state students; the distance versions cost $8,400 and $23,550, respectively.

Academic field. Some subjects clearly do not lend themselves to distance education. You'd be hard

pressed to find a remote graduate program in any of the laboratory sciences, for instance. But programs abound in fields that translate well, including business, education, engineering, and some of the health professions. The number of distance M.B.A. programs has jumped to over 150 in the past five years, says John Bear, coauthor of the upcoming *Bears' Guide to Earning MBAs by Distance Learning* (Ten Speed Press, April 2000, $17.95). Olivier Vavasseur, an Italian businessman who recently completed the Global Executive M.B.A. program at Duke's Fuqua School of Business, says the mostly virtual program made sense from a professional standpoint. Increasingly, business is going to take place online, he says, "and the only way to really put yourself in a situation where you understand it is to study online."

Distance ed has proved to be highly controversial in the field of law. In fact, none of the nation's top schools currently offer degrees at a distance. "So much of legal education—and legal practice—is a shared enterprise, a genuinely interactive endeavor," argued Supreme Court Justice Ruth Bader Ginsburg in a speech last year. "The process inevitably loses something vital when students learn in isolation."

This widely held concern didn't stop Norah Campbell, 24, from enrolling at the unaccredited, online Concord University School of Law, which was launched by test-prep company Kaplan Educational Centers in 1998. The aspiring entertainment lawyer now spends her days working in the copyright department of EMI Music Publishing in New York City and her nights and weekends online, watching video lectures on torts and contracts. She contends she's better off than at a traditional institution. "When you're working full time, you come in and you're tired, and it's easy to miss things," she says. "With Concord, you can rewind the lectures." Still, she will be limited by her distance degree: California is the only state that allows Concord students to take the bar exam upon graduation.

Residency. A number of master's programs and nearly every virtual Ph.D. program have mandatory on-campus stays during which students may meet with peers and professors or participate in labs. Some schools make these trips easier on students than others. At Walden University, for example, residency requirements for Ph.D. programs are offered at different times of the year and in several cities. This flexibility allowed Rebecca Behrend to plan on-campus stays around her children's school calendar and her husband's work schedule.

Technology. Many students enroll in an online program not knowing the first thing about modems, message boards, or E-mail attachments. If you're a newbie, choose a program that eases the transition to the virtual classroom with on-campus or online computer-orientation classes. Also, investigate the kind of technical assistance the school provides students on a day-to-day basis. A few of the top distance-ed providers, including University of Maryland University College, provide help via E-mail and a toll-free hotline, 24 hours a day, seven days a week.

Course delivery. Not every school connects teachers and learners in the same way, and it's important to identify the approach that works best for you. Michael Perez started his master's degree in mechanical and industrial engineering at the Georgia Institute of Technology with video-based instruction: On-campus classes are taped; copies are sent to distance students via UPS. Then last year, he took one of the school's first virtual courses and was quickly converted to online instruction. "In the past I would have to carry around videotapes all over the place, and if I was gone weeks at a time, I would get behind," explains Perez, who travels at least once a week as a manufacturing engineer at General Motors in Warren, Mich. "On the Net, I can access my class from my hotel room or the airport."

WILL MCINTYRE FOR *USN&WR*

EASY ACCESS. **While attending a conference for his job, Jerry Parks went online to catch up on missed coursework.**

Student services. Inquire about the types of services provided to distance students. Can you get academic and career mentoring? Assistance filling out complex financial aid forms? Will you have ready access to a library? At the New Jersey Institute of Technology, for instance, remote learners can log into an online collection of 8,000 full-text digital journals. Students can also use E-mail or a hotline to request on-campus books and articles.

Reputable schools don't cut corners on any of these issues, from accreditation to student services. "Even though [distance learners] are full-fledged graduate students, they're also consumers," explains Gale Tenen Spak, NJIT's associate vice president for continuing and distance education, who employs four "customer-service representatives" in her office. "If we don't deliver, they'll walk." ●

Digital tests spark controversy

Critics say revamped exams limit the options to challenge a score

By Joellen Perry

Forget everything you ever learned about acing graduate admissions tests. As of last fall, the Graduate Record Examinations—General Test and the Graduate Management Admission Test, together taken by over 600,000 people annually—are offered only on computer, and the new format precludes traditional test-taking strategies, like leaving tricky questions for last. But while the digital tests may seem more intimidating than their paper-and-pencil predecessors, they are no harder. And, as before, there are strategies for doing well.

Educational Testing Service, which runs the GRE and GMAT, says the new computer-adaptive tests, known as CATs, are more convenient, and by some measures they are. While test takers used to wait up to six weeks for paper-test scores, CATs display results as soon as an exam ends. And rather than offering the tests on just a few scattered Saturday mornings, ETS administers CATs year round, six days a week. The GRE-CAT also can take less time to complete. Part of the reason is that CATs adjust to individual ability levels. Answer a question correctly and a harder one, with a higher score value, pops up; flub the problem and the computer returns an easier query. "Why waste time giving you questions you'll do well on?" asks ETS spokesperson Kevin Gonzalez. "We find out quickly through the adaptive test where your level is."

SCOTT GOLDSMITH FOR *USN&WR*

MACHINE ERROR? **Amy Cuddy took the GRE by computer and then on paper. On one section, her score jumped 390 points.**

But with the CATs have come new restrictions on the release of information about test scoring. In past years, ETS provided those who asked with their test questions and answers, as well as an explanation of the test's scoring algorithm. This service allowed test takers to challenge, say, whether score calculations were flawed or a question had two correct answers. ETS canceled this service for the GMAT-CAT, however, and will implement a more restrictive version for the GRE-CAT come September. Under the new GRE-CAT policy, test takers during any of eight specified weeks can pay $40 to return to their test center to review just the questions they answered incorrectly. Taking notes will be prohibited, and no explanations will be given of how exams were scored.

Test makers say that because CATs are administered so frequently they must keep questions under wraps—or create a huge pool of queries, which would drive up test costs. But as critics point out, the new disclosure service does not give test takers enough information to challenge their scores. Says Blair Horner, legislative director for the New York Public Interest Research Group, "You can't just trust that ETS will be right all the time."

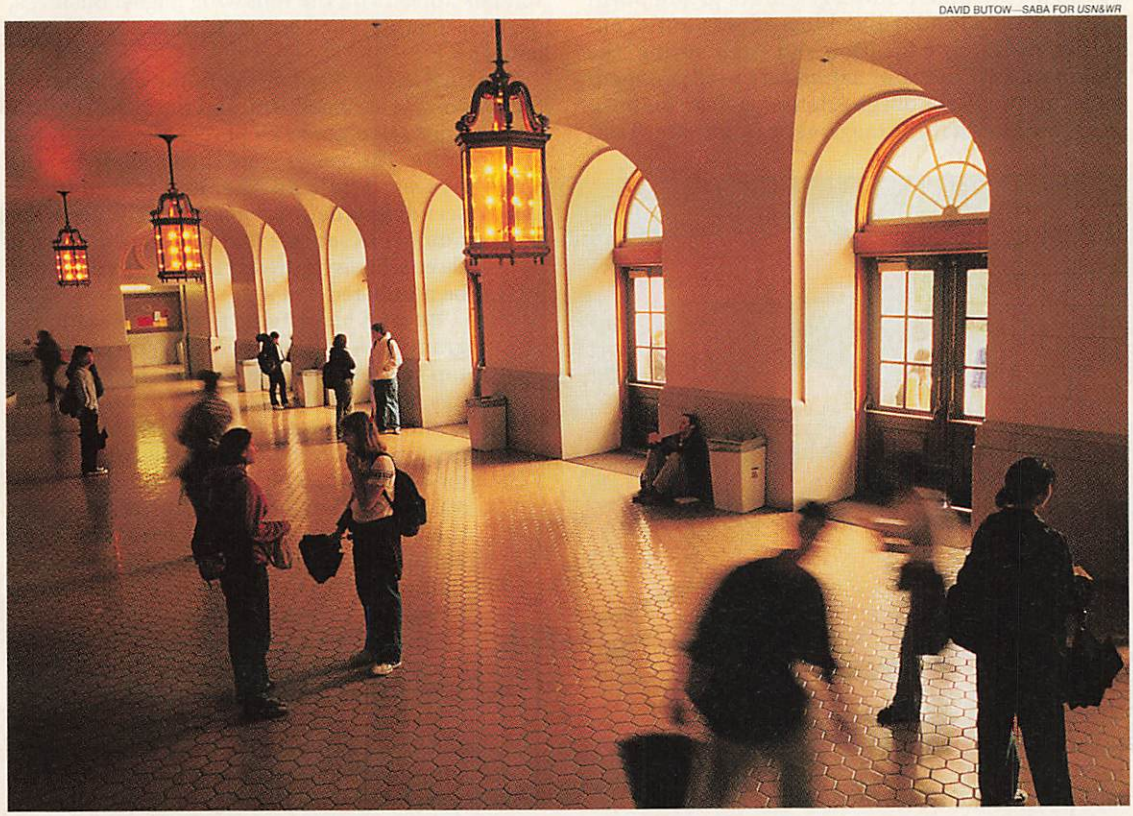
Trust me. Amy Cuddy would certainly agree. When the 27-year-old University of Massachusetts psychology graduate student took the GRE-CAT on Oct. 6, 1998, she scored a dismal 300 on the analytical section. Convinced the computer had blundered, Cuddy took the paper GRE a month later, earning an analytical score of 690. Cuddy petitioned ETS to investigate possible errors in her CAT and give her a copy of her questions and answers, but ETS refused. In April 1999, Cuddy threatened a lawsuit. ETS canceled her CAT scores and refunded her testing fee four months later. ETS declines to comment on the situation, citing a confidentiality agreement.

Understanding how CATs work can help you boost your chances of a solid score. Test-prep software, which typically runs $45 to $60, will familiarize you with the CAT format. And because you can't skip tough questions, you need to master guessing strategies—like learning to spot wrong answers to lower the odds of choosing incorrectly. Test-prep companies also advise test takers to spend extra time getting early questions right. If you miss a lot of questions early on, the exam will lob back easier queries, "[and] ultimately, your score will be lower," explains Trent Anderson, executive director of pregraduate programs at Kaplan Inc. Finally, because CAT scores also depend on the total number of questions you answer, be sure to pace yourself so you are able to complete the exam without guessing madly at the end. Those who want to take advantage of the new question-and-answer service for the GRE-CAT should check ETS's June registration bulletin to find out when it will be available. ●

How we rank graduate schools

Here's a tool to help you assess programs' academic quality

DAVID BUTOW—SABA FOR *USN&WR*



UC-BERKELEY. **The academic powerhouse is first in English, history, and chemistry, and No. 3 in engineering.**

The process of selecting a graduate school requires a long look inward, since the best program for you will be the one—large or small, urban or rural, intensely competitive or not—that provides the coursework and the intellectual challenge you need to thrive. As you research schools' course offerings and weigh their intangible attributes, the *U.S. News* rankings can help you compare programs' academic excellence. While academic quality doesn't come with a refundable guarantee, there *are* recognized indicators that point to it. *U.S. News* gathered data on these indicators in more than 1,000 statistical surveys and nearly 13,000 reputational surveys sent out in the fall of 1999. It's important that you use the rankings to supplement—not substitute for—careful thought and other research.

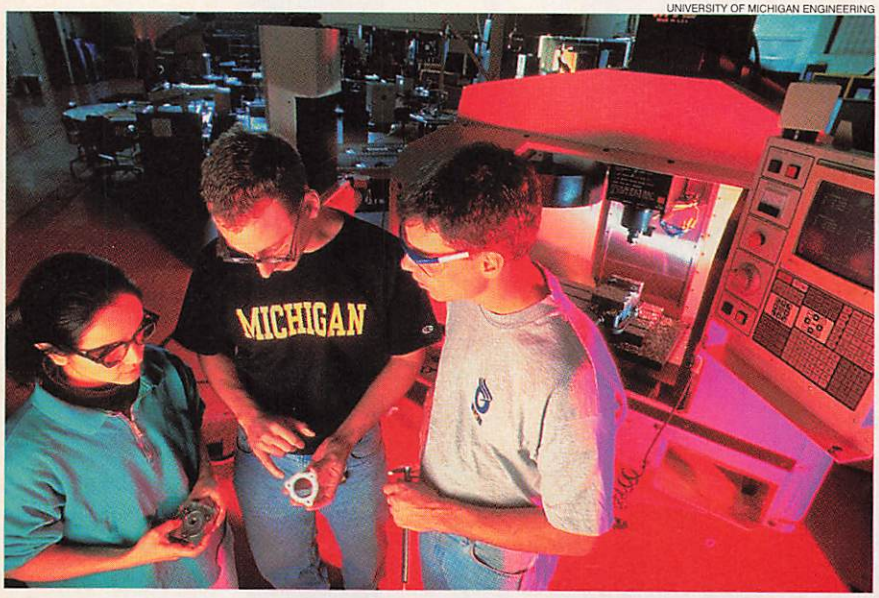
Each year, *U.S. News* re-evaluates graduate programs in five major disciplines: business, education, engineering, law, and medicine. We rank them using objective measures, such as entering students' test scores and faculty/student ratios, and reputation ratings drawn from inside and outside of academia. Experts in higher education have long considered reputation a valid measure of academic quality, and it seems clear that a diploma from a college or university known for excellence offers graduates a powerful edge in the competition for good jobs.

Reputable measure. Deans, program directors, and senior faculty are asked to judge the overall academic quality of programs in their field on a scale of 1 ("marginal") to 5 ("distinguished"). Nonacademics are asked to submit a list of up to 25 schools that they consider to be the best in their field. In medicine, we survey residency program directors; in law, hiring partners at law firms as well as professionals in public service. Superintendents from large school districts are invited to identify the best schools of education based on their experience hiring graduates. Corporate recruiters are canvassed for their knowledge of business and engineering programs. This year, at the suggestion of the MBA Career Services Council, we included recruiters who attended job fairs sponsored by consortia of business schools and thus were likely to have first-hand knowledge of a wide range of programs.

The statistical measures that account for the

greatest proportion of each school's ranking have been associated with educational excellence, too. These measures fall into two categories: inputs, or the qualities that students and schools bring to the educational experience, and outputs, measures of how well the program prepared students for success. The caliber of student that a program attracts—which influences the academic climate—is measured by the mean undergraduate grade point average and standardized test scores of the entering class. For education and engineering, the Graduate Record Examinations are used; for medicine, the Medical College Admission Test; for business, the Graduate Management Admission Test; and for law, the Law School Admission Test.

UNIVERSITY OF MICHIGAN ENGINEERING



U. OF MICHIGAN. **Like Berkeley, it's among the top 10 schools in education, engineering, business, and law.**

Other input measures are outlays that affect the quality of education. For example, engineering and education schools report their total research expenditures, as well as the number of faculty members engaged in research. Law schools are asked how much they spend on faculty salaries, libraries, and student support services. We adjust the figures law schools provide on instructional expenditures for regional differences in the cost of living.

The output. To judge how capably a program develops its students, *U.S. News* factors into the ranking formula such output measures as the rates at which law school graduates pass the bar exam and the mean starting pay package enjoyed by new M.B.A.'s. Whenever possible, data are gathered following the norms established by standards-setting bodies in the discipline. Thus, our survey uses the format mandated by the MBA Career Services Council as the standard for reporting salary data. Similarly, we use questions in our law survey that are modeled on ones the American Bar Association uses in its annual survey of law schools to gather figures on enrollment and bar passage rates.

To arrive at a school's rank, we first standardized the value of each quality indicator. This common statistical adjustment was made because not all indicators vary uniformly around their means; applying weights to standardized values ensures that the weights will have the desired impact. The weights applied in each discipline's ranking model reflect the considered judgment of *U.S. News* about which measures of quality matter most. (Detailed information about the quality indicators and weights used to rank schools appears on the following pages: business, 24; education, 32; engineering, 40; law, 50; and medicine, 64.)

The final scores were rescaled; the highest-scoring school was assigned 100, and the other schools' scores were calculated as a percentage of that top score. The scores were then rounded to the nearest whole number and placed in descending order. A school's rank reflects the number of schools that sit above it; thus, if three schools are tied at 1, the next school will be numbered 4, not 2.

Beyond identifying the best overall programs in a discipline, *U.S. News* ranks the top schools in some of the larger specialties, based solely on their reputation among academic experts. Someone who hopes to practice health law, for example, will find the top-ranked programs in that specialty on Page 50. Nuclear engineering? Universities with the best programs can be found on Page 40. In all cases, the schools verified their specialty offerings in writing or, in a few cases, by phone.

Master's and doctoral programs in all other disciplines covered in the guide—the arts, sciences, social sciences, and the allied health fields—are ranked only by reputation. Again, *U.S. News* surveyed the dean or top administrator and at least one other administrator or faculty member at each school and asked them to rate the programs they were familiar with in their particular discipline. The disciplines ranked by reputation only are generally evaluated every third year; this year, we reassessed programs in heath care. Data for the rankings in the arts were gathered in 1996; for the humanities and social sciences, in 1997; and for the sciences, in 1998.

The quality of the rankings based only on reputation was tested in 1997 when Evan Rogers of the Arizona State University provost's office and Sharon Rogers, a higher-education consultant in Virginia, compared the *U.S. News* reputation rankings of graduate disciplines with those done by the National Research Council, a private, nonprofit arm of the National Academy of Sciences and the National Academy of Engineering. Rogers and Rogers concluded that "the *U.S. News* disciplinary ratings are just as credible as those produced by the NRC using a much more elaborate methodology." We trust you will find the rankings to be a useful research tool—one efficient means of comparing schools' academic strengths and weaknesses. ●

Data analysis was conducted by Gayle Garrett, Robert J. Morse, and Samuel M. Flanigan.

Apply to the country's finest business schools on your lunch hour.

Now that you've decided to apply to business school, turn to Embark.com,™ the number one online guide to higher education. Embark.com is an easy-to-use, comprehensive site that gives you everything you need to choose and apply to a school. And since many MBA programs now encourage you to apply online, Embark.com lets you do just that. Log on and you can apply to 48 of *U.S. News and World Report's* top 50 business schools. And you have the peace of mind that comes with knowing your application will get to the right person, on time and in the proper format. So before you go anywhere else, visit our MBA area at www.embark.com/mba and get your future moving today.

Business

E-commerce is forcing schools to 'rethink the guts' of the M.B.A.

By Mary Lord

Remember "irrational exuberance"? That was how Federal Reserve Board Chairman Alan Greenspan characterized the stock market's technology-driven surge back in 1996—and the Dow Jones average is up more than 4,000 points since. Until recently, most of the country's 359 accredited business schools dismissed the Internet frenzy as irrational, too. Now, virtually all of them are scrambling to stake their claim in today's turbocharged new economy. Consider:

- Five years ago, Vanderbilt University's Owen Graduate School of Management launched the country's first electronic-commerce concentration—with one student. Today, half the school is pursuing the subject, and the program has grown to include a dozen professors, 19 courses, and a center devoted to E-research. "I mean, this rocks!" marvels Prof. Donna Hoffman, who created the program with her husband and colleague, Tom Novak.
- Last fall, the University of Chicago Graduate School of Business had to post monitors at the door after 225 students tried to register for a Saturday morning E-business strategy class that had seats for just 65. Similar stampedes erupted at the University of California–Berkeley's Haas School of Business, where fire marshals intervened, and at the MIT Sloan School of Management, where a third of the student body has signed up for the new E-commerce "track."
- The Harvard Business School, which sent an astonishing 35 percent of last year's graduates to new-economy firms or the venture capital companies that support them, has never had majors—and sees no need to create one for E-commerce. But it has replaced the flagship general management course

DOGS4U.COM
By matching buyers with breeders, these Vanderbilt students plan to bring in $1.5 million the first year.

CHRIS USHER FOR *USN&WR*

required of all first-year students with an Internet-laden offering called "Entrepreneurial Management."

● In the past year alone, a dozen institutions—including the University of Pennsylvania's Wharton School—have developed E-commerce concentrations. Scores of others are updating conventional finance and marketing courses with E-business case studies. Carnegie Mellon University unveiled the nation's first M.S. in E-commerce last May, drawing more than 3,000 applicants for 36 slots. "It's a gold rush," says the B-school dean, Douglas Dunn.

Behind the jackpot fever is the slew of dot-com start-ups that have made millions for young founders—and ignited imaginations on campus (Page 19). More than 100 student ventures took root at Harvard last year, and half had funding by graduation. At the University of Michigan, where first-year students are required to complete a semester-long project, 75 worked on their own or classmates' start-up ideas. Among them: a Spanish online medical service and BeautifulIsland.com, a portal to bring senior citizens online.

Time to rethink. Yet dot-com start-ups represent only a tiny slice of a "much, much larger revolution that literally is transforming every kind of company," says Joseph Morone, president of Bentley College in Waltham, Mass., whose new Information Age M.B.A. incorporates E-business into every course. Technology has squashed corporate hierarchies and streamlined supply routes. Suddenly, a pedigreed institution like Christie's (capitalization: $2 billion) needs tech-savvy young turks to put it online alongside auction upstart eBay ($19 billion). What happens to brand loyalty when customers—"eyeballs" in today's lingo—can bargain-shop online? How do you "value" an Amazon.com? "I don't know the answers," says Morone. "But we have to be rethinking the guts of the M.B.A."

Like the corporations that hire the bulk of their students, B-schools are adapting to this wired new world in very different ways. "The fact that [Vanderbilt] saw so early on that this was worth a concentration—that awareness alone is what sold me," says E-commerce marketing major Julia Saltonstall, 29. Saltonstall's six required courses, for example, have taught her how to mine databases and comb Net-user demographics for shopping trends. Wharton's "Managing Electronic Commerce" concentration pools 35 existing courses with E-business components from such diverse disciplines as finance and health care. Students pick one of several "tracks," including supply-chain management and electronic media and marketing.

Many top-tier schools, notably Chicago, Harvard, the University of Virginia, and Stanford, decry such programs as flavor-of-the-month majors. Instead, they prefer to weave E-commerce throughout the curriculum; cyberworkers are discussed in the context of organizational behavior, for example, rather than in a separate course on virtual organizations. The idea is to provide a foundation of general management skills, from parsing financial statements to motivating people, that students can apply to any kind of company. "The Internet doesn't change the way we do business," contends Edward Snyder, dean of Virginia's Darden School. "It's bringing the old paradigms into today's world."

Whichever approach appeals to prospective students, they'll want a school that emphasizes hands-on experience. Top programs of all stripes require M.B.A. candidates to tackle actual problems for real organizations. At Vanderbilt, for example, corporate sponsors like Hewlett-Packard and iVillage.com pay $25,000 a year for teams of "consultants" to assess the markets for their products, or to develop E-commerce business plans. Last spring, one group analyzed the effectiveness of Web sites run by online retailers from the Gap to Victoria's Secret. At Bentley, students recently helped the search-engine Lycos figure out a marketing plan for the launch of LYCO Shop, its E-tailing spinoff.

Students in good programs find themselves being asked to identify an online niche, then write a business plan to exploit it. Saltonstall, for example, saw opportunity in the 1.8 million purebred puppies purchased annually. Dogs4you.com, the project she worked on with four classmates last fall, would provide dog lovers with a searchable database of reputable breeders, "head to tail" shipping insurance, chat rooms, and "puppy cams" so buyers can check on their pets before they leave the kennel. Expected first-year revenue of $1.5 million from user fees and sales commissions would quickly offset $1.7 million in start-up costs—at least on paper.

Teaching tech. Most E-commerce programs "teach" technology by installing state-of-the-art systems and expecting M.B.A. students to use them. At Rensselaer Polytechnic Institute's Lally School of Management, which began a new E-commerce concentration this spring, an interactive lab lets students

Silicon Valley companies competed to woo M.B.A. candidates at a recent job fair in San Francisco.

around campus or across the globe collaborate on Web projects using laptops, televisions, and projectors. Every Harvard B-school course now is posted as a Web page and can include video clips or up-to-the-minute company financial statements.

Carnegie Mellon's emphasis on hardware and software systems sets the school's program apart. The 12-month E-commerce master's program is run jointly by the computer science department and the B-school—and that's what convinced environmental consultant Tom Trebilcock, 31, to enroll last year. In class, he learned about networks and such emerging Internet technologies as "streaming" multimedia. He now is applying the technical knowledge in a class project to help Pittsburgh's public TV station identify online broadcast opportunities and rivals.

In a field so new, real-time research should inform what goes on in the classroom. "If you don't have that, you don't have a program," says Vanderbilt Professor Hoffman, whose students' findings on such issues as online consumer behavior become fodder for next semester's classes. Harvard established a Silicon Valley research outpost that has churned out 50 case studies of new-economy companies in the past 18 months, while Stanford plans a $20 million E-business research center. Bentley College earmarks $500,000 a year so professors of finance, accounting, and other subjects can conduct E-business research and integrate it into their courses.

Solid E-commerce programs prepare students to work for large organizations as well as dot-com fledglings—and corporate America is recruiting in earnest. Saks, the department store chain, hired four Vanderbilt students last year, while Dell Computer's online division snagged 22 MIT-Sloan grads. And it's not just the "E-tailers" that need these managers: Forrester Research predicts that business-to-business E-commerce will reach $406 billion this year, 10 times the expected market for consumer transactions. Employers are "banging our doors down" and offering signing bonuses of up to $50,000, reports Carnegie Mellon spokeswoman Chriss Swaney. The typical bonus for Vanderbilt E-commerce grads last year was $22,611—50 percent more than classmates got who majored in finance or marketing. As for Julia Saltonstall, someone else will have to launch dogs4you.com. She is weighing offers from Dell Computer, FedEx, a large brand management company, and a bank making its own leap into cyberspace. ●

GETTING IN

It's tougher than ever

For the first time in almost a decade, the steadily rising tide of applications to the nation's business schools has shown some signs of ebbing. Such elite institutions as Stanford, the University of Michigan, Dartmouth, the Sloan School at MIT, and the University of California-Berkeley report that the growth of their applicant pools has recently slowed or halted. Some institutions actually saw their numbers drop last year.

Ergo, your chances of being accepted should be better, right?

Probably not. "We're increasing the quality [of applicants] without increasing the total pool," says Paul Danos, dean of the Tuck School at Dartmouth, which still receives 14 or 15 applications for every spot. Indeed, the average GMAT scores of Tuck students have risen some 30 points in the past five years. At Case Western Reserve University, Tulane, and Southern Methodist University, where the number of business-school applications fell last year (by 6 percent, 15 percent, and 18 percent, respectively), the credentials of the entering classes likewise improved. "There's some self-selection going on. Unlike in the past, potential applicants aren't bothering to apply if they don't feel they can get in," explains John Silbernagel, assistant dean for admissions at Tulane's business school. "As a result, the bottom third of our applicant pool has disappeared over the past two years."

Questionable trend. Moreover, a downward trend in applications is hardly universal. Harvard, Columbia, and the University of California-Los Angeles were deluged as usual with contenders for the current class; the University of Texas-Austin and Washington University in St. Louis watched their applicant pools swell by an astonishing 25 percent in one year. Vanderbilt and SMU both report a surge in applications for the coming year. "Although there appears to be a slight decline at some schools, one year doesn't make a pattern," says Daphne Atkinson, director of Information Services for the Graduate Management Admission Council, which sponsors the GMAT. A GMAC poll indicates that at most institutions, the number of applications continues to rise.

The reality is, at schools in the second half of the *U.S. News* top 50, a grade point average of 3.4 or higher plus five years' work experience is becoming the norm for acceptance. At elite schools, the competition is at least as stiff as ever. *–John Swicegood*

Because she wants an economics degree.

Because she deserves a chance to get an economics degree.

Because she shouldn't need one to pay for it.

Sallie Mae understands the process of planning and paying for college can be a confusing one. But it doesn't have to be that way. That's why we're here to answer questions and make things understandable. There are a whole host of financing and lending options available. Sallie Mae will guide you through the loan process so you can make the right decisions, save the most money and follow your dreams.

Why bother with school?

Many students wonder if they should start a 'dot com' instead

SCOTT GOLDSMITH FOR *USN&WR*

UP TO SPEED. **Martin Muendel, David Shapiro, and Phong Nguyen will use technology to help athletes train.**

BY DAVID L. MARCUS

On a cold night in January 1998, while channel-surfing through prime time, Lekan Akinyanmi had an inspiration: Interactive TV is the future. Akinyanmi, who was halfway through his first year at MIT's Sloan School of Management, started brainstorming with classmate John Hervey. In many parts of the world, they figured, there are so many cable and satellite offerings that busy people can't get a fix on what to watch. By using mathematical algorithms, they could design an interactive program that would recommend TV shows based on the user's list of favorites. A *Seinfeld* devotee mourning the end of that sitcom, for example, could be enticed to try *Friends*.

In their New Enterprises class, Akinyanmi, 28, and Hervey, 29, drew up a plan for EnCabler.com. As summer approached, they found themselves pondering questions that they earlier would not have imagined: Should they find high-paying internships or devote their vacations to their project? Should they stay in school or take a half-million dollars from venture capitalists who urged them to drop out and work full time?

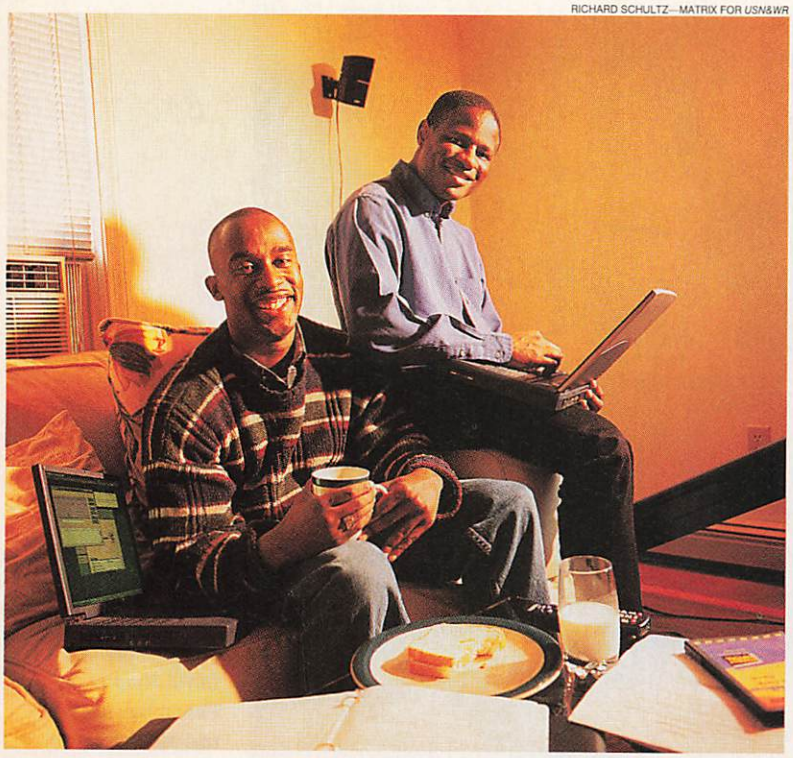
Those are the kinds of dilemmas that M.B.A. students face today. While the turn-of-the-century boom has driven B-school applications to record levels in recent years, the siren call of the Internet has lured some of the most enterprising students out of the classroom. At Dartmouth's Tuck School, 20 of the 189 men and women admitted to the class of 2001 deferred admission—most of them to take Silicon Valley jobs. At the Wharton School of the University of Pennsylvania, 25 of the 765 members of the class of 2000 did not return after the summer. Most dived into high-tech ventures.

Fast sell. A couple of generations ago, starting a company while at grad school meant getting a concession to sell sodas at the stadium. Founding an enduring brick-and-mortar company while carrying a full course load was almost unthinkable. These days, students launch and sell ventures in 18 months—less than the time it takes to earn that degree. The campuses of the nation's top business schools are abuzz with talk of 30-year-old former students who have made millions in the Internet gold rush.

Every first-year student at Sloan, for example, knows that alumni Monica Lee (class of '97) and Andy Rebele ('95) started online auction house

CityAuction.com, then sold it to Ticketmaster for $50 million. Jonathan Seelig left in 1998, a year before graduation, to help found Akamai Technologies, which provides networking services for the Internet. The company went public last fall and instantly made him wealthy. "You want to be able to do something you're truly passionate about," says Jack Colletti, 30, who founded and sold an online site for investment clubs after entering Carnegie Mellon's M.B.A. program. (He signed an agreement not to disclose the selling price.) Colletti says B-school gave him the market analysis training and the alumni contacts to go into business for himself. Eight years in the Navy taught him discipline and the insight for another company he has started, iServed.com. It will serve as a portal for military veterans and active-duty personnel who want to keep up with Pentagon news and information about health benefits and reunions.

RICHARD SCHULTZ—MATRIX FOR *USN&WR*



ENCABLER.COM. **John Hervey and Lekan Akinyanmi plan to help TV viewers pick shows—after they finish at Sloan.**

Colletti chose to combine business school and bootstrap experience—a combination that the business schools increasingly recommend. At Boston University's School of Management, associate professor Candida Brush urges students to stay and master the fundamentals: Whether a business exists in a suburban mall or an ethereal cyberspot, she says, it must have streams of revenue and an advantage over the competition that is not easily copied. (The entrepreneurs often give contradictory advice. "You are in school to find opportunities, so if one presents itself that's too good to turn down, you should strongly consider leaving," argues Jim Lanzone, 29, who nevertheless worked day and night to finish his joint J.D./M.B.A. degree at Emory while founding a company with two friends. Their business, eTour.com, a personalized Web-surfing guide, prefers to hire M.B.A.'s. "I learned much more in my first year at Akamai than I would have in my second year at Sloan," says Jonathan Seelig. Yet he adds, "I don't think I could have done the things I did in the last year without a year of B-school under my belt.")

Business schools are scrambling to accommodate budding moguls, both by adding to the curricula (Page 14) and by lending all sorts of logistical support. "I always wanted to be an entrepreneur, and here I learned how to take an idea, then use pricing and revenue models, marketing research, and competitive analysis to see if I had a viable business," says Mike Borek, 27. He switched to part time at the University of Maryland's Robert H. Smith School of Business so he could start CompareRepair.com, a Web site that allows car owners to rate quotes from repair shops. Frustrated house hunters Jeff Robinson and Natalie Williams tested their idea for MyHomePlan.com on the brain trust in their New Venture Creation class at the University of North Carolina's Kenan-Flagler Business School. The "go/no go" analysis of the company, which will allow prospective buyers to choose house plans and modify them, resulted in a resounding "go." This summer, after graduation, the company will seek venture funding.

The wealth on campus. "We're telling prospective students that a school like Tuck has more resources, more experts on any part of the business world you want to work in," says Paul Danos, dean of Tuck. When Martin Muendel, Phong Nguyen, and David Shapiro dreamed up a device that uses a new technology to track how far and fast a runner goes, experts at Tuck's John H. Foster Center for Private Equity coached the trio in making presentations to investors. The center also sent them to a business competition in England last year, where they won $15,000. A Tuck alumnus led them to one of their financial backers.

Tuck has opened a satellite office in Silicon Valley, where students can move with the Valley's movers and shakers, and the University of Michigan is considering doing the same. Babson College gives "hatchery" space and high-speed Internet connections to student entrepreneurs. Columbia University's $1 million Eugene Lang Entrepreneurial Initiative Fund invests up to $250,000 in student businesses. At the University of Maryland, the Dingman Center for Entrepreneurship connects students with mentors and venture capitalists.

Indeed, many students say there's still a simple reason for going to business school: That's where the money is. Professors gleefully recount stories of venture-capital firms stopping by B-school cocktail parties to pledge millions of dollars to students' projects. Akinyanmi and Hervey often meet venture capitalists at Sloan gatherings, but they decided to slow their fund-raising and get their degrees. "Sloan gave us a reality check about what we could actually do and what the competition is," Hervey says. As for Akinyanmi, he's looking forward to the day when he can use EnCabler's service: Between starting the company and finishing his classes, he has little time for channel-surfing. ●

The customized M.B.A.

Schools are tailoring executive education to fit employer needs

REID HORN FOR *USN&WR*

IN GOOD COMPANY. **Felicia James and her team examine real Texas Instruments issues as they earn an M.B.A.**

By Pamela Sherrid

Nike sells custom-made athletic shoes, Dell builds computers to order, and Procter & Gamble lets customers pick the scent, color, and packaging of its cosmetics. So is it any surprise that business schools have started customizing their M.B.A. programs to suit corporate America?

Consider the new degree offered by the University of Texas–Austin to executives of Dallas-based Texas Instruments. A few years ago, the president of the semiconductor maker decided that his middle managers, mostly hard-core engineers, needed more marketing and financial savvy. After talking to a number of business schools, the company entered into a deal with the University of Texas. In January 1999, a group of 49 company managers began taking courses every other Friday and Saturday from University of Texas business professors at a Dallas hotel.

The managers' core courses, in subjects such as finance and marketing, are similar to those offered to the university's regular students. But the TI employees don't get a choice of electives. All their advanced courses focus on matters particularly relevant in their workplace, such as how to design computer chips that the marketing folks will be able to sell and how to price and distribute them most effectively. Each summer of the two-year program, students team up to work on a real company problem. One recent example: how to improve communication with customers so that the chips designed for them actually meet their needs.

More for the money. Executive education has long been a big business, with top schools like Columbia and the University of Pennsylvania's Wharton School offering $90,000-plus M.B.A. and other advanced degrees to managers handpicked by their bosses. Many prestigious schools have not felt a need to begin catering to individual employers, but a number of institutions are eagerly responding to companies demanding more relevance for their money. There are perhaps a dozen tailored programs already in place, with others in the works. Babson College, which offers a master's in accounting to the employees of Lucent Technologies, is presently in talks with two other employers. The University of Georgia has teamed up with consulting giant PricewaterhouseCoopers; Kennesaw State is working with Bell-

South. "I like that it's not case studies just for the sake of case studies," says Felicia James, 39, a product development manager for Texas Instruments who is enrolled in the University of Texas program. One group of employees studying logistics, for example, suggested improved ways to handle the raw materials used in making semiconductors and has saved the company $5 million so far.

Customized delivery of a graduate program can be just as important to the employer—and as beneficial for the student—as tailored content. PricewaterhouseCoopers wanted to offer an M.B.A. program to up-and-coming employees of its management-consulting services group, who travel four or five days each workweek. But "having to be in town each weekend or a certain weekday evening just wouldn't work for them," says Don Burkhard, a director of the company's Learning and Professional Development Center. Burkhard came to an agreement with his own alma mater, Terry College of Business at the University of Georgia, to provide a two-year M.B.A. program to consultants that relies heavily on distance learning.

EXECUTIVE M.B.A. PROGRAMS

Rank/School	Duration (months)
1. Northwestern University (Kellogg) (IL)	20
2. University of Pennsylvania (Wharton)	23
3. University of Chicago	20
4. Duke University (Fuqua) (NC)	20
5. Columbia University (NY)	20
6. University of California–Los Angeles (Anderson)	24
7. New York University (Stern)	24
8. Emory University (Goizueta) (GA)	16
8. Washington University in St. Louis (Olin)	21
10. University of Texas–Austin	22
11. University of North Carolina–Chapel Hill (Kenan-Flagler)	20/24[1]
12. University of Southern California (Marshall)	24
12. Southern Methodist University (Cox) (TX)	21
14. University of Pittsburgh (Katz)	20
15. Case Western Reserve University (Weatherhead) (OH)	22

1. Weekend program/evening program
Note: Rankings based on reputational surveys of deans and M.B.A. program heads

Managers in a traditional program might be required to spend two full weekends a month in class for up to two years. But PricewaterhouseCoopers students log an initial two weeks at the Athens, Ga., campus and then return there for only four weekends a year. The rest of the coursework is handled by computer-based communication. In a given week, students might download two audio lectures with slides from the Internet, take a quiz by E-mail, and spend hours in chat-room discussion with the three or four other students on their "learning team." Exams can be taken anytime during the week. "That works just perfectly—I took a finance exam on a plane trip to Europe," says Roy Greco, a 33-year-old consultant based in Philadelphia.

These new arrangements do raise concerns, for business-school accrediting organizations as well as for prospective students. "We want to make sure a customized program is not just a cash cow" for the school, says Milton Blood, managing director of AACSB-The International Association for Management Education, which accredits graduate business degrees. Blood has two main concerns: that content might be watered down in the interest of bending to customer wishes and that too many classes might be taught by company executives and adjunct professors who are poor teachers.

The accreditors have visited only a few schools with a customized M.B.A. program so far, because the organization audits individual institutions only once every 10 years. So far, says Blood, the programs have shown no compromise in quality. "It's in the self-interest of schools to protect the value of all their degrees," Blood says. Program administrators argue that, if anything, business schools tend to use their premier talent in corporate programs. "They know the students are more discerning and that the contract won't be renewed if the program is bad," says David Poole, chairman of the Executive M.B.A. Council and head of executive degree programs at Pepperdine University in Culver City, Calif.

No networking. Even if the teaching and content are first rate, students in a corporate program may miss out on a more subtle benefit of the traditional approach: getting to know students from other companies and professional backgrounds. "If what I wanted from an M.B.A. was to broaden my network, I'd try not to go to a company program," says Blood.

But students may enjoy a different sort of diversity. "One of the biggest benefits has been exposing me to parts of Texas Instruments that I wouldn't get in my normal job," says Felicia James. She says the Texas professors do give the class a grounding in the problems and practices of other companies, and that the advantages of single-company classes outweigh the negatives. Students get to dig into company matters in class discussion without worrying about leaking any secrets to corporate outsiders, for example.

In this tight labor market, employers are drawn to the idea of strengthening a manager's ties to the company using a customized M.B.A. program; a traditional program, without the company focus, might just as easily loosen the tie by providing valuable contacts elsewhere. On the one hand, "even in this day of Me Inc., people are likely to feel a certain loyalty to the company that pays a $50,000 tuition bill," says Douglas Ready, president of the International Consortium for Executive Development Research.

On the other hand, an M.B.A. degree is a highly portable credential. Some companies, such as PricewaterhouseCoopers, make their retention aims explicit. Though most companies assume the cost of the employee's degree with no strings attached, PricewaterhouseCoopers consultants who leave within three years of getting a degree must assume responsibility for part of its cost. At a minimum, companies can expect to hold on to the employee until the program is over—between homework and the full-time job, who has time to look? ●

METHODOLOGY

The overall rankings for the nation's 325 accredited M.B.A. programs are based on a weighted average of the eight measures of academic quality described here. The specialty rankings are based solely on reputation. An overview of our methods appears on Page 11.

- **Reputation** (40 percent): Academic reputation was measured by two surveys conducted in the fall of 1999. Business school deans and directors of accredited M.B.A. programs were asked to rate the quality of M.B.A. programs from "marginal" (1) to "distinguished" (5). Fifty-five percent responded, and the resulting score accounts for 25 percent of the rank. Corporate recruiters who hire from previous top-ranked M.B.A. programs were asked to select the top 25 programs. Twenty-six percent responded, and their opinions account for 15 percent of the final rank.
- **Placement success** (35 percent): This is measured by mean starting salary and bonus (40 percent) and employment rates for 1999 graduates, computed at graduation (20 percent) and three months after graduation (40 percent). Employment rates exclude M.B.A.'s not seeking jobs. Salary figures are based on the number of graduates reporting data. Since not everyone who reported base salary received a signing bonus, mean signing bonus is weighted by the proportion who do.
- **Student selectivity** (25 percent): The strength of full-time M.B.A.'s entering in the fall of 1999 was measured by mean GMAT (65 percent), mean undergraduate GPA (30 percent), and the proportion of applicants accepted by the school (5 percent).
- **Overall rank:** Data were standardized, and standardized scores were weighted, totaled, and rescaled so that the top school received 100; other schools received their percentage of the top score.
- **Specialty rankings:** To rank specialties within M.B.A. programs, *U.S. News* asked business school deans and M.B.A. program heads to identify the 10 schools offering the best programs in each area. The 10 schools receiving the highest number of nominations appear in the tables. Each school verified its specialty offerings.

A sizzling market for M.B.A.'s

A growing number are heading for jobs in high technology

BY MIKE THARP AND MARY LORD

Justin Kitch, founder of Homestead.com, an online service that helps customers build their own Web sites, recently calculated that one year of real time is roughly equal to seven years of Internet time. "This means that while you are squandering two years in business school, someone else is already . . . implementing your big ideas," he wrote in a recent issue of the magazine *Business 2.0*. "Two years is equivalent to four complete redesigns, 18 product releases, 200 all-nighters, and more than 1,000 bowls of ramen."

While young techies weighing B-school against immediate opportunity might logically question the value of an M.B.A. (Page 19), placement officials and corporate hiring chiefs say demand for the credential is as robust as ever, in high technology as well as consulting and finance. "It's a great market for M.B.A.'s," says Ilse Evans, director of career services at the University of California–Berkeley's Haas School of Business, whose graduates typically enjoy multiple offers. Eighty percent of the second-year students at the University of Virginia returned to campus last fall with job offers already in hand, says the astonished B-school dean, Edward Snyder. So intense is the pressure on students to accept—many companies dangle "exploding" bonuses that disappear after a certain time—that the University of Chicago last fall sent a letter to employers insisting that M.B.A. students be allowed six weeks to mull an offer.

The pressure shows up in the size of pay packages, too. The median base salary of Stanford University's class of '99 was $87,500, up from $85,200 a year earlier, and median total compensation, including all bonuses, was about $120,000. At the University of Pennsylvania's Wharton School, median total compensation hit $159,000.

Justin Kitch may have a point. But the reality is that corporate America is hungry for managers with technical expertise *and* marketing, finance, and the know-how to motivate people. "Using the Wharton name opened an infinite number of doors," says Gary Orenstein, 31, who graduated in 1997 and is now director of marketing for Nishan Systems Inc., a start-up data networking company in San Jose, Calif. The number of Wharton grads entering venture capital firms more than doubled between 1998 and 1999, and 19 percent of the class of 2000 have accepted jobs with high-tech firms.

Sun Microsystems Inc. plans to hire 40 to 50 M.B.A.'s this spring to fill slots in finance, marketing, and operations—about the same number it has hired in each of the past several years, says John Featherstone, director of corporate employment. And "the biggest market" for tech-savvy M.B.A.'s now is the Fortune 500: companies like FedEx, GTE, and Citibank that are aggressively preparing to deal online with both consumers and suppliers, says Donna Hoffman, who created Vanderbilt University's E-commerce program five years ago. She saw 45 percent of last spring's graduates off to such large corporations.

With the recruiting of M.B.A.'s by high-tech firms at ionospheric levels, graduates who still hunt for old-fashioned consulting or investment banking jobs may find that they're at an advantage. "We definitely are feeling the competitive squeeze from dot-com and Internet [companies]," says Janemarie Maselli, director of management consulting services M.B.A. recruiting for PricewaterhouseCoopers. The firm will hire some 350 new graduates this year for its management consulting, financial advisory, and audit practices. The Big Five accounting and consulting firms are now offering starting pay of about $80,000 to $110,000 (with consultants at the high end), plus signing and incentive reward bonuses, and a relocation package. ●

THE WHARTON EDGE. Gary Orenstein's M.B.A. "opened doors" for him when he looked at technology firms.

Education

Former pilots, lobbyists, and lawyers are flooding into teaching

CHRIS USHER FOR *USN&WR* (2)

CHANGE OF HEART. **Jessica Kaplan left her lucrative career as a tax lawyer to train to become a schoolteacher.**

By Mary Lord

Wanted: versatile, energetic new K-12 teachers—220,000 of them a year. Candidates must have a bachelor's degree or higher and relish 70-hour workweeks. No office. B.Y.O. supplies. Average starting salary: $26,648.

The economy is sizzling. Employers can't keep talented workers for love or money. Who would consider a career in teaching, with its long hours and slim pay, let alone ditch a lucrative job to go back to school for a teaching certificate?

Jessica Kaplan, for one. The 33-year-old Californian once made serious money as a tax attorney. Today, she is happily slogging through the University of Southern Maine's Extended Teacher Education Program, a 10-month boot camp that plunges midcareer professionals straight into the classroom as apprentices to seasoned instructors. Law school was a breeze by comparison. "I'm broke," she cheerfully admits. "But I love what I'm doing."

She is not alone in her infatuation. According to a recent survey by the nonprofit National Center for Education Information in Washington, D.C., career switchers account for more than half the students admitted to post-baccalaureate teacher-training programs. "That's a major, major shift in a relatively short time," says President C. Emily Feistritzer, the report's author. And while undergraduate programs still supply the bulk of new teachers, graduate schools of education are gaining fast. Nearly 3 in 10 individuals who completed their teacher training in 1998 already had at least a bachelor's degree; 15 years earlier, that figure was just 3 percent.

Fueling this trend is the nation's much bruited teacher shortage—and the better pay, housing help, and even immigration visas with which school districts are wooing new instructors. Massachusetts's

$20,000 signing bonus, for example, "was definitely what pulled" financial consultant Camilla Parker into a Washington, D.C., recruiting reception last fall. But most midcareer professionals are drawn by "the chance to do meaningful work; they want to do something that really makes a difference," says Libby Hall, director of the Crystal City teaching partnership at George Washington University's Graduate School of Education and Human Development.

Spurred by this outpouring of interest, America's graduate schools of education have developed a host of options to ease the transition into the classroom. Two thirds of the 1,354 colleges and universities surveyed by Feistritzer, for example, now have at least one graduate teaching program for midcareer professionals.

Choosing a program from among the multitudes could vex the most experienced manager. But educators note that since most programs lead to state certification, it pays to look locally first. When Mike Weiss, a former Navy flier and member of the P-3 rescue crew described in the book *The Perfect Storm*, decided to retire in Maine, he quizzed several school superintendents as well as members of the state education board to see which programs produced their best teachers. That led him to USM's program and, subsequently, a job teaching high school science and math. He also got ideas, he says, from a referral service run by Troops to Teachers, which helps Department of Defense employees build second careers as teachers (*http://voled.doded.mil/dantes/ ttt/index.htm*).

Top-flight programs share several features. Chief among them:

Learn by doing. Rigorous programs quickly place their students in real schools, teaching real pupils. A wealth of research shows that the more time you spend in the classroom, the better equipped you are to inspire pupils and maintain control, says George Washington's Hall.

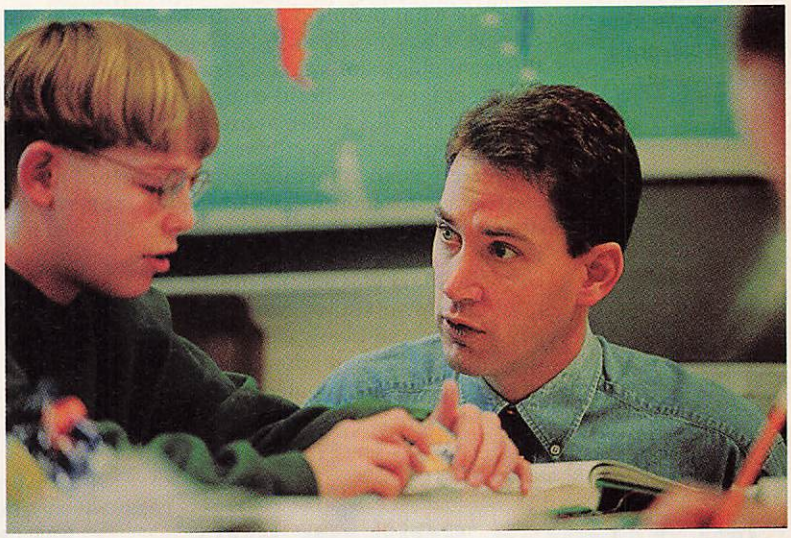
Close supervision. "The good programs often put people in classrooms right away—but not by themselves," cautions Stanford University education Prof. Linda Darling-Hammond, who heads the National Commission on Teaching and America's Future, a bipartisan panel of educators, politicians, and business leaders based at Columbia University Teachers College in New York. Look for tightly supervised internships, with lots of mentoring and courses in pedagogy and child psychology that correspond closely to what takes place in school. USM, for example, puts career switchers under the tutelage of a veteran teacher, and requires participating schools to dedicate one other teacher to mentoring students and coordinating administrative details with USM. Faculty members also visit frequently to observe and critique apprentices' performance.

Extensive curriculum. Swelling school-age populations and efforts to reduce class size have given rise to emergency licensing programs in many states. These quickie courses can run from a few days to a few weeks. Massachusetts, for instance, puts promising college graduates and midcareer professionals through a seven-week summer course that includes a short teaching stint. But Stanford's Darling-Hammond, who has done comparative studies, says crash courses often lack academic rigor and fail to provide students with sufficient mentoring. As a result, up to half the initiates leave the profession within a year. Nine months is the minimum, she says, to absorb key lessons in classroom-management and education theory.

For those who want comprehensive training but can't afford to devote one or two years to graduate school, there are a variety of part-time options. Former California lobbyist-turned-substitute-teacher John Kidder, 59, wanted to hone his teaching skills and get a master's degree. He recalls scouring course catalogs and thinking, "All I have to do is *not* work for six months! I mean, hello?" Then, last summer, he heard about a new, part-time, 18-month program at California State University that would let him keep his day job and take courses over the Internet. Total cost: $5,000. "It's a lot of work, and I'm not a young man anymore," says Kidder, who struggled through two nights a week of math for elementary school teachers this fall. "But I needed to be refreshed."

Diversity training. For many midcareer professionals, an important part of teacher preparation is learning how to reach students from a variety of backgrounds. According to the Department of Education's most recent survey, minorities make up over one third of students enrolled in public elementary and secondary schools, up from about one quarter two decades earlier. To broaden perspectives, Project Promise, a teacher-preparation program for midcareer professionals at Colorado State University, includes a three-week "diversity institute." Students live with rural families and spend a week in inner-city Denver, using public transportation, shopping at local grocery stores, and observing teachers. "It's a 24/7 kind of immersion, and it changes your life," says Director Barbara McWhorter, noting that many students have never worked with, let alone taught, people of color.

By all accounts, career switchers who complete a top program prove their worth in the classroom. "I



NEW LAUGH LINES. John Heffernan frequently dips into his past as a stand-up comic to engage his sixth-grade pupils.

ED KASHI FOR *USN&WR*

INTERNET OPTION. **Substitute teacher John Kidder is pursuing his master's online with California State University.**

never encourage people to turn their back on what they've been doing for the last 25 years, but to draw from it," says George Washington's Hall. "So much of what people have done in their previous careers is terrifically useful in teaching." She cites the technology skills that a former computer programmer for a restaurant chain brings to his classroom or the old sonar printouts that a retired oceanographer uses to illustrate a physics lesson. John Heffernan, a former sports reporter turned sixth-grade teacher in Gorham, Maine, sometimes dips into his past as a standup comic to enliven a lesson. To inspire one class, for example, he donned Groucho Marx glasses and mustache and posed as mad "Dr. Mindstein." Kids who normally didn't pay attention suddenly were engaged. "It made my day," says Heffernan, who sees "a lot of parallels between teaching and comedy."

Life experience pays off in other ways: Former carpenters, engineers, and managers often can relate to parents more effectively than can young instructors. "I can talk to you in a language you can relate to," says science and math teacher Mike Weiss. "I've got kids, so I can talk to you about raising kids." Many also are better at keeping their cool than their more fresh-faced colleagues. Weiss, the former Navy flier, notes that managing 20 kids is "a lot easier" than was his previous job. "I've almost crashed, I've had people shoot at me—I'm not worried about dying in here," he says, pointing to his classroom.

Prized commodity. Such strengths have made career switchers so prized a commodity that some school districts are recruiting them as interns. Even in competitive areas like Portland, where each teaching slot might draw 150 applicants, graduates of USM's program go to the top of the pile: Last year, 78 percent of the students had full-time teaching jobs at graduation. Other program directors report similar demand. Schools approach Project Promise for candidates before advertising for a teacher, for instance. Administrators ring George Washington's Crystal City program asking, "Is there anyone you can send us?" reports Director Hall.

Just as the influx of career switchers has changed teacher education to include more hands-on learning, their growing presence in schools could eventually alter the way teachers are treated outside the classroom. Says Barnett Berry, director of the Southeast Center for Teaching Quality in Atlanta, these new recruits could change things as they start to demand some of the amenities they used to enjoy on the job, like ready access to telephones. Of course, it may take a while for salaries to catch up to those in today's high-octane fields. But, as professionals like Jessica Kaplan believe, money isn't always the point of the exercise. ●

WHAT SCHOOLS WANT

No. 1 trait: a 'soul for kids'

Teacher-preparation programs seek applicants with a variety of qualities, but the one that tops the list, says University of Southern Maine administrator Carol Lynn Davis, is "a passion about working with children and youths." Agrees Barbara McWhorter, director of Colorado State University's Project Promise teacher-education program, "I work hard to discern if they have a soul for kids, particularly adolescents. That's No. 1." She interviews each candidate about such activities as coaching soccer, tutoring, leading church groups, or other activities with kids.

Schools also look for applicants who can think creatively on their feet, changing a lesson plan when pupils grow perplexed or bored. Candidates who can learn from their classroom experiences are particularly sought after. "Reflection is a big thing for us," notes Davis, who asks applicants to describe a challenging situation and what they took away from it.

High energy. Moreover, applicants must demonstrate an ability to communicate clearly, both orally and in writing. High energy levels don't hurt either. Explains USM grad John Heffernan, "[The program] can be very draining. You work 12 hours, go to bed exhausted, wake up tired, and [then] try to be on and have energy for 22 kids."

Most schools ask for a college transcript and favor candidates with at least a 3.0 grade point average. However, great grades are less important than an overall ability to engage kids.

Good programs are very selective. USM, for example, had 160 applicants for 60 slots in this year's program. Project Promise fields 70 to 80 applications annually for 16 to 20 slots.

Such winnowing pays off for children and society. Graduates of rigorous training programs are not only apt to stay in teaching; they are likely to gravitate to rural or inner-city schools, where the teacher shortage is most severe. One in five, for example, wants to teach in inner cities, versus just 4 percent of grads of short programs. *–M. L.*

Choosing the inner city

A few master's programs prepare teachers for work in urban schools

BY CAROLYN KLEINER

Noah Lippe-Klein's students are staring at him like he's insane. The high school history teacher has just snatched one of his charge's backpacks; now he pulls a Walkman out of the bag and starts playing music; now he takes out a brush and runs it through his hair. "You stole that backpack," shout his 38 students. "You jacked it." Lippe-Klein pauses a moment and asks, "Well, what would you say if I said I *discovered* the backpack, and now it's mine?" Slowly, it begins to dawn on these teens that their instructor is making a point. Today's lesson will be about Christopher Columbus and his "discovery" of the Americas.

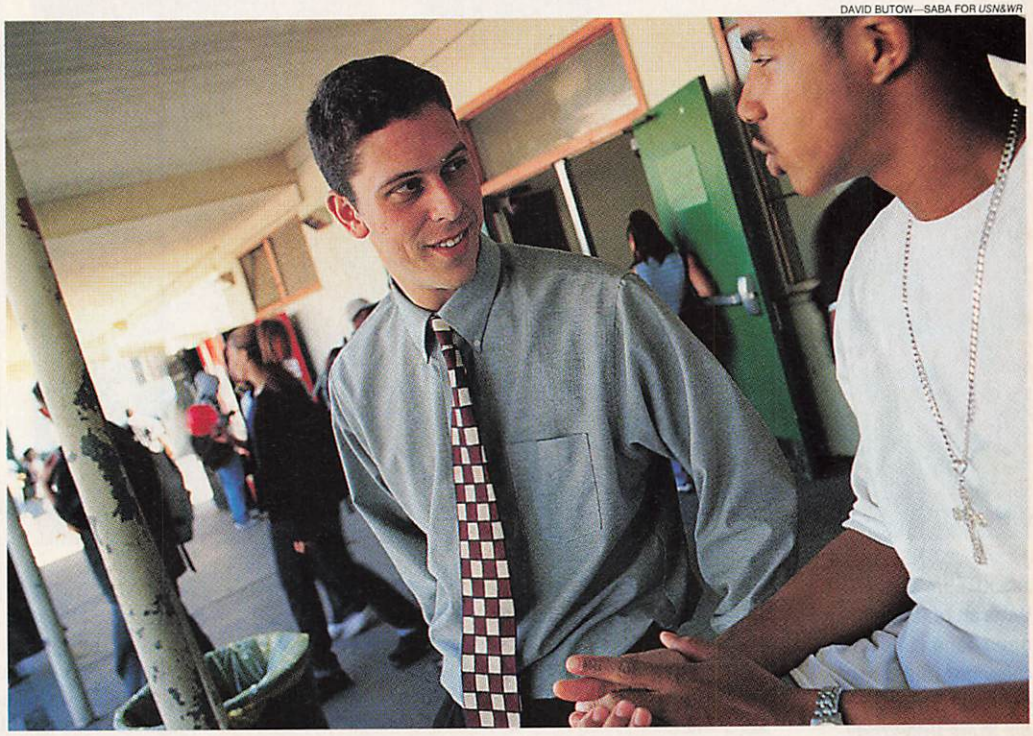
Dorsey High School in Los Angeles is a typical urban public institution, where nearly 100 percent of students are members of a minority group, 66 percent qualify for free or reduced-price lunch, around a third speak English as a second language, and just 40 percent go on to four-year colleges. There often aren't enough desks or textbooks to go around. Engaging a class in this enviroment—not to mention getting students to learn—can be a considerable challenge for teachers, but Lippe-Klein is thriving in his first year on the job. He credits the University of California–Los Angeles's two-year Teacher Education Program, one of a handful of certification and master's programs that prepare students to work at—and funnel them into—low-income city schools. "If I were just thrown into an urban school—without the time and the support from peers and professors to push me to understand how poverty and unequal funding impact learning environments—I might have begun to blame students for their situations," says Lippe-Klein, 24. "And that is wrong."

High turnover. Urban schools are in desperate need of similarly minded instructors. Of the estimated 2.2 million teaching jobs that must be filled in the next decade, more than 700,000 will be located in high-poverty school districts, where tremendously difficult working conditions make hiring hard and quick departures all too common. In fact, as many as half of all new teachers leave inner-city jobs within three years, compared with 22 percent nationally. "These are the places where the largest percentage of our students will be educated in the future," says Terry Knecht Dozier, senior adviser on teaching to the U.S. secretary of education. "Yet [they are] the very schools that get the least-qualified teachers."

Schools of education are slowly stepping up to the challenge. The best programs, including those at UCLA and similar offerings at Northeastern University in Boston, the University of Wisconsin–Milwaukee, and Trinity University in San Antonio, start with a basic premise: that *all* children can learn and succeed. Would-be instructors typically take up to a year of courses that focus on the unique issues they'll confront in urban schools, from racial and cultural diversity and immigrant families that don't speak English to poverty and hunger. They also participate in a series of inner-city teaching experiences, working with university professors and current schoolteachers to connect theory to practice.

Lippe-Klein, for instance, spent last year studying African-American culture, the methods of teaching history, and how government policies and poverty affect student achievement, among other subjects.

DAVID BUTOW—SABA FOR *USN&WR*



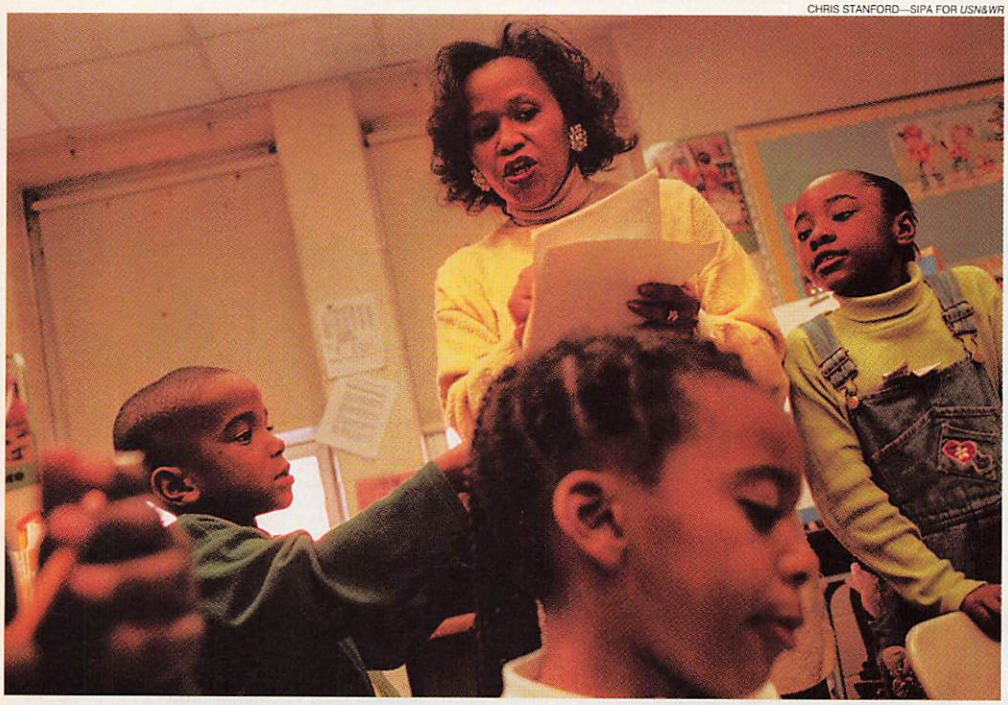
STUDENT TEACHER. **UCLA student Noah Lippe-Klein is learning to teach where he's needed most, in the inner city.**

He's now teaching 10th- and 11th-grade U.S. and world history at Dorsey as a UCLA "resident," which means he's not alone: Lippe-Klein and the two other UCLA residents at Dorsey are visited every two weeks by a university field supervisor for feedback. They also meet weekly with expert teachers, one on one, to discuss lesson plans and teaching techniques and to dissect classroom discipline problems. Student-teachers also attend a weekly seminar on campus, where they read and discuss theories and share their school experiences.

The UCLA students take three classes to prepare for working with children learning English as a second language—including one that explores how being Asian or Latino, say, affects the way students experience schools. In methods courses, they question traditional instruction procedures such as straight lectures and multiple-choice tests and develop strategies more apt to reach minority and ESL students. In one class, for example, would-be elementary school teachers learn a new technique for helping youngsters who are used to an oral tradition learn to read: A child tells a story out loud and watches it being written down by an adult, gaining a sense of how the spoken word translates into a different medium. Literature with a cultural emphasis, such as *Africa Dream*, a children's book by Eloise Greenfield, is standard fare.

It's clear that the best way to learn about urban schools is to spend time in them. Top programs place teacher candidates in inner-city institutions from the get-go and continue to support them through a year-long residency or internship. However, experts say it's equally important for teacher candidates to get out into surrounding communities—and to campaign for urban-school reform. "We don't want our graduates to be people who simply walk through the door and teach their subject," says James Fraser, dean of the school of education at Northeastern, which reopened this fall with a new focus on urban education. "We want them to feel allied with parents and community groups and to fight for change." Thus, students begin their training by working some 30 hours at a local community agency, such as the Urban League or a nearby housing development's after-school program. At UCLA, all teacher candidates must complete profiles of "social justice fellows" who are actually making a difference in local schools and neighborhoods—people like Lois Lee, a sociologist who started "Children of the Night," a program for young runaways in Los Angeles.

CHRIS STANFORD—SIPA FOR *USN&WR*



A SHOT IN THE ARM. **Veteran teacher Marionne Jones has been reinvigorated by her coursework at Georgia State University.**

Mid-career boost. Because the urban classroom is so demanding, a number of schools, including Temple University in Philadelphia and Georgia State University in Atlanta, have introduced part-time master's programs aimed at better equipping working inner-city teachers. The Master's of Science in Urban Education degree at Florida International University, for example, was created specifically for teachers in the local Miami-Dade County public schools. As part of the program, students must identify a problem in their schools, put a solution in place, and then evaluate the process and outcome. For example, one teacher developed parent-education workshops to address the issue of homework completion.

"I've always loved teaching, always loved my students, but I was getting frustrated with the situation," says Marionne Jones, 43, an 11-year teaching veteran currently working with first graders at D.H. Stanton Elementary School in Atlanta, where she's had a hard time dealing with a widespread lack of parental involvement. She recently completed Georgia State's Master in Urban Teacher Leadership program, and says it has changed the way she feels about her job—and vastly improved her performance. "I understand my kids better," she says. "I know that their environment is no indication of what their capabilities are. I make sure they're aware of their heritage now, that they know that they're important."

Back at Dorsey High, there are larger lessons to be learned. Still clutching his student's backpack, Noah Lippe-Klein presses his mostly black and Latino students to dissect the myth of Columbus, engaging them in a discussion of genocide and the roots of racism. "My students are brilliant, wonderful, and exciting individuals to be around," says Lippe-Klein, who attended a top public high school in California, graduated from Amherst College, and believes that every child ought to have the same opportunities. "They deserve the best education in the world." ●

METHODOLOGY

The rankings of the nation's 187 graduate education programs are based on a weighted average of the 14 measures of quality described here. Specialty rankings are based on reputation. For more on methods, see Page 11.

- **Reputation** (40 percent): Academic reputation was measured by two surveys conducted in the fall of 1999. Education school deans and associate deans were asked to rate the reputation of graduate education programs from "marginal" (1) to "distinguished" (5). Fifty-five percent responded; the score accounts for 25 percent of a school's rank. School superintendents in a sampling of districts with at least 5,000 students were asked to select the 25 best programs. Thirty percent responded; their opinions account for 15 percent of the rank.
- **Student selectivity** (20 percent): Students who enrolled in fall 1999 were assessed using mean verbal, analytical, and quantitative GRE scores (30 percent each) and the proportion of applicants accepted (10 percent).
- **Faculty resources** (20 percent): The 1999 ratios of full-time Ph.D. and master's candidates to full-time faculty (25 and 20 percent of this measure); the percent of faculty awarded Spencer Foundation-Young Faculty, Fulbright, Guggenheim, Humboldt, or American Education Research fellowships in the past two years (20 percent); the number of doctoral (15 percent) and master's (10 percent) degrees granted in the past school year; and the proportion of fall 1999 students who were Ph.D. candidates (10 percent).
- **Research activity** (20 percent): *U.S. News* uses both total research expenditures (75 percent) and expenditures per faculty member (25 percent). Expenditures refer to separately funded research, public and private, conducted by the school, averaged over fiscal years 1998 and 1999.
- **Overall rank:** Data were standardized, and standardized scores were weighted, totaled, and rescaled so that the top school received 100; other schools received their percentage of the top score.
- **Specialty rankings:** Education school deans identified 10 schools with the best programs in each area. Those with the most nominations appear. Schools verified their offerings.

Special-ed teachers in demand

School districts are offering prospective hires an array of sweeteners

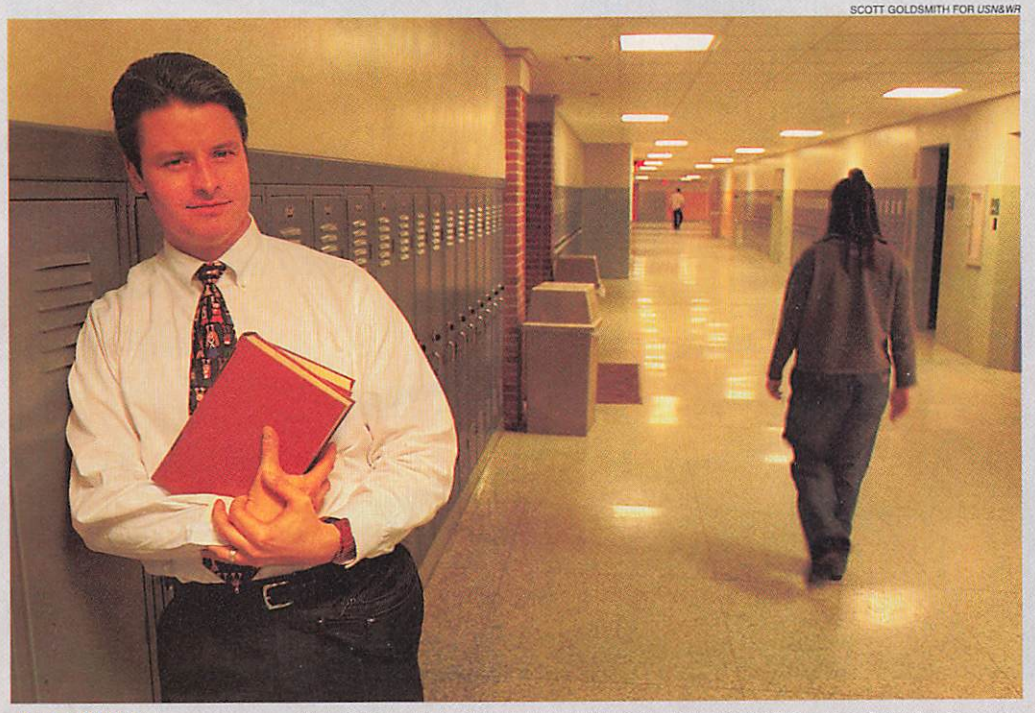
By Beth Brophy

With the U.S. Department of Education forecasting that more than 2 million additional K-12 teachers will be needed over the next decade, the elementary- and secondary-school job market is getting ever more hot. One of the specialties where shortages are already severe is special education. "With so many jobs to fill, we start recruiting efforts early, and our efforts are ongoing," says Cheryl Salyards, assistant superintendent for educational support services at Cypress-Fairbanks Independent School District in Houston. With 12 special-ed positions still open more than midway through the school year, her district is offering special-ed teachers a $1,000 to $2,000 annual bonus over and above the $32,000 salary it pays teachers with master's degrees.

The supply of special-ed teachers has been tight for two decades. But the shortage is growing worse, says B. J. Bryant, executive director of the American Association for Employment in Education, a school staffing organization based in Evanston, Ill. According to the Education Department, there are about 4,000 unfilled positions nationwide. The states with the most vacancies are in the South; they include Florida, Texas, Georgia, and North and South Carolina.

Several factors account for the drought in special-ed teachers. First, the number of students classified as needing special ed jumped 17 percent between 1991 and 1996, thanks to better screening and diagnosis and the extension of special-ed services to students with a broader range of problems, says Segun Eubanks, a senior professional associate for teaching and learning at the National Education Association in Washington, D.C. Students categorized as needing special ed include those with hearing and sight problems, emotional and behavioral disorders, and attention deficit disorder. Currently, about 12.5 percent of the K-12 population, or 5.6 million students, are in special-ed classes.

SCOTT GOLDSMITH FOR *USN&WR*



JOB CHANGE. Former army officer Chris Picha teaches emotionally disturbed high school students.

Burnout. The job also has a high burnout rate. After three to five years in special ed, thousands of teachers opt for regular classrooms or leave the profession entirely. "The job is extremely taxing, physically and mentally, and students can be physically abusive," says Eubanks. Further, these teachers often feel more isolated than regular K-12 teachers since there may be only one or two special-ed teachers per school.

The dearth of qualified special-ed teachers has led several states to create programs that put people in the classroom before they've earned their teaching certificates. North Carolina, for instance, gives emergency certification and a teaching job to college graduates with degrees in related fields, such as social work. These teachers must register at a university and take six to 12 hours of classes each year toward a special-ed certificate, which, at this part-time rate, takes about three years to earn.

The Defense Department has a program that helps former military personnel with bachelor's degrees get teaching jobs while earning their certificates. Chris Picha, an Army officer for eight years, is enrolled in a master's of education program at Ohio State University in Columbus. He teaches emotionally disturbed high school students and attends night classes. He's committed to his work, although he finds it stressful. On school days he routinely works 12 or more hours and often uses weekends for paperwork or home visits.

Many school districts are offering sweeteners to prospective hires. In Los Angeles, teachers receive a yearly bonus of $4,000 as long as they teach special ed. And in the Dallas–Fort Worth area, districts have hired real-estate agents to help new hires find housing. These measures illustrate the strong demand for qualified candidates—a need that will only increase. ●

Engineering

Schools build a new breed of professional—from the ground up

DAVID BUTOW—SABA FOR *USN&WR*

HUMAN TOUCH. **Stanford engineering students join forces on a Habitat for Humanity project in Redwood City, Calif.**

By Susan Gregory Thomas

Like many engineers, 30-year-old Rocco Paduano had always specialized in one area—in his case, it was aerospace engineering. He was trained in the field as an undergraduate, then as a graduate student at Worcester Polytechnic in Massachusetts. And at every job he took after earning his master's in 1993, from designing tunnels to missiles, Paduano focused on his area of expertise. But after he was passed up for a promotion just over a year ago, he had an epiphany. "As a traditionally trained engineer, I couldn't see the big picture at the companies I was working for," he says. "I realized I needed to be more well-rounded; I needed management, business, and communications skills to get ahead." So, Paduano went back to graduate school—and not for an M.B.A. He enrolled in the Massachusetts Institute of Technology's four-year-old System Design and Management program at the School of Engineering and the Sloan School of Management.

Major redesign. Well-rounded and engineering school? Until recently, it would have seemed laughable to link the two phrases. Indeed, engineers pursuing advanced degrees have always had to specialize, taking classes in ever more-rarefied branches of the engineering staples—math, chemistry, and physics. But over the past several years, the academy has seen something of a revolution. Graduate programs once reputed to turn out antisocial brainiacs now offer a wide range of cross-curricular courses in areas such as business management, communications, and medicine. Some classes even encourage social responsibility. The goal is to train an entirely new breed of renaissance engineer.

One major reason for the change is simply that companies demand it. "We want engineers who have good analysis and synthesis skills and who are able to communicate with customers, as well as other engineers," says Larry Burns, a Ph.D. a vice president at General Motors. "You can have great ideas, but if you can't communicate them effectively, they don't matter." Indeed, General Motors needs such engineers so desperately that it sends teams of recruiters to graduate programs that teach their engineers how to design marketing and customer-service campaigns as handily as automotive systems.

Burns and other corporate engineers say that underlying this change in need is a radical shift in the very concept of engineering. To function effectively today, engineers must understand the whole system they work with, not just a few pieces of it. For example, for computer scientists to design products that are both technically sound and user friendly, it is critical that they understand the consumer market and the problems faced by those users who have little or no knowledge of computers. Similarly, civil engineers designing new bridges must know enough computer science to be able to build into their plans electronic sensors for monitoring the structures' stability.

"It used to be that engineers were hired to build on a particular piece of a product. But now that companies are organized by teams, engineers are a part of the entire development, design, and marketing process," explains William A. Wulf, president of the National Academy of Engineering, a nonprofit organization based in Washington, D.C., that advises the federal government on engineering issues. "It's essential that engineers understand the context of their work, and universities are now beginning to understand this."

Some universities have long grasped the importance of broadening their engineering curricula. But until recently they were hamstrung by the Accreditation Board for Engineering and Technology (ABET)—the standards group responsible for ensuring the educational quality of American programs. ABET required that students take so many traditional engineering courses that it was all but impossible for graduate programs to offer them much besides the circumscribed essentials. As of this year, however, ABET allows schools to define their own educational goals and curricula, so long as they submit to an annual audit, which evaluates a school's success at achieving its goals.

One way universities are responding to the accrediting changes is by decoupling their master's and doctoral programs. "Getting a master's used to be a steppingstone to, or consolation prize instead of, the Ph.D.," says David C. Chang, president of Polytechnic University, based in Brooklyn, N.Y. "As we move forward, the master's degree in engineering will be considered the primary professional degree in the field."

Total immersion. Some universities prepare students for the business world by pushing them in head first. "Because of our location, we have many opportunities to develop relationships with businesses, and that means our students can do applied research," says Polytechnic civil-engineering professor Magued Iskander. "They work on real jobs, conduct research, and get paid for it." Iskander's students, for example, have been contracted by the Empire State Development Corp. to reinforce Manhattan's eroding Chelsea piers with supports made from recycled plastics.

Polytechnic is also beginning to specialize in helping its graduate students—many of whom are in their 30s and 40s—update their work skills for the dot-com economy. In its E-business courses, for example, students learn not just how to code in the Web-based programming language du jour but also how to write a business plan, wangle financing from venture capitalists, and deliver a bang-up Power Point presentation to equity research analysts.

The school's focus on the Web economy was perfect for Gail Welch, a 39-year-old programmer eager to learn about business administration so she could land a job at a high-tech start-up. "M.B.A. programs

CHRIS ANDERSON—AURORA FOR *USN&WR*

RENAISSANCE MAN. **Rocco Paduano went back to school after realizing he needed business skills to get ahead professionally.**

will teach you how to write a business plan and get financing, but they don't focus on technology firms," she says. "And those courses that do focus on the technology industry are designed to give nontechnical people an overview of the tech stuff—which I don't need." Welch says that at Polytechnic she got just the right balance of basic business mechanics together with today's popular programming languages. Plus, in her E-business entrepreneurship class, she was given the opportunity to practice the subtle art of social networking. "As a programmer, you tend to get isolated," she says. "At school, I learned how to wear lots of different hats." Welch's newfound flexibility has paid off handsomely. She has landed a job as a Web developer at Connecticut-based Mazescape (an online corporate-recruiting firm), where she is as likely to schmooze with prospective clients as she is to upgrade the office's computer network.

EVAN KAFKA FOR *USN&WR*

NEW BASICS. **Graduate students at Polytechnic University learn about managing design projects—on the job.**

Tough assignment. Other schools have focused on encouraging their students to think "outside the box" by having them work together in teams. This approach is at the heart of MIT's System Design and Management graduate program. Its core curriculum aims to teach engineers how to design products more efficiently and less expensively by brainstorming with colleagues in different fields.

This isn't necessarily easy for the average SDM student, who is 35 years old and has about 10 years of work experience. Now in his second year, Paduano recalls the first time he was required to work in a team on an assignment. The task was building a Mars Pathfinder type of vehicle. "We had such different backgrounds, and none of us had ever had to solve such difficult technical problems in a group," he says. "The software programmer had to work with the mechanical engineer, who had to work with the electrical engineer. It was a real wake-up call as to how difficult it is to take a number of different disciplines, throw them into a room, and get them to work together seamlessly."

Still other schools stress interdisciplinary studies. At Stanford University School of Engineering, one of the hottest new programs is biomedical engineering. Mechanical engineering Prof. Tom Andriacchi is leading the movement to reimagine the curriculum to prepare grad students for jobs in which they'll need to be almost as expert in medicine as they are in engineering. The first Stanford academician to receive a joint appointment with the medical and engineering schools, Andriacchi specializes in sports medicine and prosthetics. In his course on biomechanical engineering, he requires students to tackle fields that they traditionally would not have studied, including biology, physiology, and anatomy—but through an engineering lens. For example, he encourages students to use the mathematics and physics they already know to build models that will predict medical events like knee injuries, instead of observing them the way a biologist might.

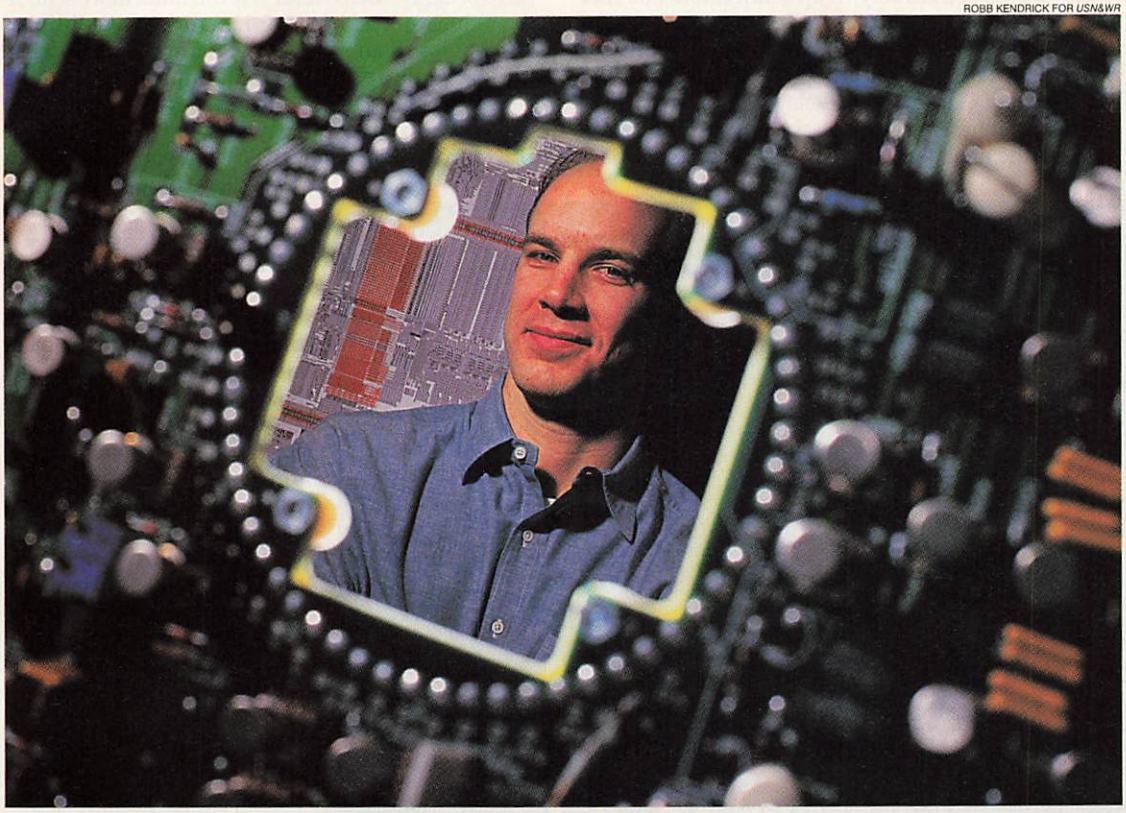
But real-world experience is required coursework, too. Andriacchi pries his students away from their high-concept aeries and puts them in hospitals, where they accompany residents on their rounds to get a feel for the way clinicians work. And in a hospital lab, students can collect data from knee-injury patients that reveal how medical equipment used in knee-injury physical therapy is affecting healing. Andriacchi also ensures that students talk to patients. It's vital, he says, "to see patients, follow them into surgery, test them, and interact with them. This [gives] the team of engineer and physician an unprecedented understanding of how the design and use of medical devices can be improved."

Of course, there are other benefits to learning to talk with regular folks on the job. Stanford civil and environmental engineering Prof. Boyd Paulson always takes his classes to a Habitat for Humanity site in the Bay Area, where students help build low-cost housing for needy families. "One of my main goals is to show the students that their engineering talents can be used in community service, especially foreign students to whom the practice of American volunteerism is new," explains Paulson. The best reward, he says, is that alumni are coming back to help—a tradition, if it continues, that will do more to alter the public's view of engineers than any changes in university classrooms. ●

Should you go back to school?

An advanced degree still makes sense for many young engineers

ROBB KENDRICK FOR *USN&WR*



SPECIAL INTEREST. **Mike Fillipo decided to pursue a master's after realizing he wanted to design microprocessors.**

By Ted Gest

If you want to succeed in engineering, earn an advanced degree—the sooner the better. For decades, deans and professors have drummed that message into the minds of undergraduates. But does their advice still hold true? With all the tales circulating of fresh-faced dot-com millionaires and new engineers with only bachelor's degrees garnering sky-high starting salaries, students are wondering whether they should spend valuable years earning a master's degree or a Ph.D. "The job market is very good," says Ben Liblit, who worked in California as a software engineer after graduating from Pennsylvania State University in 1993. "It's alluring to think you can make a million dollars and retire at 40."

The employment boom in information technology and computer sciences has indeed altered the job-versus-school equation for some young engineers—although not for as many as the deluge of stories would suggest. The educators' counsel still makes sense for most grads in more traditional fields like electrical or mechanical engineering, however. Especially for those who aim high, the question should not be whether to get an advanced degree, but which one.

Even the problem of which degree is easily solved if you are reaching for a university teaching job: "If your end goal is academia, you must get a Ph.D.," says Linda Parker, who tracks engineering education for the National Science Foundation.

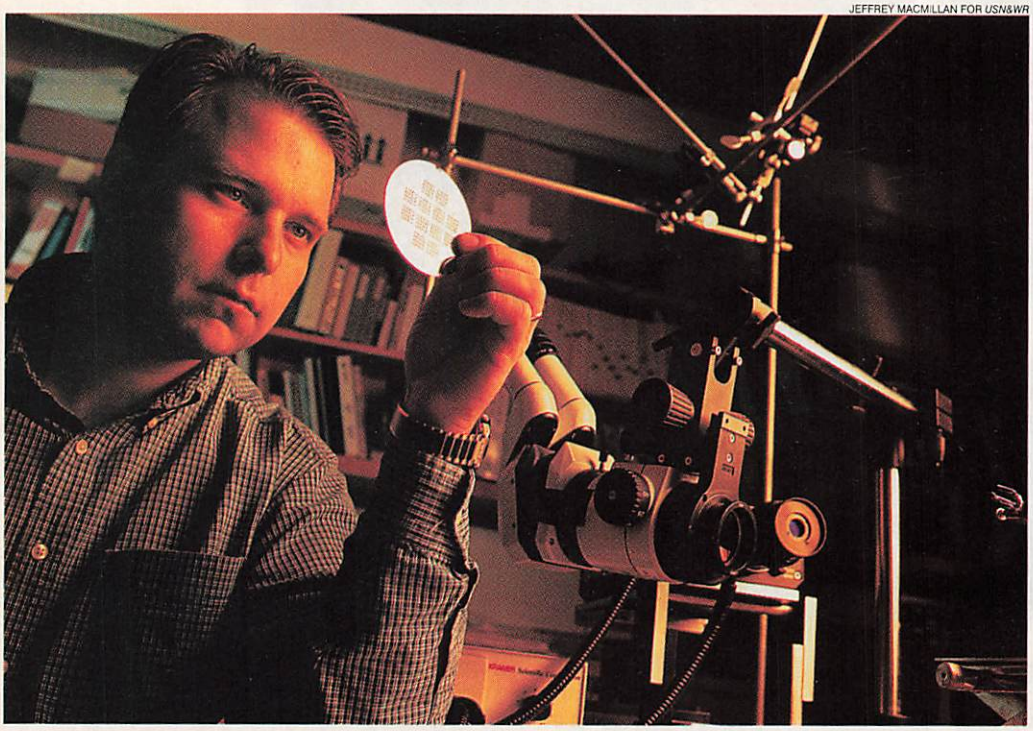
More is better. For those whose objective is a top management post, especially at a big, established company, the rules are not set in stone. But it generally helps to have a degree beyond the bachelor's, whether a Ph.D., a master's in an engineering field, or an M.B.A. These diplomas don't always give you an edge in the competition for promotions, but, on average, the more education you have, the more you earn. The median salary for engineers with doctorates is about $75,000; those with master's and bachelor's degrees earn $65,000 and $56,000, respectively, says the NSF.

Matthew Aubrey recognized the worth of a higher-level degree during the three years he worked for Eastman Kodak in Rochester, N.Y. Now the 30-year-old is in a Ph.D. program at Binghamton University studying acoustical sensors. Aubrey is not assured

of being rehired by Kodak when he completes his degree, but he's convinced that going back to school was the right choice. Most of the directors of Kodak's laboratories have Ph.D.'s, he explains. "[I realized] that if I wanted to go further up the ranks, I needed one, too."

Master's degrees, too, can help you get that first job and win raises later. In fact, some educators contend that, particularly in specialized areas like civil and nuclear engineering, a master's is essential to landing entry-level jobs that have advancement potential. Indeed, engineering Dean Paul Gray of the University of California–Berkeley believes that a five-year combined bachelor's-master's eventually may replace the bachelor's as the field's basic qualification, much like the M.B.A. has become the must-have degree for those seeking responsible jobs in business.

JEFFREY MACMILLAN FOR *USN&WR*



LOOK UP. **Ph.D. candidate Matthew Aubrey notes that most of Eastman Kodak's laboratory directors have earned Ph.D.'s.**

An IT exception? Assessing the advantages and drawbacks of an advanced degree is trickiest for engineers in the field of information technology. Because the success of many start-ups depends as much on marketing concepts as on specialized technologies, advanced education, especially for entry-level jobs, is not always a must. "We need people to help build products at a fast pace; a base level of education usually is good enough," says lab director Frank Canova of Palm Inc. in Santa Clara, Calif. His view is echoed by Kim Orumchian, cofounder of fatbrain.com, an online bookseller to corporations, who says he looks for "general intelligence, judgment, and problem-solving ability" in job candidates. Those with only academic experience, he says, "haven't delivered commercial products."

Still, even in the less structured information industry, specialized knowledge and degrees can give individuals a crucial leg up in the struggle for higher-level jobs. Palm's Canova notes that an advanced physics degree helped one applicant win a good position at his company as a designer of liquid crystal displays.

If you're going to pursue a higher-level degree, when is the best time to do so? First choose your career specialty; then decide if it warrants more schooling, educators advise. For instance, Mike Filippo, 28, developed an interest in microprocessors as an undergraduate in electrical engineering at the University of Oklahoma. He knew that he would need a master's to snag a good job, so he headed to Rice University. "You can't cover what you need in four years," says Filippo, now a designer at Advanced Micro Devices in Austin, Texas.

Those who choose to work a few years before going back to school may be able to get their employer to foot part or all of the bill. Tushar Porwal, 26, worked half time at General Motors as part of an undergraduate "co-op" plan, before joining the company full time. After two years, GM agreed to pay his way in a joint master's-M.B.A. program at the University of Michigan. Work experience with big projects "gives you confidence and turns the classroom into a more active learning experience," he says.

Many working engineers eventually discover a cheaper, less strenuous alternative to earning an advanced degree and that's studying for a "certificate" in an engineering specialty. These typically require students to take just a few courses. Some 7,000 individuals at the University of California–San Diego are pursuing certificates in engineering or computer science, compared with the 500 seeking advanced degrees. Satisfied UC-San Diego certificate-holders include Mark Flower, a senior manager at a local company that manages other firms' biotech projects. He currently is paying for nine employees to get certificates, at an average cost of under $2,000. "We're selling their knowledge base to clients," he says.

Regardless of how many degrees engineers possess, their ultimate challenge is keeping current, whether they go back to school, enroll in a distance-education program, or get on-the-job training. Continuing-education opportunities are proliferating quickly; this year the American Society for Engineering Education's Web site (*www.learnon.org*) will list more than 10,000 available courses. Says Executive Director Frank Huband, "There's not a successful engineer who doesn't continue to learn." ●

METHODOLOGY

The rankings of the nation's 219 graduate engineering programs are based on a weighted average of the 12 measures of academic quality described here. The specialty rankings are based on reputation. For more on our methods, see Page 11.

- **Reputation** (40 percent): Two surveys were conducted in the fall of 1999. Engineering school deans and deans of academic affairs were asked to rate the quality of programs from "marginal" (1) to "distinguished" (5); 52 percent responded. The resulting score accounts for 25 percent of the rank. Corporate recruiters were asked to select the 25 best graduate engineering programs; 24 percent responded. Results account for 15 percent of the final rank.
- **Student selectivity** (10 percent): Students who enrolled in fall 1999 were assessed using mean GRE quantitative and analytic scores (45 percent each) and the proportion of applicants accepted (10 percent).
- **Faculty resources** (25 percent): This measure consists of the 1999 ratio of full-time Ph.D. candidates to full-time faculty (25 percent of this measure); the proportion of full-time faculty who were members of the National Academy of Engineering in 1999 (25 percent); the number of Ph.D. degrees granted in the last school year (20 percent); the proportion of full-time faculty with Ph.D.'s in the 1999 academic year (20 percent); and the 1999 ratio of master's candidates to full-time faculty (10 percent).
- **Research activity** (25 percent): *U.S. News* uses total research expenditures (60 percent of this measure) and research dollars per faculty member engaged in research (40 percent). Expenditures refer to separately funded research, public and private, conducted by the school, averaged over fiscal years 1998 and 1999.
- **Overall rank**: Data were standardized, and standardized scores were weighted, totaled, and rescaled. The top-scoring school received 100; other schools received their percentage of the top score.
- **Specialty rankings**: Engineering deans identified 10 schools with the best programs in each area. Those with the most nominations appear. The schools verified their offerings.

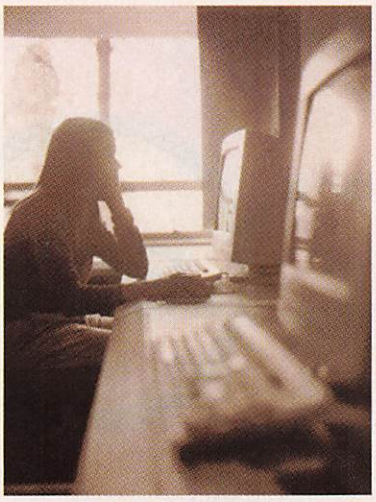
Getting into Grad School by Going Online.

We all know the traditional way of applying to college and graduate school. It involves poring over large reference books, making costly long-distance phone calls, waiting for the mail to arrive and filling out the same information over and over again. Not to mention rushing to the overnight courier's office to get your completed application to your dream school on time.



Thankfully, the Internet is changing all that. New resources on the Web offer comprehensive information that helps students do their homework on schools, prepare for standardized tests and target financial aid options. One of the most exciting new online options is an electronic application that can be submitted directly to academic institutions over the Net.

Prospective students can now go to a Web site like Embark.com (www.embark.com) and find customized applications to a broad range of higher education institutions. Applicants fill out basic personal information once and it is automatically transferred to other applications, while allowing them to save their work and come back to it at any time (even if it's next year!).

The online systems also provide error checks to make sure users have filled out all of the required fields, and e-mail confirmation when applications are received by the admissions office. Security and protecting the students' identities are key elements of the entire process.

Jamie Zaninovich, an MBA student at Stanford University, said: "One problem with the paper and pen method is that there's really no way to confirm that you've filled out all the areas correctly, but on the Embark.com system you push a button and it will do a complete check. Also, having instantaneous feedback that you've gotten everything in takes a lot of the anxiety out of the process."

And while students like Jamie are finding the online route a great way to get in, universities are also learning that it helps cut down on administrative costs. According to a survey by the National Association for College Admission Counseling, about 77 percent of colleges now provide online applications of some kind.

Wil McKoy, associate director of Student Information Systems for Columbia University, commented: "We currently receive 40,000 applications each year, and we would be very happy if even 10 percent of those were submitted to us electronically. Online applications are easier for us to process, eliminating a lot of manual and time-intensive procedures."

Embark.com makes the admissions process easier for everyone involved, and provides prospective students with the tools they need to achieve their educational objectives – from advice and information to standardized test preparation and electronic applications.

Techies with a healing touch

The job market is wide open for engineers with biological expertise

By Jennifer Couzin

When Samir Mitragotri arrived at the Massachusetts Institute of Technology in 1992, he had never heard of bioengineering. But in the span of just seven years, he has become a bioengineer extraordinaire. Armed with a Ph.D. in chemical engineering and research experience in new ways of pumping drugs into the body, in 1998 he cofounded a company to commercialize his MIT research. And recently he moved on to the University of California–Santa Barbara, where he is setting up a bioengineering curriculum—something that wasn't available to him when he started at MIT.

As Mitragotri, now 28, has discovered, there are plentiful job opportunities for engineers who can apply their skills to biological problems. In recent years, the field of bioengineering has grown rapidly, with universities and biotechnology and pharmaceutical companies snapping up grads in almost any engineering discipline, from mechanical and electrical engineering to computer science. Some bioengineers, like Mitragotri, are trying to make it easier for individuals to take the medications they need; others are building better prosthetic limbs or crafting artificial blood. "[There are] real opportunities that didn't exist even 10 years ago," says Cynthia Stokes, a bioengineer at Entelos Inc., a biotech firm in Menlo Park, Calif.

Federal funding agencies are fueling the nascent discipline. In 1999, for instance, the National Institutes of Health spent $645 million on bioengineering research, up from about $300 million in 1993. Technological advances in both biology and engineering also have helped spur growth in the field.

The bulk of new jobs are in industry, whether at start-ups or giant corporations. "We're hiring greater quantities of bioengineers" than just a few years ago, says Paul Citron, vice president of science and technology at Medtronic, a medical device company in Minneapolis that is seeking up to 25 people with graduate experience in bioengineering. Most companies pay bioengineers competitive salaries—about $60,000 to $70,000 for new Ph.D.'s, comparable to what recent grads in other engineering fields earn.

Cash flow. An influx of money from the federal government and private donors also is creating jobs in academia. The number of schools with bioengineering departments or programs has jumped to 89 (from 51 in 1992) and continues to grow.

JEFFREY MACMILLAN FOR *USN&WR*

PATHBREAKER. Univ. of California–Santa Barbara's Samir Mitragotri

Last October, the University of California–Berkeley, launched a $500 million health-sciences initiative where engineers and other scientists will develop new treatments for a host of diseases, from arthritis to cancer. Stanford University has a similar program in the works, and last year MIT established a division of bioengineering and environmental health.

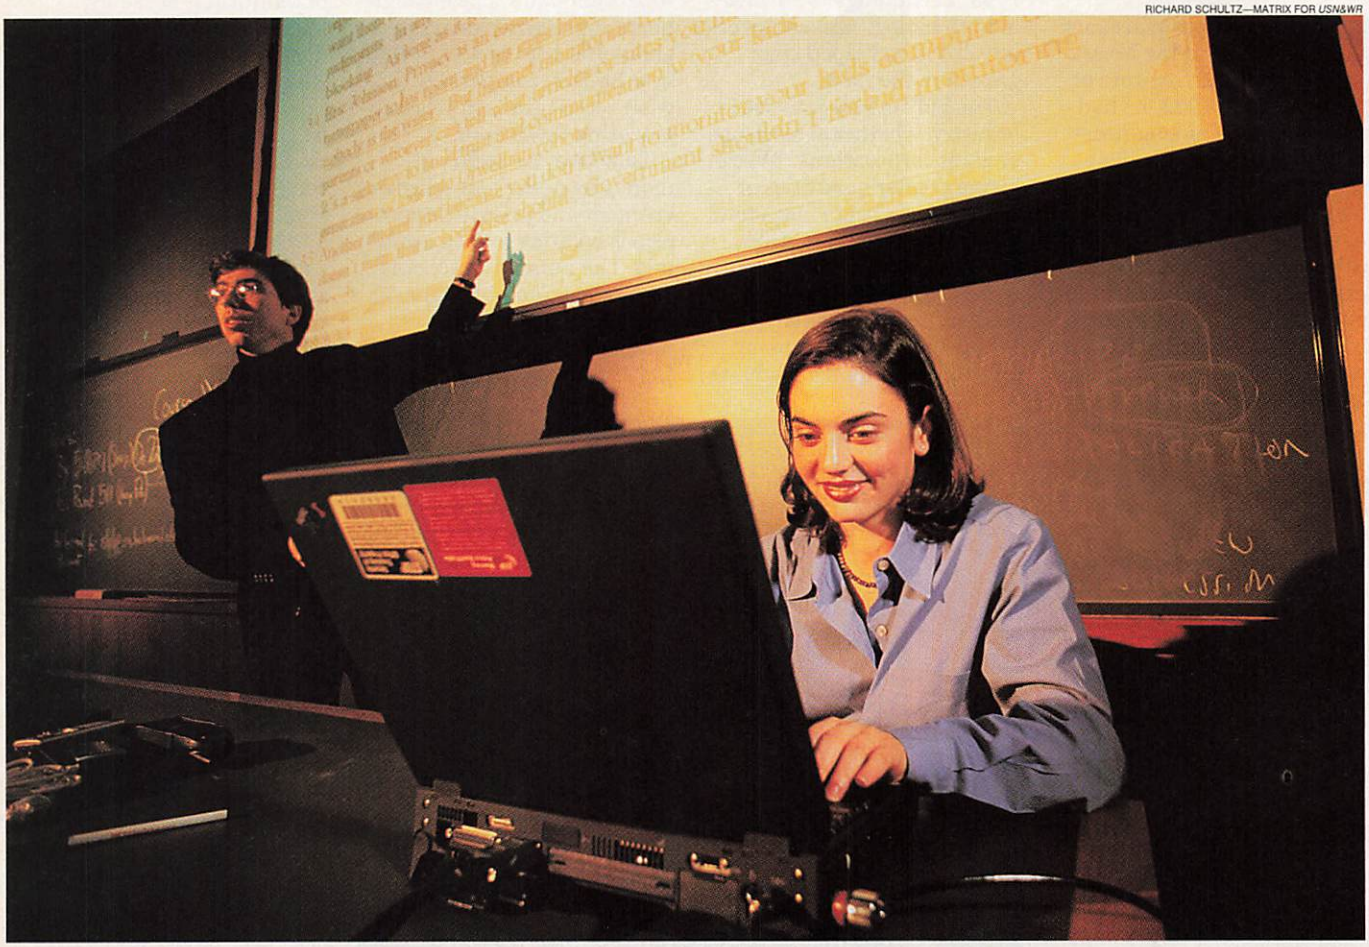
But preparing for these jobs is not as easy as in some more-established fields. In Stanford's electrical engineering department, third-year graduate student Kristin Hedgepath, 24, has run into a problem common among grad students interested in bioengineering: the lack of a cohesive curriculum. "A lot of my courses are completely unrelated to my research," she says. So she, like many of her peers, has put together her own course of studies, sitting among medical students one day and more-traditional engineers the next. Schools are working to remedy the problem, though—both MIT and the University of Washington have recently developed a multidisciplinary curriculum for their bioengineering students.

Finding a job, too, may require a little extra effort and imagination. While some big companies, like Merck and Johnson & Johnson, interview prospective hires on campus, students may need to write or travel to smaller companies that interest them or foster connections with them during graduate school. And of course, should working for someone else sound unappealing, becoming a founder and CEO, like Samir Mitragotri, is always an option. ●

Law

The practice of Internet law is hot, and so are new courses on it

RICHARD SCHULTZ—MATRIX FOR *USN&WR*



CHANGED COURSE? **Shoshana Lopatin so enjoyed her cyberlaw class that she might not choose environmental law after all.**

By Amy Saltzman

Two years ago, Case Western Reserve law student Chris Gerstle went looking for a summer position that would exploit his background as a Web-page designer. He couldn't find a single law firm in the cities where he was searching—New York, Cleveland, and Washington, D.C.—that had an Internet practice. A year later, Gerstle, a competent student with a 3.5 grade point average, was interviewed for Internet-law jobs by more than 30 firms in those same cities.

As rapidly as the Internet transforms modern life, it is creating enormous demand for Net-savvy lawyers who can figure out how a body of law written for another age applies. Few areas of practice have been left untouched: Intellectual property lawyers must grapple with how to protect the ownership of ideas in cyberspace; attorneys specializing in privacy and censorship issues must calculate whether—and how—existing law controls the flow of information in a revolutionary medium. How do long-standing health laws, banking laws, and securities regulations, for example, affect companies conducting business online?

For law schools, the challenge is to educate future attorneys in an area of jurisprudence that is new and rapidly evolving. Indeed, the few casebooks written on the subject so far come with Web sites for frequent revisions. Within the past three or four years, top law schools such as Harvard, Yale, and the University of California have set up centers devoted to the study of—and teaching of—Internet law. And while not as ubiquitous yet as Torts and Civil Procedure, courses like Cyberspace Law, Intellectual Property and the Future of the Information Society, and the Law of Electronic Commerce are of-

fered now by nearly every law school in the country. When Mark Lemley, a professor at the University of California–Berkeley's Boalt Hall School of Law, started keeping track three years ago of professors who taught courses or seminars on the Internet, he located just 25 around the world. Today, his mailing list contains 188 names, including about 100 professors in this country representing some 75 law schools. A few institutions, such as Suffolk University Law School in Boston, offer concentrations in the field; graduates of the Suffolk program receive a certificate in high-technology law. Berkeley, whose Internet law program is one of the nation's largest, offers 18 courses, from a general survey of cyberlaw issues to classes on advanced patent litigation and biotech law.

Net knowledge. New lawyers with a background in the issues have an edge with the many law firms now establishing separate areas of practice in Internet law (Page 53). Even firms with few high-tech clients are finding themselves in the business, as low-tech organizations from shopping malls to hospitals to securities firms seek advice on the legal ins and outs of their Web sites or online activities. The registration of so-called dot-com or domain names, for instance, has spawned hundreds of intellectual-property suits against "cybersquatters" who register trademarked company names as Web-site addresses and then attempt to sell them back to the companies who want to launch their own sites.

Companies selling products or services online may run afoul of jurisdictional laws affecting what can be sold in one state or country but not in another. In one recent case, the German government disputed the right of online bookseller Amazon.com to sell Nazi literature to German citizens, since such works are banned in Germany. The company recently agreed to stop shipping copies of Adolf Hitler's *Mein Kampf* to buyers there. The state of Minnesota is currently prosecuting casino owners in Nevada who operate online gambling sites accessible anywhere in the country, arguing that gambling is illegal in Minnesota.

Besides educating students in the legal issues of cyberspace, the most innovative law schools aim to instill a true understanding of its technology. At Detroit's Wayne State University Law School, students in Jessica Litman's The Law in Cyberspace course get all their class assignments on the Internet and must design their own Web page on a cyberlaw topic. In one class, students were instructed to find online examples of hard-core pornography, noxious hate speech, and dangerous or deceptive information and bring them to class. "I wanted them to look at the very difficult questions raised by censorship technologies that filter out the horrible stuff but also potentially block access to information people need," says Litman.

In Jonathan Zittrain's course on the Internet and society at Harvard, students use software that allows them to explore such vexing issues online and critique each other's positions. One exercise, for example, required students to argue whether a woman had broken the law when she unlocked a software code for a CD-ROM inserted in a magazine that contained 2,000 interviews with celebrities. Three of the interviews were available at no cost, and readers could pay to view the rest by calling a phone number. The woman was able to get all 2,000 for free.

Such assignments forced third-year student Shoshana Lopatin to think about law more creatively than she had to in other classes. "In traditional areas of the law, the doctrine is there for us to draw on. But it is not clear that the existing legal doctrine will apply to the Internet," says Lopatin, who decided that the woman had broken the law because she had violated an implicit contract stating that, for the price of the magazine, she could view three interviews.

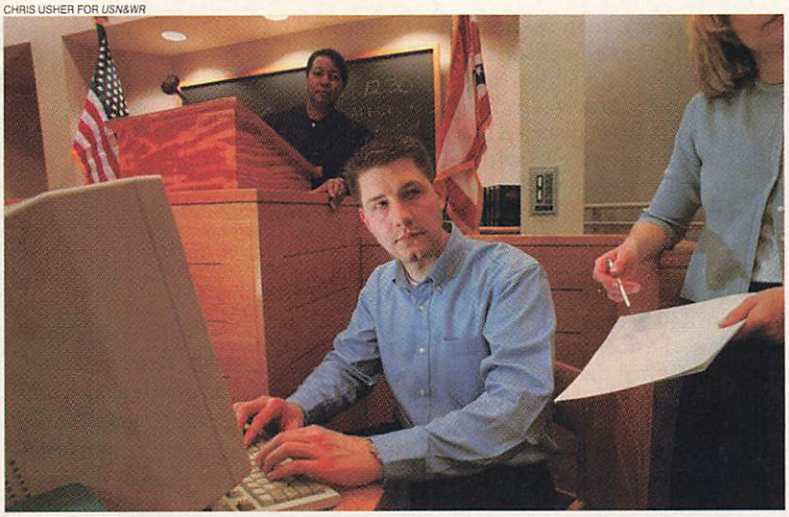
THE NEXT TREND. **Cyberlaw will be part of every subject, predicts Miami's Michael Froomkin, who teaches a survey course.**

Taking all 2,000, Lopatin reasoned, was no different than stealing CDs from a music store. Lopatin, who came to Harvard planning to become an environmental lawyer, now isn't so sure about her plans. She recently accepted a position at Sidley & Austin in Washington, D.C., partly because the firm is setting up an Internet practice.

"Trendy" teaching. Not everyone is convinced that devoting considerable resources to separate courses about cyberspace—or separate practice areas—is worthwhile. In an article for the University of Chicago *Law Review*, Judge Frank Easterbrook of the U.S. Court of Appeals for the Seventh Circuit, argued that a law of cyberspace makes about as much sense as a law of horses. Easterbrook, a lecturer at the University of Chicago, believes that legal questions that arise because of the Internet should be studied—and handled—as an integral part of general issues of law. The university itself has taken a similar stance, resisting what Deputy Dean Elizabeth Garrett calls

ALEX QUESADA—MATRIX FOR *USN&WR*

CHRIS USHER FOR *USN&WR*



A MAN IN DEMAND. **When Chris Gerstle went job hunting, more than 30 law firms liked his Internet experience.**

a "trendy" approach to teaching about the issues. Starting next year, the school will require all first-year students to take a course called Technology, Innovation, and Society that will examine such basics as contracts and torts through the lens of technology. In other courses, Chicago integrates high-tech issues into the general study of law. Garrett teaches a course on the democratic legislative process in which, for example, she devotes some class time to discussing privacy issues related to states' practice of putting campaign-finance-disclosure forms on the Internet.

Even some of those teaching Internet-law courses today believe Easterbrook and his followers have a point. "In 10 years, I think it will be impossible to teach a general survey course on the Internet like I do. There will simply be too much," says Michael Froomkin, a professor of law at the University of Miami, which offers courses on Internet Law, Electronic Commerce, and Digital Intellectual Property. He argues that courses in every specialty area of the law from banking to criminal law will need to have an Internet component.

The right mix. Firms starting Internet practices stress that they are looking for attorneys with a strong general understanding of law who also demonstrate familiarity with Internet business. "The new lawyers we have hired for our Internet group have taken a good combination of Internet law classes and intellectual-property classes," says Vivian Polak. She heads the 50-person Internet group at LeBoeuf, Lamb, Greene & MacRae in New York, the 750-lawyer international firm that hired Chris Gerstle. "What is really important is someone who can instill confidence in clients because they understand the issues from a business perspective."

Balancing a law school course load with outside work in the field would be daunting for the average law student. As a result, some schools are starting to integrate work experience into the curriculum. The University of California-Berkeley, for example, sets up internships that allow students to do legal research for Silicon Valley companies and is considering offering joint courses with the business school. The trick is for new lawyers to learn to think like the entrepreneurs and growing businesses they represent, says Pam Samuelson, co-director of the Berkeley center. In a field long controlled by tradition and precedent, Samuelson believes Internet lawyers have a rare opportunity to create something new. ●

TOUGHER STANDARDS

States are raising the bar

Here's something to ponder as you apply to law school: Graduates are finding it harder to pass the bar exam. Only 70 percent of accredited schools' graduates passed the state-administered tests in 1998, down from 74 percent in each of the previous two years. In California, which has many unaccredited schools, only 51.2 percent overall passed in July 1999. Some analysts predict that the national rate will keep dropping. (The odds of eventual passage improve for those who try again.)

State officials argue that they need to raise standards because of the frequency of consumer complaints about lawyers. Admission trends may lend credence to that argument. Applications to law schools declined in the 1990s from 99,000 yearly to 72,000, which leads many academics, including Prof. Richard Litvin of Connecticut's Quinnipiac law school, to conclude that some institutions are accepting less qualified students and graduating them "without assuring that they are fully competent." The toughened standards are likely to hurt minorities especially. A 1998 Law School Admission Council study found that the bar passage rate for African-Americans in 1994 was about 20 percent lower than for whites.

Taking action. The American Bar Association, which accredits law schools, plans to monitor whether schools are doing all they can to prepare students at high risk of failing. Many schools are taking action already. Quinnipiac supplements commercial "bar review" courses with 30 hours of practice classes for third-year students. In Connecticut, more than 80 percent of graduates pass the bar the first time. Capital University Law School in Columbus, Ohio, this year launched a "Super Start" bar exam course in which students grade each other's practice tests.

Still, long before they graduate, students might want to find out what subjects are covered on the bar exams where they plan to practice. Some tests may include federal tax law, for example; others, family or administrative law. "If a subject scares you, that might be a reason to take it in law school," says law Prof. Deborah Merritt of Ohio State University. About half the states require a memo that applies legal principles to a collection of facts. That suggests that students should consider schools with rigorous courses in legal writing. Finally, you can think about practicing in Utah or New Mexico, where the pass rate tops 90 percent. *–Ted Gest*

They'd rather be in business

Law schools are prepping future attorneys for the corporate life

By Ted Gest

Slog through two years of grueling classes and spend the third landing a big-bucks job on the partnership track. Traditionally, that has been the route American law students have followed to success. But consider the choices of Sherry Lin, John Dayton, and Michael Pinkus. Lin, a third-year Northwestern University Law School student, is working in a school legal clinic representing entrepreneurs. She hopes to put her degree to use as the boss of her own company. Dayton, after graduating from Temple University Law School in 1998, took a job at the Philadelphia Stock Exchange, where he works on regulatory and employee-relations issues. Pinkus got a law degree in 1998 from Southern Methodist University in Dallas and now works in Frankfurt for KPMG Germany, an affiliate of the accounting firm.

The three are part of a nascent shift away from law firms and toward corporate America driven by students who yearn for a larger role in the development of new business ideas. Rather than passing arm's-length judgment on a client's new-product plan or acquisition aims, they want to sit at the table and help devise the plan—and then share in the stock gains. A decade ago, fewer than 6 percent of graduates took jobs in business, either as in-house lawyers or in another capacity, says the National Association for Law Placement; by 1998, the figure had jumped to 14 percent. And many who choose to start out at law firms leave very shortly for the corporate life.

B-school effect. Law schools are responding to the change in student direction by lacing their curricula with business-oriented electives—International Intellectual Property, for example, and Multinational Business Enterprises. Professors are also relying less on the age-old teaching method of dissecting appellate rulings and more on the B-school model of solving realistic problems. In Temple's classes on "Transactional Practice," for example, second- and third-year students advise "clients" acquiring another company how to handle outplacement counseling and demands for severance pay from emotional employees. Students in Stanford's environmental law program don't simply memorize the case law on hazardous waste disposal. They figure out how that biotech firm should respond when a surprise inspection by state regulators turns up violations that the company considers minimal. The goal is to equip future lawyers to anticipate and avoid disputes, not simply to plot strategy once an issue has neared the litigation stage, says Paul Brest, a former Stanford law dean and champion of this more practical method of legal education.

Solutions explored in class can be tried out on real clients in the legal clinics many schools run with student lawyers. At Northwestern and Chicago-Kent in Chicago, the University at Buffalo, and Southern Methodist University, for instance, students might one week advise a company on how to get funding for housing construction, another week counsel a small business embroiled in a zoning dispute. The many hours that Northwestern student Sherry Lin, 27, has spent working in a clinic have been "a tremendous opportunity" to see how theory translates into practice, she says, one she would have missed as part of a traditional classroom experience. Helping a small company manage both the market-

KEVIN HORAN FOR *USN&WR*

THE RIGHT MIX. Sherry Lin uses her legal and business know-how advising entrepreneurs at Northwestern's clinic.

ing and legal aspects of selling its exercise board has given Lin the confidence to plan the launch of her own company after graduation. (She's not ready to announce what her own business will be.)

A number of law schools are now making it possible for students to specialize in business law, either by easing the pursuit of a joint J.D./M.B.A. degree or by offering a concentration in business. At Northwestern, where more than 60 percent of law students take a business-related course—a far higher proportion than at most schools—Dean David Van Zandt is pushing for at least 10 percent to get joint degrees with the management school. He aims to make the process more economical by allowing students to take summer courses, thus cutting the overall time required from four years to three.

JORN VANHOFEN—OSTKREUZ

A STINT ABROAD. **Lawyer Michael Pinkus consults on tax issues for multinational clients of KPMG in Germany.**

Tulane offers a joint degree but encourages most students to simply enroll in business courses. Too often, says Vice-Dean Lawrence Ponoroff, students hoping to "dress up their résumés" with a dual degree put their law-school grades at risk. Tulane may add a concentration in entrepreneurial law to its certificate programs in such areas as maritime and sports law. About 10 percent of Syracuse law students enroll in an interdisciplinary "concentration major" that gathers students in law, management, and engineering to develop new technologies. Georgetown University's "B" curriculum for law students interested in nontraditional careers now attracts about 20 percent of the student body. The alternative courseload omits subjects like constitutional law and torts in favor of negotiation strategies that change depending on whether talks involve strangers or acquaintances, say, and the application of economic principles to landlord-tenant squabbles.

Changing times. For now, the most common entry to a business career is the corporate in-house counsel's office—the route that John Dayton, 30, chose when he became one of only 11 lawyers at the Philadelphia Stock Exchange. By the time this year's law-school applicants get out, however, there could be a wide new avenue: the highly controversial "multidisciplinary practice." The basic idea of these consulting firms is to give clients one-stop shopping for solutions to all of their legal, accounting, and management problems. Such firms are common in Europe but don't exist here: An American Bar Association ethics rule has long prohibited lawyers from working for nonlawyers in fee-sharing partnerships. Traditionalists argue that attorneys might be compromised by helping draw up deals one week and having to render a judgment on them the next. "When lawyers work for nonlawyers, they lose their independence," argues Lawrence Fox, a Philadelphia attorney.

But a loosening of the U.S. rules may be inevitable. James Jones, in-house counsel of APCO Associates, a consulting spinoff of Washington, D.C.'s elite Arnold & Porter law firm, believes that American companies are bound to demand legal services that are "more accessible, more efficient, and more cost effective." He points to a *Financial Times* survey showing that 75 percent of U.S. financial firms would use multidisciplinary practices if they could for some of their legal needs. An ABA panel taking another look at the issue is expected to report its opinion soon.

Already, the Big 5 accounting firms have hired more than 6,300 lawyers to handle work for their corporate clients. At the moment, the ones working in U.S. offices must function as consultants, not as attorneys. But Ernst & Young recently joined forces with a law firm in Washington, D.C., to offer legal financial, and consulting advice separately in a single location. And international clients of PricewaterhouseCoopers can get legal services abroad, sometimes in multidisciplinary practices, from Landwell legal network, a company affiliate with more than 1,400 lawyers.

The best and brightest young lawyers-to-be are hearing some "very aggressive" pitches, says Abbie Willard, assistant dean for career services at Georgetown, where one fourth of this spring's graduates will be interviewed by a Big 5 firm. The appeal of the consulting life? Regular hours, wider relocation, and travel opportunities. "Some recruiters tell students, 'We have offices around the world—when you want to move, tell us,' " says Willard. To Michael Pinkus, 29, "It's an excellent opportunity for exposure to different types of professionals." Though his office at KPMG in Frankfurt is not part of a formal multidisciplinary practice, Pinkus collaborates on a daily basis with economists, accountants, and other lawyers advising multinational companies on tax issues, and helps clients plot strategy. For young lawyers like Pinkus, the question has become: Why be just a partner if you can be a player? ●

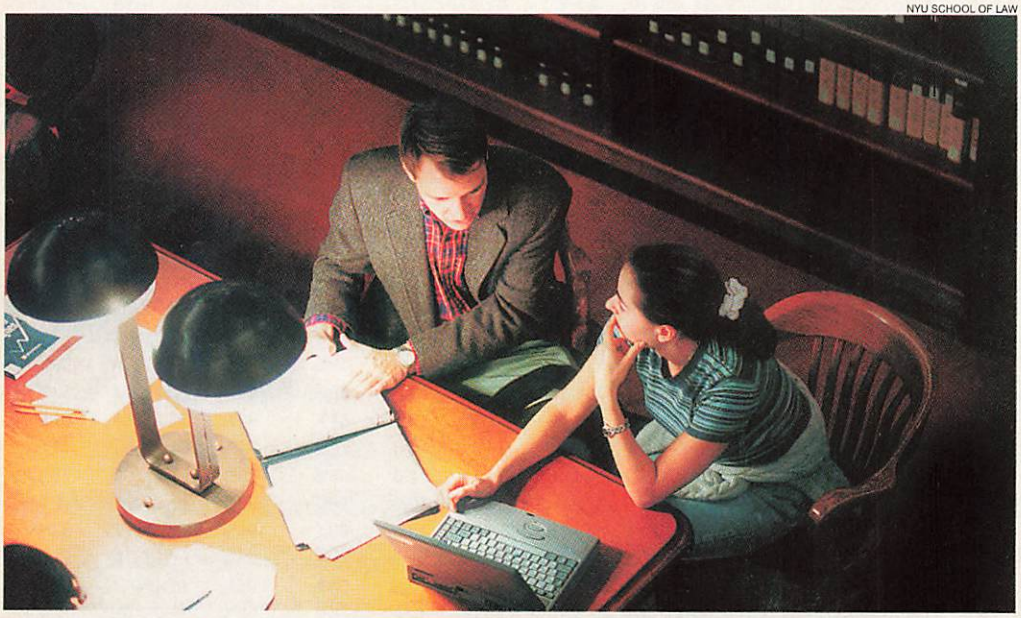
6. Yale University (CT)
8. University of Virginia
9. Boston University
10. Stanford University (CA)
10. Univ. of Michigan–Ann Arbor

NYU SCHOOL OF LAW



NEW YORK UNIVERSITY. Its law school takes a first in international and tax law, and in clinical training.

METHODOLOGY

The rankings for 174 accredited law schools are based on a weighted average of the 12 measures of quality described here. The specialty rankings are based on reputation. An overview of our methods appears on Page 11.

- **Reputation** (40 percent): Measured by two surveys conducted in fall 1999. The dean and three faculty members at each school were asked to rate schools from "marginal" (1) to "distinguished" (5); 64 percent responded. The score accounts for 25 percent of the rank. Lawyers, hiring partners, and senior judges rated schools; 38 percent responded. The score accounts for 15 percent of the rank.
- **Selectivity** (25 percent): Combines median LSAT scores (50 percent), median undergrad GPA (40 percent), and proportion of applicants accepted for the fall of 1999 (10 percent).
- **Placement success** (20 percent): Employment rates at graduation for 1998 graduates (30 percent) and nine months after (60 percent), and the bar passage rate (10 percent). Employed graduates are those working, pursuing graduate degrees, and (for the nine-month rate), 25 percent of those with unknown status. Those not seeking jobs are excluded. Bar passage indicator is the ratio of the school's rate in a selected jurisdiction to the overall rate for first-time test takers for summer 1998 and winter 1999. The jurisdiction is the state where the largest number of 1998 grads took the test first.
- **Faculty resources** (15 percent): Based on average 1998 and 1999 expenditures per student for instruction, library, and supporting services (65 percent); student/teacher ratio (20 percent); and average per-student spending in 1998 and 1999 on all other items, including financial aid (10 percent); and total number of volumes and titles in library (5 percent).
- **Overall rank:** A school's score on each indicator was standardized. Then scores were weighted, totaled, and rescaled so that the top school received 100 and other schools received a percentage of the top score.
- **Specialty rankings:** Legal educators identified the 15 schools with the best offerings. The 10 schools receiving the most nominations appear. Schools verified their offerings.

MORE SCHOOLS

In its ranking of law schools beyond the top 50 institutions, *U.S. News* lists schools in three tiers. Law schools within each tier should be considered broadly similar in quality and are listed alphabetically. To be ranked, a law school must be accredited and fully approved by the American Bar Association, and must draw most of its students from the United States. We encourage applicants to look not only at a law school's ranking or tier but also at characteristics of each institution—its location, its price, its course offerings, and faculty expertise—and how well a school meets the applicant's own needs. A campus visit is definitely in order. For more information on all the schools, see the directory that begins on Page 97.

School Name	Reputation score by academics (5.0 highest)	Rep. score by lawyers/ judges (5.0 highest)	'99 undergrad GPA 25th-75th percentile	'99 LSAT score 25th-75th percentile	'99 acceptance rate	'99 student/ faculty ratio	'98 grads employed at graduation	Employed 9 months after graduation	School's bar passage rate in jurisdiction	Jurisdiction's overall bar passage rate

Badly wanted: tech attorneys

Luddite lawyers, too, are finding themselves in great demand

By Margaret Loftus

When Wilson Sonsini Goodrich & Rosati opened for business in 1961 as a Silicon Valley law firm counseling high-tech and other fast growing companies, its entire work force consisted of four attorneys. Today, it has grown to more than 600. At competitor Fenwick & West, the number of technology lawyers just hit 250, nearly twice the roster of 1996; 45 new associates will start this coming fall. "I couldn't have planned this better," says Rahul Kapoor, a former engineer for Lockheed. Ten years ago, Kapoor anticipated that corporate America would soon need experts on the ways business, technology, and law converge. Last year, after attending law school at the University of Wisconsin and working as a Wall Street attorney for two years, Kapoor interviewed with six of the top Silicon Valley law firms. He received six offers and is now a business and technology associate with Brobeck, Phleger & Harrison in Palo Alto, earning $165,000 yearly. A potential bonus would raise that by $50,000.

If only firms could clone him. "We have so much [tech] work," says Brobeck recruiting partner Molly Lane, "we just don't have enough people to do it." The 93 attorneys at Venture Law Group, headquartered in Menlo Park, Calif., turn down 95 percent of the business that comes their way. While recruiting is most intense in the high-tech meccas—California; Northern Virginia; Boston; Austin, Texas; and New York—opportunities exist nationwide, albeit at slightly lower salaries. At Faegre & Benson's Minneapolis and Denver offices, for example, tech attorneys start at $75,000.

Luddite lawyers, too, are enjoying a hiring boom unlike any since the late 1980s. Just a few years ago, the unemployment rate for new law graduates was nearly 15 percent; last year, it had fallen to 5.2 percent. High-profile firms are now reaching beyond the most prestigious law schools and deeper than the top 15 percent of the class, says Robert Smith, director of the office of career services at Duke University law school, where 407 firms recruited last fall, up from 280 in 1994. And older, part-time students are finding that previous work experience counts for more than it has in the past, says Skip Horne, director of law career services at Santa Clara University School of Law.

While private practice continues to lure more than half of new graduates, a growing percentage are entering the corporate world (story, Page 47) within a couple of years of—if not at—commencement. Some 40 percent of newly graduated hires leave law firms after three years, many of them "poached" by corporate clients. Starting salaries are often lower than at top firms (a median of $50,000, compared with $60,000 at law firms nationwide), but stock options sometimes more than compensate.

Wining and dining. Competition for the best and the brightest has brought the wining and dining of summer associates—not to mention starting salaries—to a whole new level. Second-year Duke law student Melvina Lansing-Carrick got a formal apology note from one California firm for putting her up at the Marriott instead of the Four Seasons, but what really intrigued her was several firms' extended maternity leaves and flexible hours. She noted with interest that during her 10 "flyback" interviews, three of her conversations were with pregnant partners. In 1998, the median starting salary of $60,000 was up from $55,000 the previous year; at some top firms in New York and San Francisco first-year pay can reach more than $150,000, depending on bonuses—roughly 20 percent higher than a year earlier. And new extras are being offered: Brobeck guarantees home loans, for example, and invests $2,500 per year in stocks for each associate.

Smith says some hiring partners have voiced concerns over how long the booming economy will keep business flooding in. But tech lawyers, at least, should find themselves in a seller's market for a long time to come. "[We] are riding the biggest business wave the world has ever seen," says Rahul Kapoor. "It's clearly the place to be." ●

Medicine & Health

Rocked to its roots by managed care, social work struggles to retool

JEFFREY MACMILLAN FOR *USN&WR* (2)

SPEEDY RECOVERY. **Heidi Behr puts her "brief treatment" skills to work as an intern at a college counseling center.**

By Amanda Spake

Charles Ortolani, Boston University adjunct professor and a therapist at a substance-abuse-treatment agency in Salem, Mass., is preaching to a class of social-work students what he practices with his clients. "The thing [you've got] to think about," he says, "is not why the problem *exists* but why the problem *persists*." His course on "brief treatment" focuses on helping clients achieve behavioral or mental health goals, such as quitting drugs, in just a handful of psychotherapy sessions.

Student Heidi Behr, 35, tells the class she has been working with a difficult client—an alcoholic—in her job as a substance-abuse counselor. Although he wants to stop, after six sessions he is still drinking. So she tried an idea she had learned in class. "I asked him 'the miracle question,'" she says. "'What would it look like if you woke up and all of this was behind you?'" He revealed that his dream was to teach martial arts. "I could really see doing that if I stayed sober," he said. Behr told the class that she felt great until her client added that he was more likely to rob a bank than to get on the wagon. Ortolani laughs. He concedes that no one strategy works every time and praises Behr for trying different approaches. "In brief treatment, if one tool isn't working," he says, "you try another."

Ortolani's class exemplifies how graduate schools are changing to prepare students for the brave new world of today's social work. Like medicine, the field has been rocked to its roots by managed care, which has changed both the nature of social work and the skills practitioners need to survive professionally. Some programs are integrating classes on brief treatment and group therapy—both of which

are cheaper than traditional long-term therapy. Schools also are adding courses on budgeting and managed care, and on methods for measuring how clients fare after treatment. Some are revamping their internship programs, placing more students in community health centers, shelters for battered women and the homeless, and corporate employee assistance plans. "The schools are running to catch up," says Susan Donner, an associate professor in the School of Social Work at Smith College. "But I'm not sure [they] even know the exact nature of the changed terrain."

Public to private. Today's upheaval is the second for the field, which has its origins in the settlement houses and children's aid societies of the late 19th century. As social work came of age, many practitioners went to work in community mental health and antipoverty organizations or in government social service, aging, or child welfare agencies. Most jobs entailed counseling clients and helping them secure necessary services, such as home health care, substance-abuse treatment, or parent-training courses.

In 1982, the federal government's Civilian Health and Medical Program of the Uniformed Services dropped its requirement that physicians supervise treatment by clinical social workers and began reimbursing them directly for psychotherapy. Blue Cross/Blue Shield and other private insurers soon followed. Social workers fled relatively low-wage government and community jobs and moved into private practice, where incomes remain among the highest in the field, according to the National Association of Social Workers.

But with 4 out of 5 Americans now insured by some form of managed-care health plan, many social workers in private practice are being squeezed out. To contain costs, managed-care companies began limiting long-term therapy. In 1988, 46 percent of plans that imposed a limit allowed 50 visits yearly. By 1997, only 17 percent allowed 50 visits, and most limited the number to 20 visits. (Many clients discontinue therapy before they reach the limit; the average number of visits per client in 1997 was 3.43, down from 4.02 in 1995.)

Plans also have reduced the number of social workers who can maintain a viable private practice by lowering the fees they pay practitioners and by requiring members to get treatment only from therapists who belong to tightly controlled networks of mental health providers. These practices have led the National Association of Social Workers to back an antitrust lawsuit against nine managed-care companies in New York. The NASW charges they engaged in a conspiracy to fix fees and restrain trade. "Many private practitioners have dropped out [of private practice] because the fee they receive has been lowered and the demand of the paperwork is horrendous," says Josephine Nieves, executive director of NASW.

At the same time that managed care is pushing out private practitioners, it is creating new roles for those who have skills that health care companies value. One such skill is proficiency in case management—the task of finding the appropriate level of service to meet a client's needs. "Managed care is based on case management," says King Davis, former commissioner of mental health for the Commonwealth of Virginia and a professor of social work at the University of Texas–Austin. "Those first-line decisions about benefits are ideally made by a social worker."

Corporations also are looking to social workers to staff their employee assistance programs, which offer mental health services as an employment benefit. Further, as managed care has restricted inpatient hospitalization, mental health care—even for the chronically ill—has been shifted to shelters and community treatment facilities, where social workers play a major role. There is also an increasing effort to keep the frail and elderly out of costly nursing homes by providing them with in-home social, medical, and mental health services. This has resulted in a demand for social workers in home health care companies. And new attention to adolescent pregnancy, depression and suicide, teen violence, and childhood stress is redirecting social-work practice into schools and youth, family, and community centers. "There are many opportunities in social work," says Wilma Peebles-Wilkins, the dean of the Boston University School of Social Work. "There's a chance to work with people in need and to make a difference. But the opportunities are not in private practice. The field needs to return to its roots and move toward more community-based approaches to clients."

Perhaps because managed care took hold earlier in New England, the social-work schools in that region were among the first to make changes.

MANAGED HELP. Employee assistance coordinator Karen Kirkpatrick (left) trains social-work student Tammy Farmer.

Smith College has sought out practicum assignments for students that highlight work in community settings. First-year student Virginia Gold, for example, works as a counselor at the 750-student Milton Bradley Elementary School in Springfield, Mass. "Working with elementary school kids is about working with the family," she says. She counsels kids several times a week who are having trouble adjusting to life changes—foster care placement, learning or physical disabilities, a death in the family. The Smith students started a bereavement support group for students who have lost a parent or primary caregiver. They've also set up a girls' group, focused on developing self-esteem. For fifth graders last year, there were "lunch bunches," weekly get-togethers at which the kids talked about their expectations of middle school and growing up.

Some observers are encouraged by one sign of a new interest in school social work: Congress recently appropriated $20 million for fiscal 2000 for the Elementary School Counseling Demonstration Program, approved six years ago but not funded until now.

MICHELE MCDONALD FOR *USN&WR*

IN THE SCHOOLS. **Social-work student Virginia Gold is an intern at Milton Bradley Elementary School in Springfield, Mass.**

Smith College may have been able to shift its curriculum more rapidly than some schools because it has no tenured faculty. Tenured professors may not be trained or willing to teach managed-care-related courses. "We're desperately short of faculty to teach this stuff," says Dale Masi, an expert in employee assistance program design and the chair of occupational social work at the University of Maryland School of Social Work. When Masi recently advertised inside the university for a social-work professor to move to a tenured position in EAP, no one qualified applied for the job.

On the job. Maryland began overhauling its social-work training five years ago. "Managed care forced us to look at our curriculum and see to what extent we are preparing our students to be able to talk to accountants and controllers, who expect and demand accountability," says Jesse Harris, the dean of the School of Social Work. Maryland refocused on occupational, or workplace, social work and now has the largest employee assistance training program in the nation.

More than 90 percent of *Fortune* 500 companies offer a benefits package to employees that includes some sort of employee assistance program; 3 out of 4 companies contract with firms that provide EAP services. Staffed largely by social workers, EAP companies may offer short-term psychotherapy, substance-abuse treatment, debt counseling, legal aid, and help finding everything from adult day care to car insurance and college loans. Studies show that EAP services keep employees working longer and better; they reduce turnover and, so, retraining costs, and they decrease sick time and absenteeism. Masi cites statistics showing EAP programs return $7 to $13 for every dollar a company spends on them.

University of Maryland student Tammy Farmer has an internship at Magellan Behavioral Health, a large managed-care and EAP company. At Magellan's corporate headquarters, Farmer helps develop corporate health care policy and works on efforts to evaluate treatment practices. She says, "The idea is that you have people with clinical knowledge rather than just financial people making decisions."

Some schools encourage students to consider a complementary degree to take better advantage of new opportunities. Washington University in St. Louis, for instance, offers dual degree programs, partnering the master's of social work with a master's in business administration or architecture, or with a law degree. Steve Wilke-Shapiro, 25, will graduate this spring with dual master's degrees in social work and architecture. He is using his training in South St. Louis, where a program to enhance city neighborhoods has provided funding for a nursery school to expand into a community learning center.

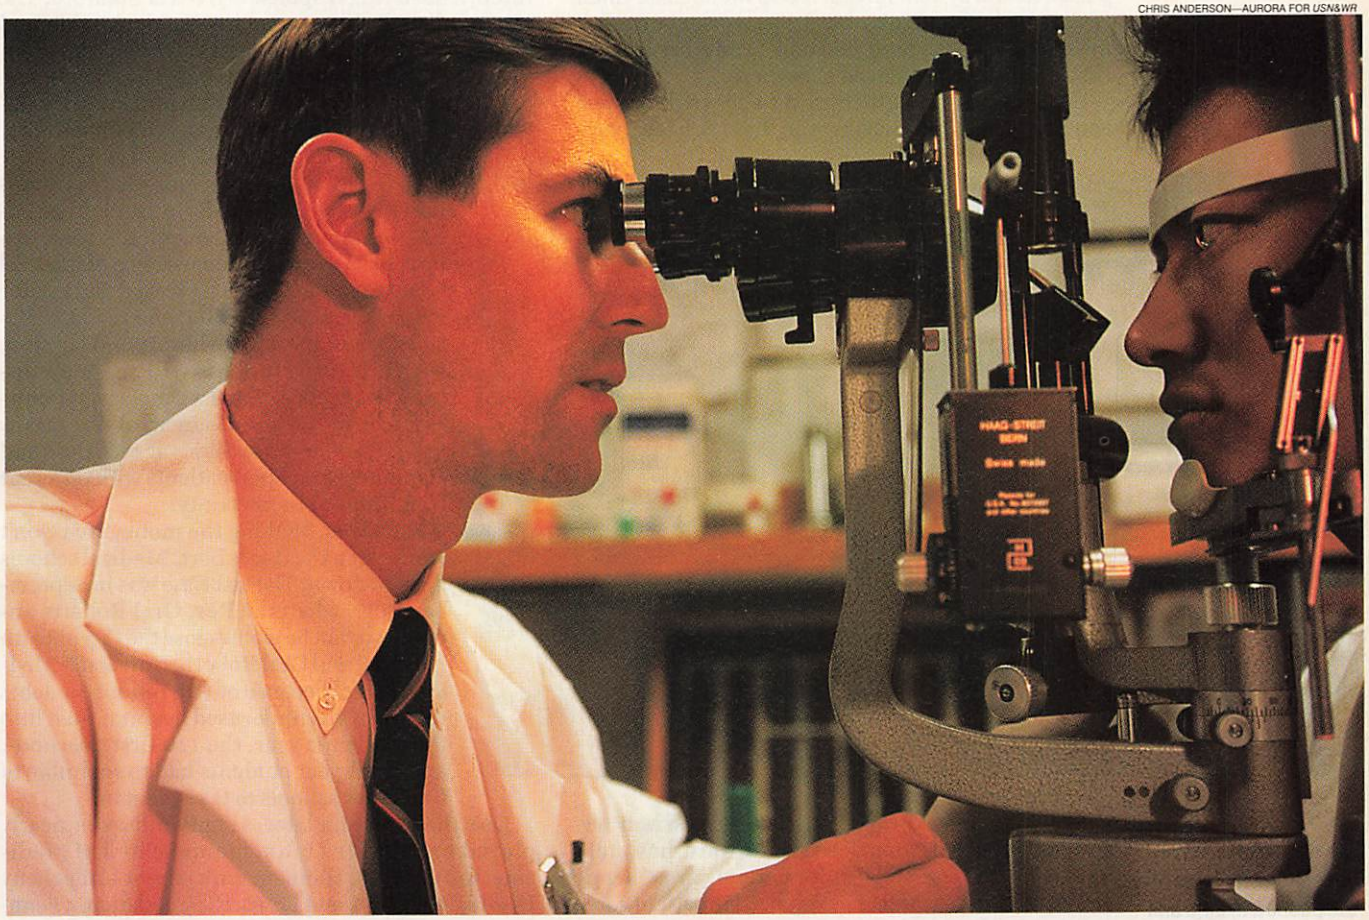
Wilke-Shapiro has guided parents, neighbors, teachers, and social-service organizations through a planning process to design the new building—his architectural thesis—and worked with them to develop a long-term vision for the community, the culmination of his social-work education. "I'd like to work in city government, in a planning department or a neighborhood housing corporation," he says, "looking at issues, not just buildings."

For all the changes that managed care has forced on social work, the field may play a role in shaping the future of managed care, too. That's what Shanti Khinduka, dean of the George Warren Brown School of Social Work at Washington University, believes. "It is my strong hunch," he says, "that if [the benefits of] social work were scientifically documented, the very cost-conscious groups in society would discover, as is clear with employee assistance, that social work is a bargain. For so little, so much is delivered." ●

Money woes in academe

The health of your medical school may be shakier than you think

CHRIS ANDERSON—AURORA FOR *USN&WR*



SECOND CHANCE. **Pete Bouvier, 38, was set to start his residency at Manhattan Eye, Ear, and Throat Hospital. Then came word it was closing.**

By Avery Comarow

For more than 15 years, the medical center ignored students' complaints about the sad state of the instructional facilities. The library's computer system was hopelessly obsolete, and the library itself had no bathrooms or air conditioning. Informal gathering spots where medical students could meet with faculty and researchers were nonexistent. Rather than learn using the latest computer technologies, students used "wet labs" from a previous era in which staining and centrifuging were done at the bench. Fed up, students circulated a petition in late 1998 demanding action. "We got involved because we *love* the place," says fourth-year medical student Michael Ennen.

The "place" is hardly some second-rate institution. It is Stanford University Medical Center, long one of the nation's premier teaching facilities. The issue—limited dollars—should be of great interest to anyone considering a career in medicine, because Stanford is only one example of how questionable priorities and financial pressures are harming the health of some medical schools and their affiliated teaching hospitals. Premedical students certainly won't spot the warning signs by reading a school's handouts. But checking the Web and asking the right questions of the right people will elicit a surprising amount of information (box, Page 59).

Coming toll. Some institutions seem destined to vanish, and soon. Robert McDonald, partner in charge of national health care strategy for consultants PricewaterhouseCoopers, believes that as many as a fourth of the country's academic medical centers will merge or declare bankruptcy within the next five years. Events of the last two years foreshadow this new reality. In March 1999, Mount Sinai Medical Center in Cleveland cut medical students adrift from their clinical rotations when the hospital's ownership filed for bankruptcy and recast Mount Sinai

as a nonteaching facility. This January, Georgetown University Medical Center in Washington, D.C., announced $83.7 million in losses in fiscal 1999. Its teaching hospital is slated for takeover this summer by a regional health system, with yet-unknown consequences for medical students and residents. And in 1998, MCP Hahnemann School of Medicine in Philadelphia faced near-certain shutdown after its parent health system folded. A $50 million last-ditch rescue by Drexel University was worked out, but meanwhile the students had only faculty assurances that they would be placed elsewhere.

Such stories, and others still to be written, are a consequence of giant changes in the U.S. health care system. As managed-care plans have aggressively negotiated reimbursement levels downward, hospitals have collected less and less for patient care. Cheaper outpatient treatment has replaced inpatient care, eroding profits and leaving beds empty. And teaching hospitals were particularly hard hit by the Balanced Budget Act of 1997, which slashed Medicare reimbursements and lowered payments from the government for physician training. By 2002, according to a study by the Association of American Medical Colleges (AAMC), the cuts will cost the average teaching hospital a total of about $43 million and could drive up to 40 percent of them into the red.

Shortsightedness and miscalculations have made matters worse. When managed care forced cost-cutting measures and imposed limits on reimbursements, many institutions bought up local physicians' practices at unrealistically high prices to keep referrals flowing. And because teaching produces no income while high-profile research lures eminent scientists, generates good publicity, and attracts funding, many academic centers emphasized the latter. That's what Stanford did. "We were putting resources into new and improved research facilities," says Michael Hindery, senior associate dean. "Educational facilities were not getting as much."

Michael Ennen and the 225 other students who petitioned for change were not the only ones to have noticed. Deficiencies echoing the student complaints had been noted in 1983, 1991, and 1997 by the Liaison Committee on Medical Education (LCME), which accredits medical schools. Several months after the accrediting body received the students' petition, a blistering response arrived at Stanford. The LCME called the library conditions "deplorable"and went on from there. The LCME advised the medical center that its school had avoided by a single vote having its accreditation lowered to probationary status. Says Hindery: "It clearly was a difficult letter for us to receive."

BARBARA RIES FOR *USN&WR*

CATALYST. **Stanford medical student Michael Ennen, 26, pushed to upgrade the school's decrepit facilities out of loyalty, not resentment.**

In less than a year, a four-year, $75 million plan for a new building and other education-related improvements were approved. "I see a real renaissance of medical education here," says a pleased Ennen, for whom the changes will come too late. Besides a new, up-to-date library and far more space, future students will see "new approaches to educational technology," promises Hindery. "We're not sure what that means as yet," but laptop facilities at each desk and computer-simulated patients with different conditions are a certainty.

No leaves. Shaking the money tree won't work when the tree is bare. Medical schools do shut down. The last time was in September 1989, when the Rev. Oral Roberts announced that he would close the City of Faith Hospital and Oral Roberts University Medical School because of $25 million in debts run up by the underused hospital. Just into the academic year, the 120 first-, second-, and third-year students had to scramble to find other schools to take them in.

Less than 10 years later, a similar disaster nearly played out at MCP Hahnemann School of Medicine. In July 1998, Hahnemann's parent—Allegheny Health, Education, and Research Foundation, a Pennsylvania health system that owned 14 hospitals, hundreds of physicians' practices, and Hahnemann—filed for bankruptcy, with debts totaling $1.3 billion. The state's largest medical school, with more than 1,000 students, seemed doomed. In October 1998, prodded by politicians and medical interests, Tenet Healthcare, a national health system, purchased Allegheny's Philadelphia holdings and reluctantly forged an agreement with Drexel University to run the medical school. But it had been a near thing.

"This is something no medical student should ever have to go through," says John Po, 28, who had just completed his second year at Hahnemann when the bankruptcy news hit. Numerous faculty members fled, disrupting the teaching process. The patient population fell as physicians and their patients steered clear of the ailing system, leaving fewer cases from which each student could learn. "The students want stability," Po says, and under Drexel's management, "that seems to be happening." Recruiting for new teaching, clinical, and research faculty

is in full swing, says new medical school dean Warren Ross. "We've moved on," he says. "We're building a new medical school."

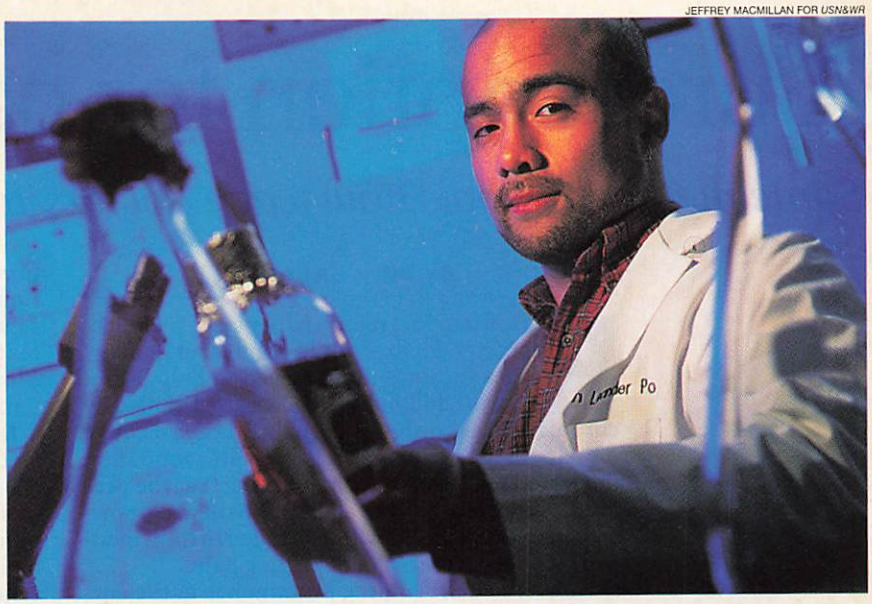
When Mount Sinai in Cleveland became a nonteaching hospital, 60 to 70 medical students from Case Western Reserve School of Medicine lost their clinical rotations. Case Western had to find room for them at its other affiliated hospitals—a particular problem in obstetrics-gynecology, says Jay Wish, a professor of medicine who had to sort out the chaos. The displaced OB-GYN students had to join existing teams, so each medical student participated in fewer deliveries, Caesarean sections, and other procedures.

Homeless residents. Finding new places for residents is even more difficult. Each teaching hospital takes a carefully limited number, to make sure residents will be able to treat enough patients—and the hospital receives federal funds only for that many slots. In April 1999, when the board of Manhattan Eye, Ear, and Throat Hospital announced that the renowned teaching hospital would close, Pete Bouvier, 38, was one of 54 residents left scrambling to find a new home. After serving five years in the Air Force as a flight surgeon, Bouvier had cut his separation papers. He flew back with his pregnant wife from their home in Germany into a firestorm of outrage from the hospital's staff physicians, who were frantically pulling strings to find places for the residents, including 12 "first-years" like Bouvier. Several discouraged residents abandoned the practice of medicine. Others changed specialties to get in elsewhere. Bouvier was fortunate. He ended up, along with two other first-year ophthalmology residents, at New York Presbyterian Hospital-Cornell University Medical College.

The doctors of Manhattan Eye and Ear went to court to keep the hospital open, and earlier this year they prevailed. It was too late for most of the residents. "I'm locked into the Cornell program," says Bouvier. "I feel loyal to them, and they've treated me great. But it's not where I had hoped and planned to go." In a report sent last year to medical centers, the Accreditation Council for Graduate Medical Education—the LCME's counterpart for residency programs—worried about "the specter of program closures on a larger scale."

Like a man headed for a heart attack unless he changes his habits, teaching institutions have to adopt a leaner lifestyle. Many have gotten the message, and most premeds and their school of choice will flourish together. But they will be entrusting the next four years of their lives to one medical school. They need to know what they're getting into. ●

JEFFREY MACMILLAN FOR *USN&WR*



CLOSE CALL. **John Po, 28, is chasing an M.D. and a Ph.D. in biology. Last year his medical school barely stayed open.**

EXPLOITING THE WEB

A medical-school checkup

Sniffing out problems at a medical school you might attend isn't as much of a chore as you might think, especially with the help of the Web. Here's how to do it.

● **Tap into applicants' impressions.** At *www.interviewfeedback.com,* premed students who have visited schools fill out questionnaires about the experience. Their insights can tip you off to hot-button issues on campus, such as the outdated physical facilities that put Stanford Medical Center at risk of probation.

● **Have online chats.** Premed students can post questions about schools and participate in live chats with current students and other applicants at sites like S2S *(www.s2smed.com)* and *www.premedstudent.com.*

● **Find a mentor.** The American Medical Student Association (*www.amsa.org*) has introduced a program that matches premed students with an AMSA member who can offer insights and advice about specific schools.

● **When you visit, probe.** Don't quiz students only about the quality of teaching and their experience in the hospitals. Ask whether anything is afoot that might compromise the program.

● **Check the accreditation calendar.** The Liaison Committee on Medical Education, which accredits U.S. medical schools, posts a schedule of upcoming visits on the Web (*www.lcme.org*). Before the accreditation committee arrives, the administration must survey students to get their views. Opinions will be circulating through the student body, and you can probably hear them if you raise the subject online or on campus.

● **Yes, ask your interviewer.** But tone is important. AMSA President David Grande suggests something like this: "With all the news about teaching hospitals losing money, I'd be curious about what impact it might have on my education."

● **Call a broker.** If the medical center has floated bond issues, agencies such as Moody's gave the bonds a rating based on the institution's soundness. Any broker can find out and interpret the ratings for you. *–A.C.*

A prescription for pain

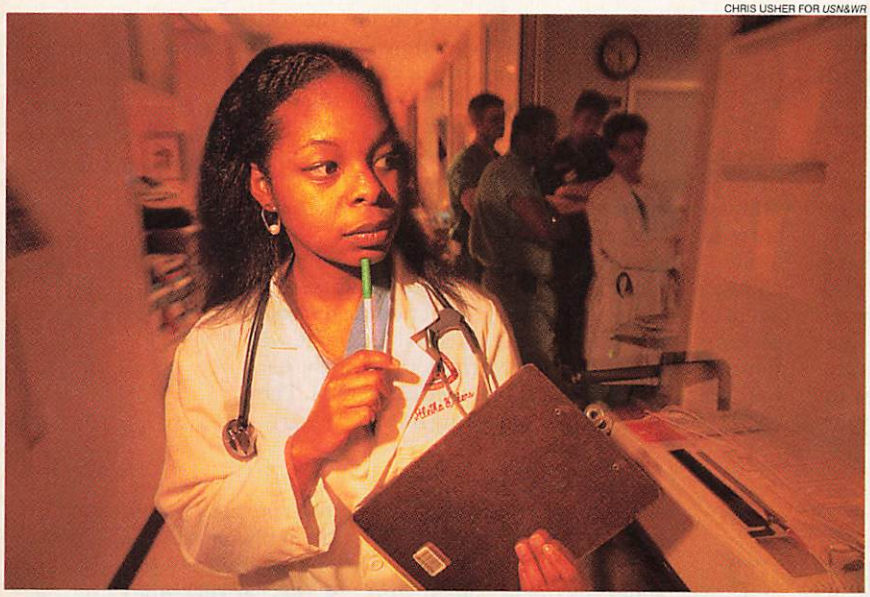
Some medical schools now teach doctors-to-be how to offer relief

By Beth Brophy

Pain is the No. 1 reason patients see their doctors, yet doctors would admit that in many cases they are ill-equipped to help. More than 50 million Americans are disabled by chronic pain, according to Fenella Rouse, executive director of the Mayday Fund, a private foundation dedicated to reducing their suffering. Yet the profession, concerned about addicting patients to powerful narcotics, historically has failed to train medical students in the art of managing pain.

Now, it's an art gaining prominence in the curriculum. A growing consensus among physicians and public policy makers defines pain as a condition meriting treatment—not just a symptom—and holds that the vast majority of patients can be helped quite safely using drugs. This year, the body that accredits hospitals and nursing homes will implement new standards for the management of pain: Hospitals, for example, will be required to ask patients if, where, and how much they are hurting and to do whatever possible to ease any suffering. Late last year, the House of Representatives passed the Pain Relief Promotion Act, which would protect a doctor who practices physican-assisted suicide according to rigorous standards and would legitimize the use of opiates and controlled substances in treatment. For the first time last September, a doctor in Oregon was disciplined by a state board for undertreating pain in his patients. And the licensing exams that doctors-in-training take are starting to include questions on pain and end-of-life care. Thus, medical schools have a "strong incentive to do a better job teaching in these areas," says psychiatrist Susan Block, an expert on palliative care at Dana-Farber Cancer Institute in Boston.

CHRIS USHER FOR *USN&WR*



BETTER ARMED. **Johns Hopkins student Aletha Akers has gained a fuller sense of what causes pain and what interrupts it.**

Not a fringe. Nearly all of the country's 125 accredited schools devote a minimal amount of class time to death and dying issues, but only Beth Israel Medical Center in New York, a teaching hospital, has a department dedicated to pain and palliative care. "The ideal would be that every medical school has a department, and [that pain] is not viewed as a fringe item," says David Weissman, director of palliative care in the division of hemotology-oncology at the Medical College of Wisconsin. The school is one of a handful that have begun providing students with a more comprehensive understanding of what causes pain and how it can be alleviated.

"I learned it was possible to control pain, but the side effects were dramatic," says Aletha Akers, 28, a fourth-year medical student at Johns Hopkins University, which has created a mandatory course of study on pain management. Students learn, for example, which nerve pathways carry pain information and where along the pathways various drugs work. When Akers rotated through the surgical intensive care unit, for example, she helped treat a woman with bone cancer whose femur had been removed; one effect was excruciatingly painful blisters. The pain could be dulled by ketamine, Akers learned, but the potent drug could—and did—cause hallucinations.

Harvard students take a minimum of five hours of classes on pain and palliative care during their first and third years, which, as at Hopkins, is supplemented by bedside training. These subjects are also integrated into courses on pharmacology, ethics, and death and dying. One course matches students with a patient suffering from a life-threatening illness; the student follows the patient for a semester to monitor pain levels and treatment. Stanford University, Case Western, and Oregon Health Sciences in Portland are also in the forefront on pain management and palliative care.

The remaining challenge for many schools interested in adding pain management will be to overcome a shortage of qualified faculty, a dearth of research on chronic pain, and the competition for space in an already-crammed medical-school curriculum. Respect for the discipline, at least, is slowly being won.●

9. University of Iowa
9. Univ. of Michigan–Ann Arbor
9. University of New Mexico

METHODOLOGY

U.S. News *produces two rankings of medical schools. All 125 accredited medical schools in the United States are considered for the overall ranking. These 125 schools plus the 19 schools of osteopathic medicine are considered for the primary-care ranking. The rankings use measures of academic quality and weights as described below. Research activity is a measure used only in the overall rankings; the percentage of students entering internal medicine, family practice, and pediatrics is a measure used only in the primary-care rankings. An overview of our methodology appears on Page 11.*

- **Reputation** (40 percent): Academic reputation was measured through two kinds of surveys conducted by *U.S. News* in the fall of 1999. In the first, medical school deans and senior faculty were asked to rate each school's overall academic quality, as well as the quality of its primary-care program, on a scale of "marginal" (1) to "distinguished" (5). The response rate was 51 percent for medical schools and 68 percent for osteopathic schools. A school's average score accounts for 20 percent of its overall rank and 25 percent of its primary-care rank. In the second survey, sent to residency program directors, respondents were asked to select either the 25 best medical schools or the 25 best primary-care schools. Forty-five percent responded to the best medical schools survey, 31 percent to the primary-care survey. Their opinions account for 20 percent of a school's overall rank and 15 percent of its primary-care rank, respectively.
- **Research activity** (30 percent of overall rank): This indicator is measured as the total dollar amount of National Institutes of Health research grants awarded to the medical school and its affiliated hospitals, averaged for 1998 and 1999.
- **Primary-care rate** (30 percent of primary-care rank): The percentage of M.D.'s from the school entering primary-care residencies, averaged over 1997, 1998, and 1999.
- **Student selectivity** (20 percent of overall rank, 15 percent for primary care): This indicator consists of three components, which describe the class entering in fall 1999: mean composite Medical College Admission Test score (65 percent of this measure), mean undergraduate grade-point average (30 percent), and the proportion of applicants accepted into the program (5 percent).
- **Faculty resources** (10 percent of overall rank, 15 percent for primary care): This indicator is the ratio of full-time science and clinical faculty to full-time students in 1999.
- **Overall rank:** To obtain its overall score, the school's score on each indicator was first standardized. The standardized scores of each indicator were weighted, totaled, and rescaled so that the top-scoring school received a 100 and other schools received a percentage of the top school's score.
- **Specialty rankings:** To rank specialties, *U.S. News* asked medical school deans and senior faculty to identify up to 10 schools offering the best programs in each specialty area. The 10 schools receiving the highest number of nominations appear in the tables. Each school verified its specialty offerings.

Methodology

Rankings in the health professions are based on the results of surveys sent to deans, faculty, and administrators of accredited graduate programs. Respondents were asked to rate the academic quality of programs as distinguished (5 points); strong (4); good (3); adequate (2); or marginal (1), based on their own assessment of the quality of curriculum, faculty, and graduates. Individuals who were unfamiliar with particular programs were instructed to select "don't know." Scores for each school were averaged across all respondents who rated that school.

In the fall of 1999, surveys were conducted for audiology programs accredited by ASHA, the American Speech-Language-Hearing Association (response rate: 57 percent); community health programs accredited by CEPH, the Council on Education for Public Health (50 percent); health services administration programs accredited by AUPHA, the Association of University Programs in Health Administration (71 percent); nursing programs accredited by NLNAC, the National League for Nursing Accrediting Commission (53 percent); physical therapy programs accredited by APTA, the American Physical Therapy Association (52 percent); physician assistant programs accredited by the Commission on Accreditation of Allied Health Education Programs (75 percent); rehabilitation counseling programs accredited by CORE, the Council on Rehabilitation Education (66 percent); schools of public health accredited by CEPH (57 percent); master of social work programs accredited by CSWE, the Council on Social Work Education (53 percent); speech-language pathology programs accredited by ASHA (45 percent); and veterinary schools accredited by AVMA, the American Veterinary Medical Association (64 percent). The rankings in occupational therapy are based on results of a survey conducted in 1997. Only fully accredited programs in good standing at the time of publication are ranked. For nursing, only master's programs were surveyed. The surveys were conducted by Market Facts Inc.

A robust future for health pros

The field will grow twice as fast as the overall economy

BY JEANNYE THORNTON

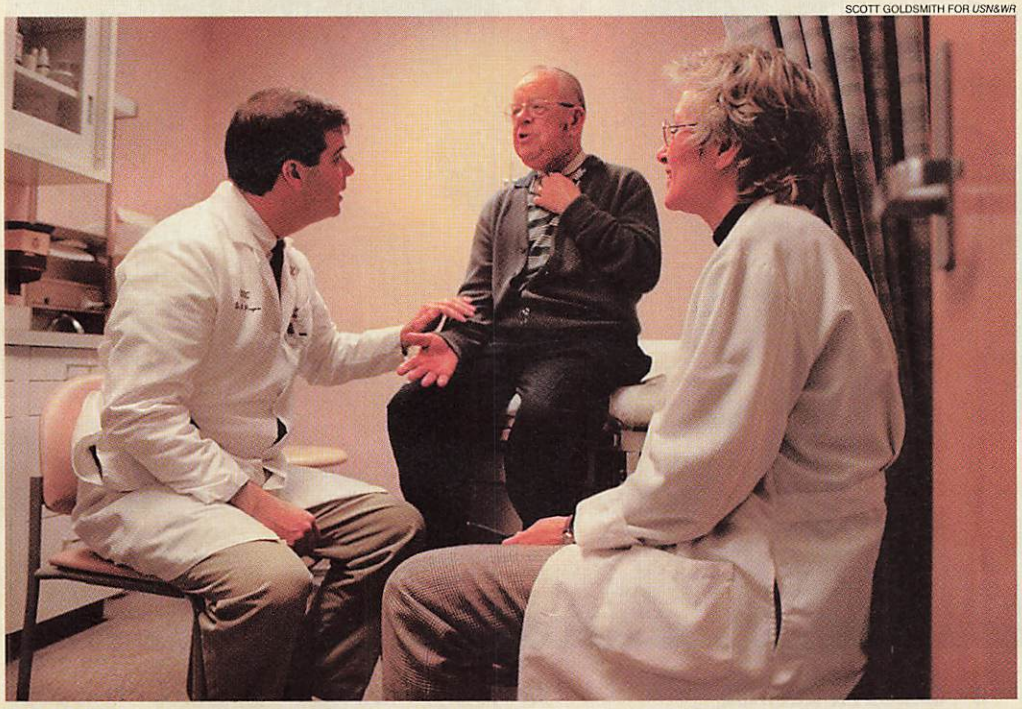
The prognosis for health professionals is extremely good—and that's an understatement. By 2006, the multifaceted sector will grow at twice the rate of the economy, adding 1 in every 6 new positions. Here are five fast-growing specialties to watch:

Clinical investigators. These are the doctors, nurses, pharmacologists, psychologists, and social workers who conduct clinical trials of new drugs and medical devices. It was their work that discovered the benefit of administering aspirin during heart attacks, for example, and the life-extending "cocktail therapy" for patients with HIV. The biotechnology revolution has created so many possibilities for treating disease that the National Institutes of Health has recently begun funding training programs in clinical research at 35 medical schools and hospitals. Researchers are needed by hospitals, academic centers, and pharmaceutical companies; and salaries can range from $80,000 to $160,000 or more.

Acute-care nurse practitioners. They're cheaper than doctors—which makes these nurses highly valuable to hospitals and HMOs. The first certificate was awarded as recently as 1995; since then, more than 60 schools have created programs to meet the demand. The ACNP credential allows a nurse to handle much of a hospitalized patient's treatment—as the salary potential indicates. A study by Ruth Kleinpell-Nowell, who teaches at Rush University College of Nursing in Chicago, showed that the average pay one year after certification was nearly $60,000; some nurses made $100,000.

Geriatricians. By 2040, there will be 70 million Americans age 65 and older—double the current number—and some 3 million of them will be at least 85. Yet only 1.2 percent of the country's doctors, or 8,800, are certified in geriatric medicine. The relatively low pay in the field now may steer medical students elsewhere: The average geriatrician makes about $160,000, compared with $225,000 for a surgeon and $230,000 for a radiologist. The discrepancy may narrow if the Alliance for Aging Research is right in its prediction that 36,000 geriatricians will be needed in decades ahead.

SCOTT GOLDSMITH FOR *USN&WR*



ALL OF HIM. Dr. Kirk Payne and nurse Cheryl Mummey care about Galen Sinram's emotional health, too.

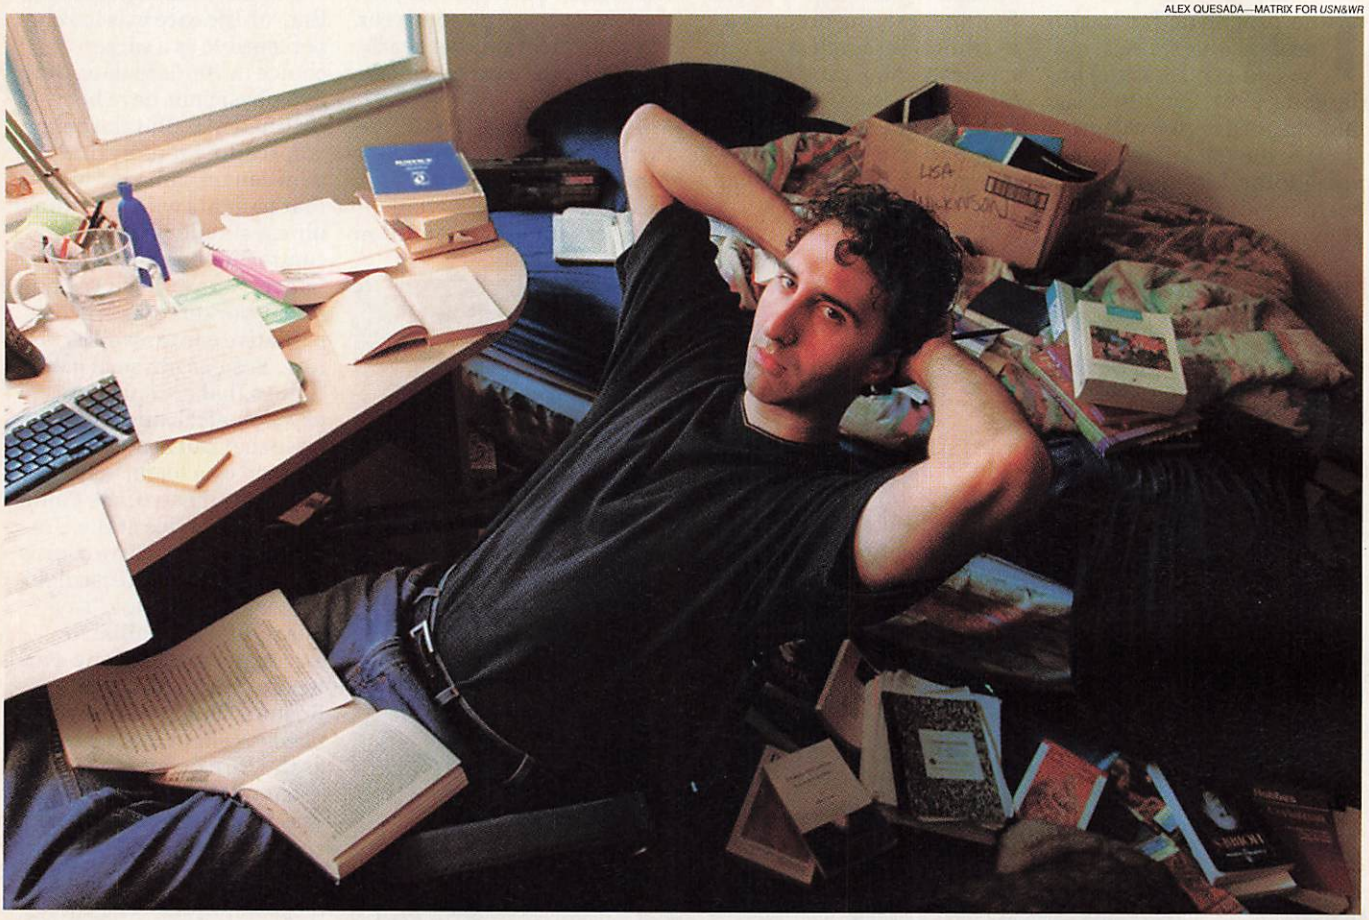
Palliative-care specialists. End-of-life care was barely perceptible as a career choice in 1990; to date, only 625 physicians have been certified in it. But the belief is spreading rapidly that pain can be managed and that patients with a terminal illness should be made as comfortable as possible (story, Page 60). Nurses and social workers specialize in palliative care as well as doctors. Besides physical pain, "issues that are spiritual, psychological, and social arise that can best be addressed by a team," says Kirk Payne, 37, head of the Palliative Care Service at the University of Iowa. "Everyone is not going to need a cardiologist or a skin doctor," says Susan Block, a palliative-care expert at the Dana-Farber Cancer Institute in Boston. "But everyone will need excellent medical care as they are dying."

Informaticians. Instant access to individual medical records, to data on patient populations, and to journal articles can make a huge difference in how efficiently diagnoses are made and how effective—and costly—treatment is. These pros, who marry computer science with medicine, provide the access. "The job market is very strong—industry has figured out that this is a skill it really needs," says Dr. Ted Shortliffe, who heads the Department of Medical Informatics at Columbia Presbyterian Medical Center in New York. He points out that in academia, a Ph.D. in informatics will garner $80,000 to $100,000; in industry, perhaps $110,000 or more. ●

Science & Humanities

The pursuit of a Ph.D. entails much more than classes and research

ALEX QUESADA—MATRIX FOR *USN&WR*



OVERWHELMED. **Ph.D. student Jason Sears had to teach two classes last semester besides pursuing his own studies.**

By Carolyn Kleiner

Like many prospective Ph.D.'s, Lauren Wittenberg arrived on campus a bit starry-eyed—dizzy with love of her discipline, psychology, and eager to fulfill a calling to the academy. She dreamed of becoming a professor at a high-powered research institution, of standing in front of packed classrooms, lecturing undergraduates about the nature of prejudice and stereotypes, and then heading to her lab to investigate topics like the social aspects of eating disorders.

Wittenberg wasn't entirely idealistic. She knew long before she entered an experimental psychology Ph.D. program at Dartmouth in 1995 that she was in for years of grueling schoolwork; still, she felt up to the challenge. "I thought, I can put up with 18-hour days, no problem," recalls the Detroit native. But she never anticipated how trying her graduate-school years would be—or that her struggle to get through them would have so little to do with academics.

Indeed, there's much more to earning a Ph.D. than classes and research. Deans and glossy admission brochures may showcase big-name professors, state-of-the-art labs, and top rankings, but often it's the less publicized quality-of-life issues that determine whether students finally obtain their degrees. Although many people have satisfying graduate-school careers, others encounter problems that, while common, are often unexpected—such as abusive advisers, financial difficulties, and exhausting teaching or research workloads. "Many students are quite naive about the realities of graduate-school life," says Chris Golde, a professor of educational administration at the University of Wisconsin–Madison and a leading doctoral-education researcher. That's unfortunate, she says, because the more informed that prospective Ph.D.'s are about these

potential struggles, the better prepared they'll be to choose a program that's right for them.

To be sure, the life of a doctoral student has never been easy. "We dangle our three magic letters before the eyes of these predestined victims, and they swarm to us like moths to an electric light," wrote Harvard professor William James in 1903. However, the pursuit of a Ph.D. is increasingly difficult, for a number of reasons: The intensifying pressure to publish is leaving faculty less time for mentoring grad students. With funding drying up in some disciplines, more students are having to get outside jobs and loans to make ends meet. Cash-strapped universities also are shifting more of the teaching burden onto the shoulders of grad students, resulting in grueling schedules and less time for personal studies.

Not surprisingly, the number of years it takes to earn a doctoral degree has increased. In 1998, the average across all fields was 7.3 years, up from 5.9 in 1972. And just half of all Ph.D. candidates today end up obtaining a degree. Individual schools or departments rarely disclose their attrition rates, but researchers have found that they generally are higher in the humanities and the social sciences than in the hard sciences. They also are higher for women and minorities, especially in fields where they are underrepresented.

Crucial choice. Despite the upheaval in doctoral education, one thing hasn't changed: The most important decision a student will make is selecting an adviser. This professor will serve as intellectual guru, employer, and chief advocate during a student's job search. That is, when the relationship works. When it does not, the fallout can be devastating.

Within six months of arriving at Dartmouth, Lauren Wittenberg knew she had a problem with her adviser. She claims he was capricious and volatile: He would tell her to do one thing in the lab one week and another the next; then, she says, he'd deny changing his instructions and berate her for not doing what he'd asked. He would call her stupid, she contends, and belittle her when experiments didn't go as planned. "I walked out of his office, more times than not, and went up to the lab and cried," says Wittenberg, who finally switched advisers after three years and finished up a year later, in the spring of 1999. Her first adviser denies Wittenberg's charges but says he did make it clear that he didn't think she was cut out for academics. Wittenberg says this experience persuaded her to seek a job outside the academy, and she now works as a health policy analyst in Washington, D.C.

Grad students typically have few options when these relationships sour. Only a small number of schools have a well-defined grievance procedure, and even when they do, prospective Ph.D.'s often are wary of filing a complaint against an adviser—afraid of a potentially ruinous effect on their careers. "The power relationship there is all in one direction," says Nick Repak, director of Grad Resources, a Dallas-based organization that provides time- and stress-management seminars and other support to students at a handful of schools across the country, including the University of Texas–Austin and the University of Washington–Seattle.

According to Repak, this power imbalance, along with other emotional and financial pressures, can contribute to a host of problems for graduate students, including depression, dropping out, and even, infrequently, suicide. In 1998, for example, a top student in the chemistry department at Harvard swallowed cyanide after leaving notes blaming his Nobel Prize-winning adviser—and the broad power he wielded over his life and career—for his death. The incident provided a wake-up call for the chemistry department, which moved to an advising system in which three-professor committees evaluate a student's work. A number of other schools, including Michigan State University and the University of North Carolina–Chapel Hill, have since initiated seminars on conflict resolution for students and faculty. Repak also helped start a confidential crisis hotline (877-GRAD-HLP) last year for graduate students, which currently receives about a dozen calls a week.

Even if students have a decent adviser, they aren't guaranteed a happy graduate career. Some female students relate stories of unfair treatment of women in their departments. One, a fifth-year Ph.D. candidate in sociology at State University of New York–Stonybrook, claims she and a male colleague were given markedly different duties while working together as teaching assistants for a course. "He was helping to write tests and seeing students for office hours, [while] I took notes and Xeroxed," she recalls. A former sociology student at one Southwestern university relates how, as a newcomer, she attended a potluck dinner given by female students, ostensibly to welcome women to the department. "What it was *really* for was to warn [us] about a professor who had a long history of molesting female grad students," she says. Certain institutions are taking steps to improve the climate for female students. The University of Michigan's Graduate Experience Project, for instance, offers faculty in engineering and the physical sciences seminars on sexual harassment and matches up incoming female students with experienced peer mentors.

JIM LO SCALZO *FOR USN&WR*

OIL AND WATER. **Lauren Wittenberg's terrible relationship with her first adviser soured her on finding a job in the academy.**

Some departments can be lonely places for minority doctoral students, who still make up only 9.4 percent of new Ph.D.'s. When Roland Fryer started his doctoral degree in economics at Pennsylvania State University last year, he found himself surrounded by foreign students who, he says, refused to work with him because he is African-American. "Comments were made to me like, 'I don't study with black people; black people are stupid,' " says Fryer. "It was very tough, because problems and homework are meant for group effort." He has persevered, aided by an understanding faculty, but knows many peers who aren't so lucky: "I talk to my friends in other programs and they all say, 'Oh, you're doing the solo thing, too?' "

Roy Diaz also understands what it's like to feel ostracized by fellow students. A sixth-year Ph.D. candidate in physical chemistry at the University of Washington–Seattle, Diaz is one of two Latinos in a department of some 190 graduate students. Time and again, he says, unfriendly peers have insinuated that he's on campus—and in his current research assistant position—merely because he's a minority student. "People always ask, 'How is it you got here?' " explains Diaz, who says he feels added pressure to succeed as a result. "It's not enough to be doing OK, because somehow your abilities are always questioned." Several schools are working to make themselves more minority-friendly. Texas A&M University and the University of Nebraska–Lincoln, for example, are involved in the American Sociological Association's Minority Opportunities Through School Transformation program, which provides institu-

UNITED WE STAND

Students resort to labor unions

Complaining about life as a Ph.D. candidate has long been a popular campus sport. As the hardships mount, however, a growing number of dissatisfied students are actually *doing* something to improve their situation: organizing to demand better working conditions.

Take the graduate students at the University of California. Teaching assistants at all eight UC schools voted to unionize last spring, after a lengthy battle with administrators over their right to do so. The collective bargaining groups are now seeking partial tuition waivers for graduate students, health care plan improvements, and wage increases from the current $1,300 to $1,600 per-month scale.

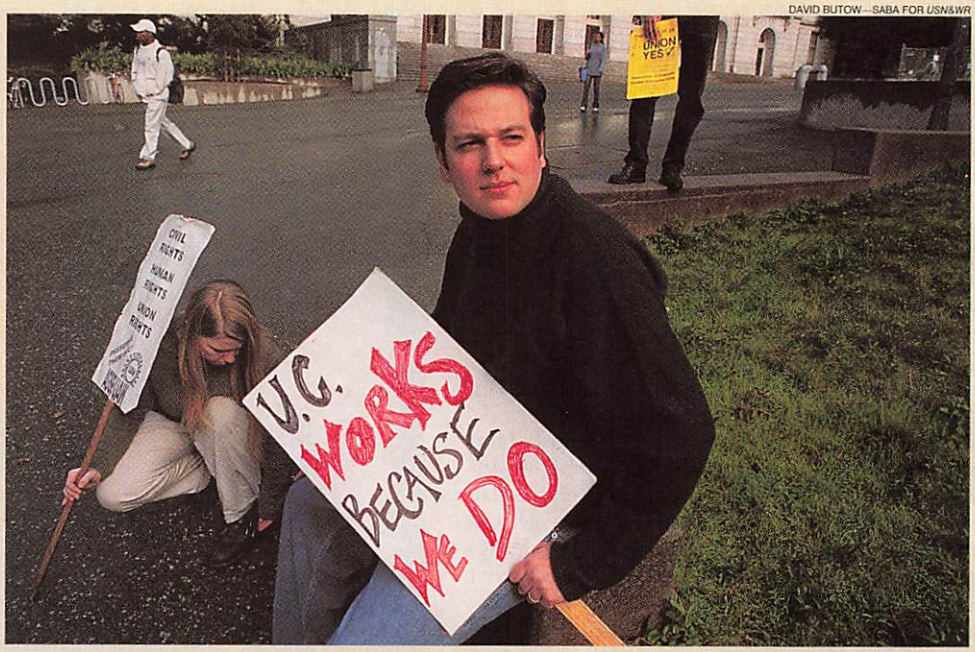
There are currently 22 grad-student unions on over 40 public campuses—including the University of Kansas and Oregon State University—double the number five years ago. Contentious efforts to organize also are underway at two private institutions, New York University and Yale University.

It isn't usually an easy process; many university administrators deeply oppose unions. Robert Berne, vice president for academic development at NYU, believes such groups upset the complex, delicate relationship between graduate students and their advisers. But recent research suggests this is not the case. A study of faculty members at five schools with collective bargaining groups found that some 90 percent of professors believe that unions do not interfere with their ability to mentor or teach grad students.

Other school officials argue that prospective Ph.D.'s don't have the right to organize. "The university does not consider graduate students [to be] employees," explains Peter Goodwin, acting dean of the graduate school at Temple University in Philadelphia, which also is in the midst of a fight over unionization.

Union supporters disagree. "In my time, I have taught well over 300 undergraduate students," says Rob Callahan, a sixth-year Ph.D. student in English at Temple. "To claim that I am not, in fact, an employee, is simply wrong, not to mention insulting." Callahan is hopeful that the Temple group will be recognized this year, and believes that future graduate students will reap the benefits: "It's definitely going to make things better for those who come along down the line." *–C. K.*

DAVID BUTOW—SABA FOR *USN&WR*



ORGANIZING FOR CHANGE. Christian Sweeney is president of the UC–Berkeley grad-student union.

tions with a variety of services, including diversity workshops for faculty and students.

Other Ph.D. candidates share stories of departments where cutthroat competition has replaced camaraderie and any sense of community. Students have been known to steal journal articles from the library so others can't study them, for example, or to throw classmates' papers in the trash instead of handing them in to professors. A sixth-year Ph.D. student in criminal justice at SUNY–Albany says that she was warned from the get-go by seasoned students not to share thoughts about her dissertation with classmates—as ideas had been stolen in the past. "I thought at this level of education people would be supportive, that it would be a great, cooperational environment, but what I found instead was pettiness," she laments. Some competition is healthy, asserts Mark Kelley, president of the graduate student caucus of the Modern Language Association and a Ph.D. candidate in English at the City University of New York. But he speculates that the ultratight job market is driving rivalry to dangerous levels in certain departments.

Genteel poverty. Something else prospective Ph.D.'s aren't likely to read about in glossy brochures is the funding problem that plagues a growing number of doctoral students. Although most schools provide financial aid in the form of fellowships and teaching and research assistantships, the grants may end well before a student gets his degree. At Vanderbilt University in Nashville, for example, psychology students are guaranteed funding for just four years. Jonathan Stadler, currently in his seventh year, has struggled to support himself since his time ran out. Fortunately, his adviser helped find him work as a research assistant in another lab; unfortunately, the research is unrelated to his own. "It makes it hard to focus, because I have to constantly shift gears," says Stadler, who spends his days shuttling between his job and his adviser's lab, on the opposite end of campus.

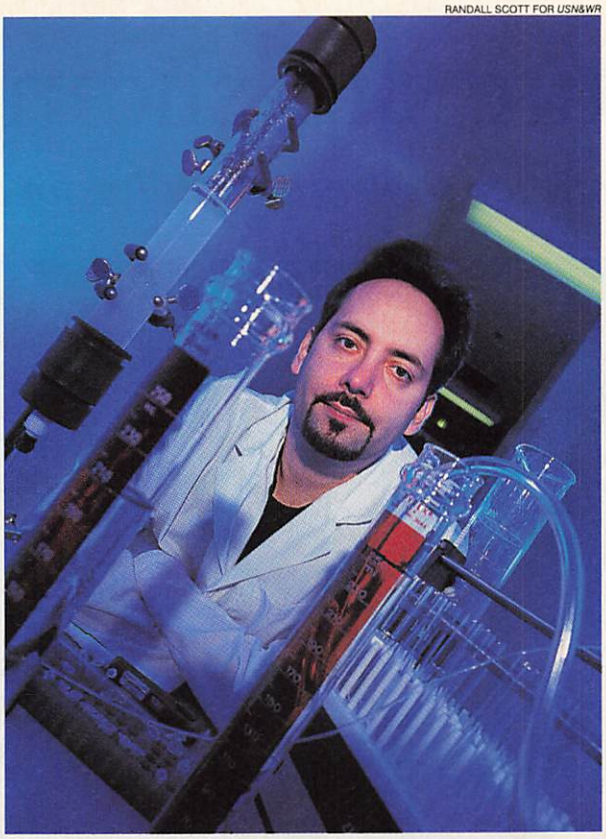
Even when students do have secure funding, they often live at or below the poverty line. As a result, some take part-time jobs like waitressing to stay in school. A growing number of graduate students also are taking out loans: According to the 1998 National Postsecondary Student Aid Study, 20 percent of doctoral students borrowed an average of $9,870 in 1995-96, compared with 12 percent of students who borrowed an average of $6,362 six years earlier.

There's no doubt that graduate assistants are working harder, as schools shift more of the total teaching load their way. Institutions like the University of Iowa and the University of Oregon set the average number of hours that students should work per teaching appointment: In cases where they put in more time, they can file a complaint, which can result in higher pay. However, at other schools, prospective Ph.D.'s must teach or assist in as many as one or two courses each semester—no matter how much time is involved. Jason Sears, for instance, a Ph.D. candidate in philosophy at the University of South Florida in Tampa, found himself overwhelmed with work at the end of last semester. In addition to taking three graduate-level classes and studying for two qualifying exams, he had to teach two undergraduate courses in introductory philosophy. This entailed preparing lectures, holding office hours, and grading class assignments. For all his teaching work, which rarely totaled less than 30 hours a week, Sears was paid the bargain-basement wage of $4,500. "We're considered graduate assistants, which is ironic, because we're not assisting anyone," he says.

Many recent Ph.D.'s—and dropouts—say they wish they'd had a less starry-eyed view of graduate-school life from the beginning. What advice do they offer on how to ferret out crucial information about prospective doctorate programs? Visit departments and talk to a range of people, including professors and a diverse selection of students. Request the names and numbers of recent graduates, who are in the best position to be open and honest about their experiences. Chat with potential mentors and their current advisees; inquire about where past advisees are now working. Get an agreement on funding in writing before enrolling, and, if it includes a time limit, find out how many students finish in the alloted period. Finally, try to get as much data as possible about attrition rates, which vary widely between departments.

The stars may disappear quickly from your eyes, but at least you'll know what to expect once on campus. And you will likely be better equipped to pursue and earn a Ph.D. ●

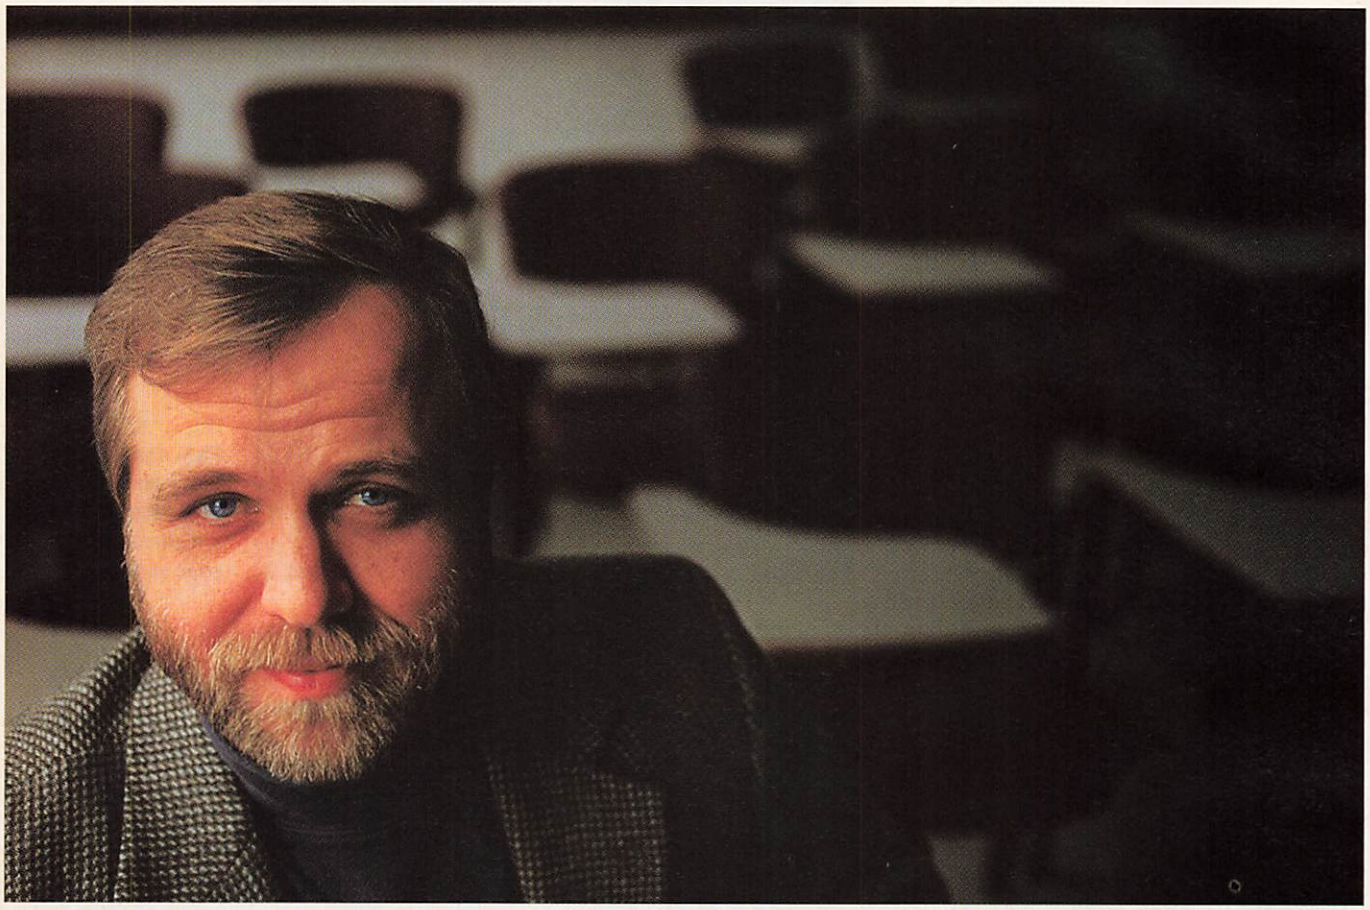
RANDALL SCOTT FOR *USN&WR*



IN THE MINORITY. **Ph.D. candidate Roy Diaz says some of his peers are always questioning his academic abilities.**

Is tenure slip-sliding away?

More academic job seekers are settling for short-term contracts



BETTER, NOT BEST. English lecturer Tim Gustafson is grateful he found a full-time job, but he would prefer to have tenure.

BY BEN WILDAVSKY

In the fall of 1996, the tenure system that is a cherished prerogative of college professors came under assault at the University of Minnesota. The public university's board of regents proposed sweeping changes to faculty employment rules, arguing that administrators needed more flexibility when hiring and firing professors and restructuring academic programs. Faculty members fiercely resisted the plan, which they said amounted to abolishing tenure and its guarantees of long-term job security and academic freedom. "It was a very tense and bitter time," recalls law professor Fred Morrison, a faculty leader during what he calls "the tenure war."

The battle was closely watched around the country as a bellwether of tenure's ability to survive increasing public scrutiny. And tenure's defenders were heartened when the regents and the faculty Senate struck a compromise that entailed only modest revisions to the university's tenure rules.

A matter of proportion. But today, the apparent triumph of tenure at Minnesota is beginning to look less clear-cut. Some professors now fear that the tenure system, having survived a head-on attack, is being eroded through subtler means. Morrison points to a 13 percent drop in the number of tenured or tenure-track professors at Minnesota from 1990 to 1998. He charges that the university has picked up the slack by hiring more non-tenure-track instructors. Arguing that tenure is alive and well, administrators say the reasons for the changing numbers are complex and deny that they've substituted non-tenured for tenured slots. But the faculty is concerned. "We protected tenure; the next issue is what portion of the instructional faculty will stay in a tenure-type appointment over time," says Morrison.

As Minnesota goes, so go universities nationwide.

PHOTOGRAPHY BY KEVIN HORAN FOR *USN&WR*

The majority of newly hired professors still go through a six- or seven-year probationary period during which they must prove their mettle as scholars or seek work elsewhere. But for many academic job seekers, the traditional tenure model can't be taken for granted anymore. A growing number of universities are introducing "post-tenure review." These periodic assessments of tenured professors' performance are intended to ensure that faculty members don't take advantage of their job security by slacking off on their core responsibilities of research, teaching, and departmental service.

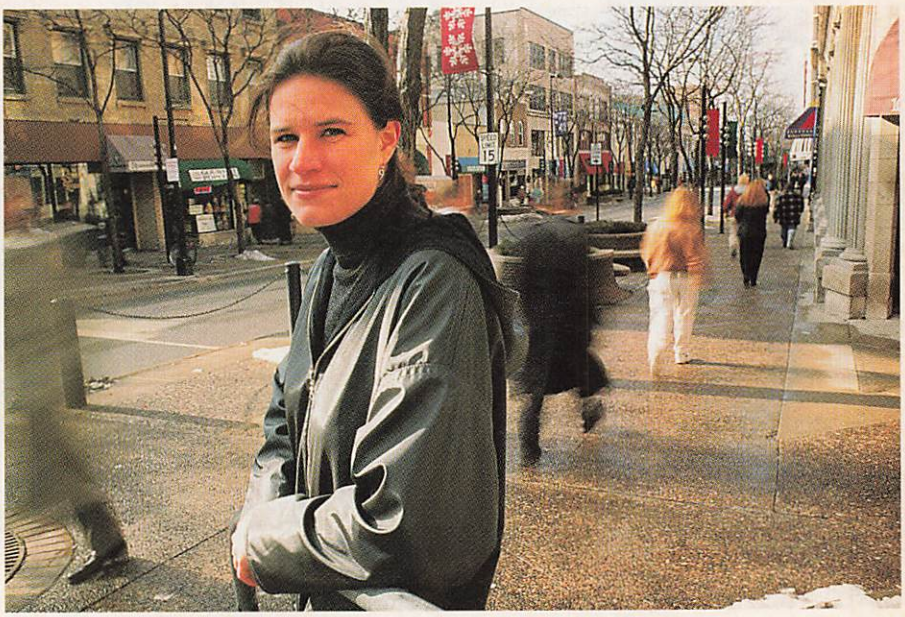
At the same time, campuses are circumventing the traditional tenure system by hiring an ever larger proportion of non-tenure-track instructors. Jack Schuster, professor of education and public policy at Claremont Graduate University in Claremont, Calif., sees a three-tier faculty system emerging at colleges and universities: a core of full-time tenure-track professors; a growing number of full timers without tenure; and a rapidly expanding pool of part-time instructors, sometimes called "freeway fliers" because they may end up teaching at two or more institutions. A recent analysis by Schuster and two colleagues found that about one third of recent full-time hires are in non-tenure-track slots—about twice the proportion among their senior colleagues. Overall, the proportion of full-time faculty in non-tenure-track positions grew from 19 to 28 percent between 1975 and 1995.

Even as employment prospects shift, the long-standing debate over the merits of tenure has not subsided. Cost-conscious state legislators and higher-education reformers continue to denounce it as an inflexible shield protecting unproductive and out-of-touch professors. "Nobody should be granted a lifetime job unrelated to their continuing performance, whether it's in the civil service or in the public schools or in the universities," declares Chester E. Finn Jr., a senior fellow at the Washingon office of the Manhattan Institute. Tenure's defenders, such as Robert O'Neil, a University of Virginia law professor who sits on the academic freedom and tenure committee of the American Association of University Professors, respond that the notion of faculty "deadwood" is largely a myth. O'Neil, a former college president, further asserts that tenure is "an essential guarantor of academic freedom." But as Harvard University higher-education professor Richard Chait points out, this back and forth over tenure is irrelevant to a growing proportion of college and university teachers. "We're having all these lofty debates—and the markets are not waiting," he says.

Tim Gustafson, 39, who earned his Ph.D. in English from the University of Iowa in 1995, would agree that the employment landscape has already changed. He now teaches freshman writing and an introductory Shakespeare course as a non-tenure-track lecturer in Minnesota's English department. He says he's grateful to have a full-time position with benefits and an office but admits that he would "prefer the security of a tenure-line job." Most of his fellow adjunct professors have the credentials for regular tenure-track positions, he argues. "We are where we are," Gustafson says, "because the job market is so tight."

Teaching first. In contrast, 47-year-old biology lecturer Marc Hirrel of Little Rock, Ark., says he's not bothered by his non-tenured status. He works full time at the University of Central Arkansas in Conway on a three-year rolling contract. He's developing a new freshman biology curriculum and teaches four laboratory sections along with a two-semester lecture course. The job works well for someone who is happy to focus on teaching rather than research, he says. Tenure is "not for everybody."

But Hirrel acknowledges that his position might not be appealing to young, academic stars hoping to concentrate on their research. For instance, Kelly Musick, 30, who is finishing up her sociology Ph.D. this year at the University of Wisconsin–Madison, applied for only tenure-track jobs at schools ranging from Duke to Stanford. In December 1999, she accepted a job as assistant professor of sociology at the University of Southern California. Musick enjoys teaching but says she wanted tenure at a research university because "I want to go to a place where I'll have the time and the resources to get my research done."



RESEARCH DRIVEN. **Kelly Musick sought a tenure-track position so that she could focus on her research in sociology.**

Many non-tenure-track instructors say that they feel like second-class citizens. Take Arlene Sindelar, one of 110 non-tenured full timers at Central Arkansas (where there are about 300 tenure-line professors and 130 part-time faculty). Sindelar, who earned her Ph.D. at age 44 from the University of Mississippi in 1997, has been a "visiting assistant professor" for three years in a row now. Her workload is heavier than that of a tenured professor: She teaches four

classes per semester, serves on the search committee for a new history department head, and co-chairs another committee that is setting up teaching workshops. All this leaves her little time for research. "I've been trying to get an article out all year, and I'm not getting anywhere," she says. She enjoys her job but describes it as a "dead-end position." Adds Sindelar: "We are expendable. They could let me go tomorrow no matter how good I am." As a result, she says, "I'm always looking for another job."

Even academics who do make it onto the tenure track face greater scrutiny these days. Many campuses, including public universities in California, Massachusetts, Texas, Florida, Colorado, and Wisconsin, have given a nod in the direction of tenure critics by introducing post-tenure review. At Rutgers University in New Jersey, for instance, at least every five years department heads and administrators review a faculty member's scholarship, teaching, and service to see if they meet the department's current needs. "Tenure doesn't mean the end of accountability," says Rutgers President Francis Lawrence, who successfully pushed for periodic peer reviews of all tenured faculty starting in 1994. Critics of post-tenure review argue the process has no teeth—since tenure guarantees make it extremely difficult to actually fire anybody. Still, proponents say the stepped-up scrutiny is healthy even if it rarely leads to dismissal. "It's intended not just to get rid of people who've gone to seed but also to help them get guidance if they're beginning to slip," says C. Peter Magrath, president of the National Association of State Universities and Land-Grant Colleges.

These changes in the academic job market aren't occurring at the same rate in every field. The highest proportions of non-tenured full timers are found in the health sciences (35 percent) and education (22 percent)—fields that employ many clinical professors who aren't necessarily focused on research, such as doctors who practice at a university-affiliated hospital and teach in the medical school.

Where the jobs are. Limited-term contracts also are more common in fields such as business, where nonacademic opportunities abound, than in disciplines like the fine arts and social sciences. "People in fields where there's a fairly direct path to employment beyond campus are much less concerned about this trend" and, thus, are more amenable to accepting non-tenured positions, says College of William and Mary education professor Roger Baldwin, coauthor with the University of Virginia's Jay Chronister of the forthcoming book *Teaching Without Tenure: Policies and Practices for a New Era*. "It's a lot more difficult for a philosopher to just step off campus one day and find a job." The most recently available figures, from 1992-93, showed that among full-time arts and sciences faculty, the highest proportion of non-tenure-track faculty were in English/literature (22 percent), foreign languages (23 percent), and computer science (21 percent). Experts say these percentages likely have increased.

Nor are the winds of change blowing evenly across all campuses. For instance, established research institutions are unlikely to give up tenure for most of their faculty because it remains a valued benefit for the top scholars that these schools all are competing for. "Any single institution that decided to abolish tenure," says Lawrence, "would have a significant disadvantage when trying to attract faculty members."

In the future, changes in the traditional tenure system are likely to be most keenly felt at second- and third-tier institutions, predicts economist and higher education expert David Breneman, dean of the Curry School of Education at the University of Virginia. "There will be a core of strong institutions that are pretty much invulnerable to market pressure—the Williamses and the Amhersts and the Princetons and the Virginias," he says. Universities outside this inner circle, he says, will increasingly be vying for students with new adversaries such as for-profit distance-learning companies. To survive the competition, they'll need to be flexible—and flexibility and traditional tenure often don't mix well. For prospective faculty members, says Breneman, "it's going to be a different world." ●

MASTER TEACHER. **Marc Hirrel, a non-tenured biology lecturer at the University of Central Arkansas, says tenure "is not for everybody."**

Methodology for Ph.D.'s & Arts

Rankings of master's and doctoral programs in the arts, sciences, social sciences, and humanities are based on the results of surveys sent to academics in each discipline. The questionnaires ask individuals to rate the quality of the program at each institution as distinguished (5); strong (4); good (3); adequate (2); or marginal (1). Individuals who were unfamiliar with a particular school's programs were asked to select "don't know." Scores for each school were totaled and divided by the number of respondents who rated that school.

Surveys in the sciences were conducted in the fall of 1998 by Market Facts Inc. Questionnaires were sent to department heads and directors of graduate studies at schools that had granted a total of five or more doctorates in each discipline during the five-year period from 1992 through 1996. The surveys asked about Ph.D. programs in biology (response rate: 33 percent); chemistry (44 percent); computer science (45 percent); geology (52 percent); mathematics (44 percent); and physics (46 percent).

Surveys in the humanities and social sciences were last conducted in the fall of 1997. Questionnaires were sent to department heads and directors of graduate studies at schools that had granted a total of five or more doctorates in each discipline during the five-year period from 1991 through 1995. The surveys asked about Ph.D. programs in economics (response rate: 48 percent); English (49 percent); history (45 percent); political science (47 percent); psychology (33 percent); and sociology (47 percent).

Surveys in the arts were last conducted in the fall of 1996. In most cases, questionnaires were sent to three people at each school including deans, top administrators, and senior faculty. The surveys asked about master's programs in architecture (response rate: 58 percent); creative writing (51 percent); drama/theater (53 percent); film (51 percent); fine arts (40 percent); and music (43 percent). In architecture, only accredited schools offering the master of architecture degree were included.

Brighter prospects for Ph.D.'s

Even English-literature students manage to land teaching jobs

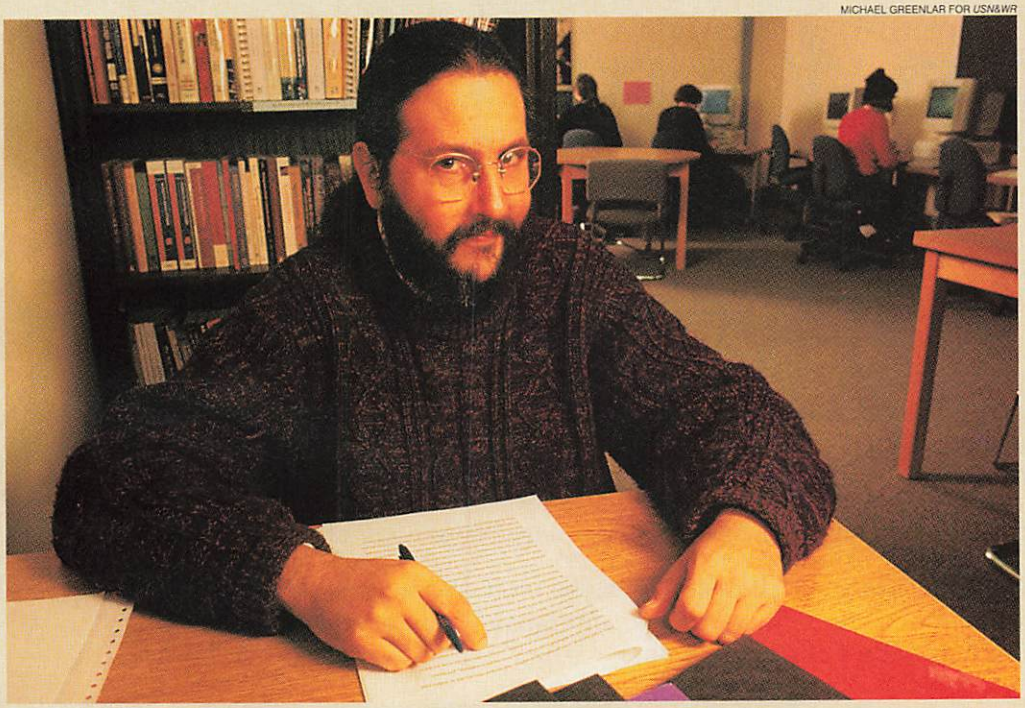
By Marissa Melton

Like most aspiring professors, Adriana Valencia, 24, a grad student at the University of California–Berkeley, shudders at the horror stories about job prospects for new Ph.D.'s. She jokes that with her degree in medieval Arabic literature and fluency in Hebrew and modern Arabic, "I could be unemployed in several geographic locations." But, in fact, the job market is not as depressed as many believe. Even Ph.D.'s in crowded disciplines have many work options. And for those in up-and-coming fields, the job market is wide open.

For students of the humanities and social sciences, landing a teaching job can still be difficult—unless they happen to have studied social work or English composition. Since 1995, about 50 colleges have added social work to their curricula, creating ample opportunities for the 250-plus individuals granted social work Ph.D.'s each year. Ph.D.'s in the growing field of composition and rhetoric also get snapped up as fast as programs turn them out, as more schools focus on ensuring that undergraduates learn to communicate effectively. Seth Kahn, 31, chose Syracuse University's new composition and cultural rhetoric program in part because it was independent of the school's English literature department. "I like lit as much as the next guy," he says, "but it's not what I want to do. I want to teach undergraduate writing and research courses."

Even for students in disciplines where jobs are reputed to be scarce, the outlook is not all bleak. Researchers at Berkeley surveyed 5,854 degree recipients in six fields at 61 universities and discovered that most people with English-literature doctorates were able to get teaching positions in higher education—just not necessarily at large, prestigious universities. Academics say jobs are available if students are willing to look at small schools and community colleges.

MICHAEL GREENLAR FOR *USN&WR*



NO JOBS? NO WAY. Seth Kahn got interested in studying composition after tutoring at a two-year college.

Humanities and social science Ph.D.'s are finding work in industry, government, and nonprofits as well. Social scientists go to work in corporate human resources divisions, handling touchy issues like diversity and sexual harassment. Social scientists are also in demand at think tanks like Rand, which last year hired 15 social scientists.

Scientists of all stripes still have the best job options outside academia. Ph.D.'s in organic and analytical chemistry are sought after, thanks to aggressive hiring by pharmaceutical companies, which are developing drugs for aging baby boomers. Information technologists are also in demand. *Computerworld* magazine predicts that, nationwide, IT staffs will increase by an average of 13 percent this year.

Computer scientists who choose to go into teaching will find that jobs are plentiful. Forced to compete with industry, universities are struggling to recruit and retain professors. As a result, salaries for computer science faculty can be as much as $220,000 a year, according to the Computing Research Association, which is made up of academic computer science departments.

Regardless of your discipline, career counselors say there are ways to enhance your marketability:

- **Dabble in another field.** Ph.D.'s who develop some expertise in a professional area like criminal justice or medicine typically find it easier to land a job than those who focus solely on their main area of study.
- **Get out of the library or lab.** The most interesting part of graduate school might be the research, but knowing how to write grant applications or evaluate program plans and outcomes can pay off in the business world and at universities and nonprofits.
- **Teach beginners.** If you join the academy, you'll be drafted to teach freshman-level courses. And in industry, your expertise is only valuable if you can relate it in layman's terms. ●

U.S. NEWS & WORLD REPORT SCHOLARSHIP PROGRAM

U.S. NEWS & WORLD REPORT

U.S. NEWS WILL FUND THREE (3) SCHOLARSHIPS TOTALING $10,000 TO BE USED FOR GRADUATE STUDY DURING THE 2001-2002 ACADEMIC YEAR.

Scholarships totaling $10,000 ten thousand DOLLARS

ELIGIBILITY ▶ Applicants must be college seniors or graduates who will enter graduate programs of study at accredited colleges or universities during the 2001-2002 academic year. Students already enrolled in graduate programs are ineligible to participate.

Selection of recipients by Citizens' Scholarship Foundation of America Inc. (CSFA)

Scholarship recipients will be selected on the basis of academic record, participation in college and community activities, and essay. Recipients are selected solely by CSFA and the decisions are final.

AWARDS ▶ Three (3) scholarships will be awarded — $5,000, $3,000, and $2,000. The awards are for one year only. The scholarships may be used to pay for graduate study tuition only.

HOW TO APPLY ▶ The application process is simple. Print out the application form you will find at our Web site (*http://www.usnews.com/usnews/misc/scholar.htm*) or request one using the attached request card. Complete and submit the application form, along with a transcript of undergraduate grades and an essay, to the scholarship administrator, CSFA. See the *U.S. News* Web site or request the rules and an application for further details.

(If reply card is missing, please send a postcard with your name, address, day and evening telephone numbers, and E-mail address to: U.S. News & World Report, Graduate Scholarship Program 2001, Attn: Erin Martin, 450 W. 33rd Street, New York, NY 10001.)

Which career suits you?

The Campbell™ Interest and Skill Survey might suggest an answer

You've got your college diploma. Now, where should you go with it? Many new graduates can benefit from some navigational assistance as they try to plot a course into graduate school or the job market. On the pages that follow, *U.S. News*, in conjunction with National Computer Systems Inc. of Minneapolis, a leading provider of career interest surveys, offers readers an opportunity to discover the career best suited to their skills and interests.

Created by David Campbell, a career-planning expert at the nonprofit Center for Creative Leadership in Colorado Springs, Colo., the Campbell™ Interest and Skill Survey consists of 320 questions and should take about 35 minutes to complete. After it is returned with payment, NCS will send test takers a package that includes a 12-page report analyzing their skills and interests along with a separate career-planning guide. Readers are permitted to make up to 10 copies of the questionnaire if more than one person wants to fill it out. Each copy must be mailed in a separate envelope, with separate payment. Instructions for payment and mailing appear at the end of the survey.

PART I—INTERESTS

The major purpose of this section is to assess your interests to determine the areas of work where you would be most likely to find satisfying activities.

Following are lists of occupations, school subjects, and varied work activities. Indicate how much you like each item by using the following scale:

L = STRONGLY LIKE
L = Like
l = slightly like
d = slightly dislike
D = Dislike
D = STRONGLY DISLIKE

Circle the letter corresponding to your answer. Don't worry about how good you would be at the activity, or whether you would be successful—just whether or not you would enjoy doing it. Don't think about how much money you might make, or how much status or prestige would be involved. Base your answer solely on how much you would like it.

Work quickly. Your first impression is generally most useful. You may wish to look up from your paper every now and then and take a short break. This will help you stay fresh and alert.

1. An actor or actress, performing on the stage, TV, or in movies ..... **L** L l d D **D**
2. An architect, designing new homes and buildings ..... **L** L l d D **D**
3. An artist, creating works of art ..... **L** L l d D **D**

71. A realtor, selling private homes ..... **L** L I d D **D**

72. A religious leader, preaching about spiritual life ..... **L** L I d D **D**

73. A reporter, writing articles for a newspaper ..... **L** L I d D **D**

74. A restaurant manager, in charge of a well-established restaurant ..... **L** L I d D **D**

75. A sales executive, overseeing a chain of retail stores ..... **L** L I d D **D**

76. A school principal, managing teachers and students ..... **L** L I d D **D**

77. A singer, performing with a band in dinner clubs ..... **L** L I d D **D**

78. A speech instructor, helping people improve their speaking techniques ..... **L** L I d D **D**

79. A state governor, directing state affairs ..... **L** L I d D **D**

80. A stockbroker, advising clients on their investments ..... **L** L I d D **D**

81. A symphony conductor, leading a symphony orchestra ..... **L** L I d D **D**

82. A technical writer, preparing scientific manuals ..... **L** L I d D **D**

83. A top executive, managing a large corporation ..... **L** L I d D **D**

84. A trial lawyer, arguing cases in court ..... **L** L I d D **D**

85. A university president, overseeing a major university ..... **L** L I d D **D**

For questions 86 through 128, indicate how you would feel about studying each of these school subjects by choosing one of the following responses:

Y = **YES, YES, I definitely would like to study this subject.**
Y = YES, I would like to study this subject.
y = yes, I feel slightly more positive than negative about studying this subject.
n = no, I feel slightly more negative than positive about studying this subject.
N = NO, I would not like to study this subject.
N = **NO, NO, I definitely would not like to study this subject.**

Don't worry about your ability, just whether or not you would enjoy studying the subject.

86. Advertising ..... **Y** Y y n N **N**

87. Agriculture ..... **Y** Y y n N **N**

88. Algebra ..... **Y** Y y n N **N**

89. Architecture ..... **Y** Y y n N **N**

90. Art ..... **Y** Y y n N **N**

91. Auto Mechanics ..... **Y** Y y n N **N**

92. Beauty and Hair Care ..... **Y** Y y n N **N**

93. Chemistry ..... **Y** Y y n N **N**

94. Child Development ..... **Y** Y y n N **N**

95. Computer Science ..... **Y** Y y n N **N**

96. Cooking ..... **Y** Y y n N **N**

97. Creative Writing ..... **Y** Y y n N **N**

98. Electronics ..... **Y** Y y n N **N**

99. Engineering ..... **Y** Y y n N **N**

100. First Aid ..... **Y** Y y n N **N**

101. Foreign Languages ..... **Y** Y y n N **N**

102. Forestry ..... **Y** Y y n N **N**

103. Group Dynamics ..... **Y** Y y n N **N**

104. Hotel Management ..... **Y** Y y n N **N**

105. Law Enforcement ..... **Y** Y y n N **N**

106. Leadership ..... **Y** Y y n N **N**

107. Literature ..... **Y** Y y n N **N**

108. Marketing ..... **Y** Y y n N **N**

109. Martial Arts (Judo, Karate, etc.) ..... **Y** Y y n N **N**

110. Mathematics ..... **Y** Y y n N **N**

111. Medicine ..... **Y** Y y n N **N**

112. Military Strategies ..... **Y** Y y n N **N**

113. Music ..... **Y** Y y n N **N**

---

114. Nursing ..... **Y** Y y n N **N**
115. Office Practices ..... **Y** Y y n N **N**
116. Physics ..... **Y** Y y n N **N**
117. Plants and Gardens ..... **Y** Y y n N **N**
118. Political Science ..... **Y** Y y n N **N**
119. Psychology ..... **Y** Y y n N **N**
120. Public Speaking ..... **Y** Y y n N **N**
121. Real Estate ..... **Y** Y y n N **N**
122. Sales Techniques ..... **Y** Y y n N **N**

125. Theater Arts ..... **Y** Y y n N **N**
126. Typing ..... **Y** Y y n N **N**
127. Welding ..... **Y** Y y n N **N**
128. Woodworking ..... **Y** Y y n N **N**

Following is a list of activities. Indicate as before how much you would like doing each one.

L = **STRONGLY LIKE**
L = Like
l = slightly like
d = slightly dislike
D = Dislike
D = **STRONGLY DISLIKE**

129. Act in a local theater production ..... **L** L l d D **D**
130. Advise others on their wardrobes and grooming ..... **L** L l d D **D**
131. Appraise the value of jewelry or antiques ..... **L** L l d D **D**
132. Attend religious services ..... **L** L l d D **D**
133. Belong to a military drill unit ..... **L** L l d D **D**
134. Build an outside deck or balcony on a house ..... **L** L l d D **D**
135. Calculate payroll deductions for a working force ..... **L** L l d D **D**
136. Care for a herd of cattle or horses ..... **L** L l d D **D**
137. Care for sick people ..... **L** L l d D **D**
138. Compete in an athletic contest ..... **L** L l d D **D**
139. Conduct religious ceremonies ..... **L** L l d D **D**
140. Deal with emergencies where people are in danger ..... **L** L l d D **D**
141. Design the landscaping for a large garden ..... **L** L l d D **D**
142. Develop a marketing strategy for a new consumer product ..... **L** L l d D **D**
143. Develop new varieties of plants and flowers ..... **L** L l d D **D**
144. Do exercises to improve your body ..... **L** L l d D **D**
145. Engage in exciting, dangerous adventures ..... **L** L l d D **D**
146. Experiment with new ways of preparing food ..... **L** L l d D **D**
147. Explain a complicated scientific concept to others ..... **L** L l d D **D**
148. Figure out why a small gasoline engine won't work ..... **L** L l d D **D**
149. File a lawsuit to straighten out an injustice ..... **L** L l d D **D**
150. Give a speech to a large group ..... **L** L l d D **D**
151. Go parachuting or hang gliding ..... **L** L l d D **D**
152. Help develop leadership talents in other people ..... **L** L l d D **D**
153. Interview people applying for a job ..... **L** L l d D **D**
154. Introduce an after-dinner speaker ..... **L** L l d D **D**
155. Lay out the advertisements for a magazine ..... **L** L l d D **D**
156. Lead the calisthenics in a physical fitness program ..... **L** L l d D **D**
157. Maintain an elaborate office filing system ..... **L** L l d D **D**
158. Make sales calls on prospective clients or customers ..... **L** L l d D **D**
159. Manage a pet shop ..... **L** L l d D **D**
160. Manage the work of others ..... **L** L l d D **D**
161. Monitor the business expenses for an organization ..... **L** L l d D **D**
162. Negotiate conflicts between irate people ..... **L** L l d D **D**

163. Operate scientific equipment ..... **L** L I d D **D**
164. Organize a political campaign ..... **L** L I d D **D**
165. Participate in a search for an escaped criminal ..... **L** L I d D **D**
166. Persuade others to adopt new methods ..... **L** L I d D **D**
167. Plan an advertising campaign ..... **L** L I d D **D**
168. Plan social activities for retired people .. **L** L I d D **D**
169. Plan the long-range budget of an organization ..... **L** L I d D **D**
170. Play the stock market ..... **L** L I d D **D**
171. Prepare the food for a large banquet .... **L** L I d D **D**
172. Raise and care for show animals ..... **L** L I d D **D**
173. Raise exotic plants, such as orchids ..... **L** L I d D **D**
174. Repair a broken-down automobile ..... **L** L I d D **D**
175. Restore antique furniture ..... **L** L I d D **D**
176. Ride in a motorcycle race ..... **L** L I d D **D**
177. Run a small specialty shop in a shopping mall ..... **L** L I d D **D**
178. Sell expensive merchandise in an exclusive shop ..... **L** L I d D **D**
179. Serve as a private secretary to a top executive ..... **L** L I d D **D**
180. Set out new trees in a garden ..... **L** L I d D **D**
181. Sketch pictures for a local magazine .... **L** L I d D **D**
182. Solve mathematical puzzles ..... **L** L I d D **D**
183. Soothe angry or upset people ..... **L** L I d D **D**
184. Supervise a large number of clerical workers ..... **L** L I d D **D**
185. Take care of small babies ..... **L** L I d D **D**
186. Take part in a public debate ..... **L** L I d D **D**
187. Tape a sprained ankle ..... **L** L I d D **D**
188. Teach new skills to adults ..... **L** L I d D **D**
189. Tell jokes to large audiences ..... **L** L I d D **D**
190. Tell stories to children ..... **L** L I d D **D**
191. Think up new products and services to sell ..... **L** L I d D **D**
192. Train an animal to do tricks ..... **L** L I d D **D**
193. Train new workers in the operation of office machines ..... **L** L I d D **D**
194. Travel independently in foreign countries ..... **L** L I d D **D**
195. Type business letters ..... **L** L I d D **D**
196. Work as a receptionist for a large company ..... **L** L I d D **D**
197. Work overseas in a foreign embassy .... **L** L I d D **D**
198. Work with a young people's religious group ..... **L** L I d D **D**
199. Write a newspaper story ..... **L** L I d D **D**
200. Write a technical report ..... **L** L I d D **D**

PART II—SKILLS

The major purpose of this section is to assess your skills to identify the major themes and then to compare your skills to those reported by others.

Following is a list of activities. Indicate your estimated level of skill in each by circling the letter corresponding to your answer. If you have never done the activity, estimate how good you think you would be if you did it.

E = **EXPERT:** Widely recognized as excellent in this area
G = Good: Have well-developed skills in this area
sa = slightly above average: Average, or a touch above
sb = slightly below average: Average, or a touch below
P = Poor: Not very skilled in this area
N = **NONE:** Have no skills in this area

Sometimes these responses will seem a bit strange for the activity mentioned, but try to judge your skill level as best you can. Try to be honest and candid.

201. Acquiring the necessary resources to carry out your plans ..... **E** G sa sb P **N**
202. Acting the lead role in a demanding drama ..... **E** G sa sb P **N**
203. Activating the creative potential in other people ..... **E** G sa sb P **N**
204. Advising others on ways to promote their image as public figures ..... **E** G sa sb P **N**
205. Advising people making career decisions, helping them plan their future ..... **E** G sa sb P **N**

206. Aiding an angry husband and wife to understand each other better ..... E G sa sb P N

207. Analyzing data, using statistical concepts ..... E G sa sb P N

208. As a member of a team, inspiring your teammates to superior performance ..... E G sa sb P N

209. Being patient with children ..... E G sa sb P N

210. Being responsible for animals in a kennel or stable ..... E G sa sb P N

211. Being tough with other people when it is necessary for business purposes ..... E G sa sb P N

212. Building furniture, using power saws and other woodworking equipment ..... E G sa sb P N

213. Caring for a wild-bird sanctuary, including preparing the proper plantings and feeding stations ..... E G sa sb P N

214. Carrying out secretarial duties, such as managing someone else's correspondence and schedule ..... E G sa sb P N

215. Charming and entertaining other people ..... E G sa sb P N

216. Coaching a highly skilled performance group, motivating them to superior achievements ..... E G sa sb P N

217. Competing against others in challenging situations ..... E G sa sb P N

218. Completing income tax returns, taking advantage of all deductions ..... E G sa sb P N

219. Composing poems or essays, using a lively vocabulary and imaginative ideas. E G sa sb P N

220. Conducting traditional ceremonies for a social or religious group ..... E G sa sb P N

221. Constructing a psychological analysis of someone, using interviews, tests, and biographical data ..... E G sa sb P N

222. Constructing outdoor projects such as decks or gazebos ..... E G sa sb P N

223. Cooking a gourmet meal, including several different courses ..... E G sa sb P N

224. Counseling an individual who is grappling with a personal moral dilemma, such as an unreported theft... E G sa sb P N

225. Creating a multi-media production, using multiple projectors, lights, and music ..... E G sa sb P N

226. Cultivating leadership talents in other people ..... E G sa sb P N

227. Dancing in some structured style, such as folk, ballroom, or modern dancing .... E G sa sb P N

228. Debating issues in a public forum ..... E G sa sb P N

229. Defending someone in physical danger. E G sa sb P N

230. Delegating authority to others ..... E G sa sb P N

231. Delivering a well-organized and entertaining speech ..... E G sa sb P N

232. Designing a laboratory experiment, setting up controls, collecting data, and applying the appropriate statistics ..... E G sa sb P N

233. Designing jewelry, using a combination of metals and gems ..... E G sa sb P N

234. Developing a long-range, visionary plan for your organization ..... E G sa sb P N

235. Developing computer programs ..... E G sa sb P N

236. Devising an arts-and-crafts project for children ..... E G sa sb P N

U.S.News & WORLD REPORT

Graduate School Directory

Information on more than 1,000 graduate programs in business, education, engineering, law, medicine, and osteopathic medicine

Up-to-date facts on
tuition, enrollment, financial aid, and entrance requirements

Statistical profiles of
the most recent entering classes, including their undergraduate grade point averages and entrance test scores

Essential phone numbers and E-mail and World Wide Web site addresses
for admissions and financial aid offices

www.usnews.com

How to use this directory

On the following pages, *U.S. News* presents a concise directory of important statistics for graduate schools in business, education, engineering, law, medicine, and osteopathic medicine. The schools are listed alphabetically by state within each of the disciplines. An index to each discipline starts on Page 202. Below is a key to abbreviations and terminology used in the directory.

Terminology

N/A. Not available from the school or not applicable.

E-mail. The electronic address of the admissions office. If instead of an E-mail address, a Web site address is given in this field, the Web site will automatically present an E-mail screen preprogrammed to reach the admissions office.

Web site. The electronic address of the school's World Wide Web site.

Internet application. The electronic address for online applications.

Application deadline. For fall 2001 enrollment. "Rolling" means no application deadline. The school acts on applications as they are received. "Varies" means deadlines vary according to department or whether applicants are U.S. citizens or foreign nationals.

Tuition. For the 1999-2000 academic year.

Room/board/expenses. For the 1999-2000 academic year.

Credit hour. The cost per credit hour for the 1999-2000 academic year.

Percent receiving grants. For fall 1999.

Enrollment. For fall1999.

Minorities. For fall 1999 percent of students who are Asian-American, African-American, Hispanic, or American Indian. When the U.S. Department of Education calculates minority enrollment percentages, it combines these demographic groupings.

Acceptance rate. Percent of applicants who were accepted for fall 1999.

Average undergraduate grade point average (1.0 to 4.0). For students who entered in fall 1999.

TOEFL requirement. A "yes" means that international students must submit scores for the Test of English as a Foreign Language, which assesses proficiency in English.

Minimum TOEFL score. The lowest score accepted for admission. Unless noted otherwise, the score listed is the minimum acceptable score for the paper TOEFL only. (The computer TOEFL is graded on a different scale.)

Business

College-funded aid and international-student aid. A "yes" means the school provides its own financial aid to students.

Average indebtedness. Computed for 1999 graduates who incurred business-school debt.

Average Graduate Management Admission Test (GMAT) score. Calculated separately for full- and part-time students who entered in fall 1999.

Average undergraduate grade point average. Calculated for full-time students who entered in fall 1999.

Average age of the entering class. Calculated for full-time students who entered in fall 1999.

Average years of prior work experience. Calculated for full-time students who entered in fall 1999.

ILLUSTRATIONS BY DAN PICASSO FOR *USN&WR*

Most popular departments. Based on student demand in the 1999-2000 academic year.

Mean starting base salary for 1999 graduates. Calculated only for graduates who were full-time students, had accepted full-time job offers, and reported salary data. Excludes employer-sponsored students. Excludes signing bonuses and other forms of compensation such as stock options.

Employment locations. For the 1999 graduating class. Abbreviations: **Intl.** International; **N.E.** Northeast (Conn., Maine, Mass., N.H., N.J., N.Y., R.I., Vt.); **M.A.** Middle Atlantic (Del., D.C., Md., Pa., Va., W.Va.); **S.** South (Ala., Ark., Fla., Ga., Ky., La., Miss., N.C., S.C., Tenn.); **M.W.** Midwest (Ill., Ind., Iowa, Kan., Mich., Minn., Mo., Neb., N.D., Ohio, S.D., Wis.); **S.W.** Southwest (Ariz., Colo., N.M., Okla., Texas); **W.** West (Alaska, Calif., Hawaii, Idaho, Mont., Nev., Ore., Utah, Wash., Wyo.).

Education

Entrance test requirement. "GRE" means that Graduate Record Examinations scores are required by some or all departments. "MAT" means that the Miller Analogies Test is required by some or all departments. "GRE or MAT" means that some or all departments require either GRE or MAT scores.

Average GRE scores. Average verbal, quantitative, and analytical scores for students who entered in fall 1999. Averages are based on the number of students who provided the school with scores. That number may be less than the total number of students entering in fall 1999.

Total fellowships, teaching assistantships, and research assistantships. For the 1999-2000 academic year.

Students reporting specialty. The percent of graduate students, both full- and part-time, reporting a program specialization in fall 1999. If this figure is less than 50 percent, this entry and the following do not appear for the school.

Student specialties. Proportion of students in the specialty-reporting population (not necessarily the entire student body) who are taking a particular specialty. Numbers may not add up to 100 because of rounding. The specialties listed are categories from the U.S. Department of Education.

Engineering

GRE requirement. A "yes" means Graduate Record Examinations scores are required by some or all departments.

Average GRE scores. For students who entered in fall 1999.

Total fellowships, teaching assistantships. For the 1999-2000 academic year.

Students reporting specialty. The percent of graduate students, both full- and part-time, reporting a program specialization in fall 1999. If this figure is less than 50 percent, this entry and the following do not appear for the school.

Student specialties. Proportion of students in the specialty-reporting population (not necessarily the entire student body) who are taking a particular specialty. Numbers may not add to 100 because of rounding.

Law

Median grant. The median value of grants to full-time students enrolled in 1999. Calculated for full-time students receiving grants, not just first-year students.

Average indebtedness. For 1999 full-time graduates who incurred law-school debt.

Midrange Law School Admission Test (LSAT) score. For full-time students who entered in fall 1999. The first number is the 25th percentile test score, the second the 75th percentile test score.

Midrange undergraduate grade point average. For full-time students who entered in fall 1999. The first number is the 25th percentile test score, the second the 75th percentile test score.

Job classifications. For the 1998 graduating class.

Employment locations: For the 1998 graduating class. Abbreviations: **Intl.** International; **N.E.** New England (Conn., Maine, Mass., N.H., R.I., Vt.); **M.A.** Middle Atlantic (N.J., N.Y., Pa.); **S.A.** South Atlantic (Del., D.C., Fla., Ga., Md., N.C., S.C., Va., W.Va.); **E.N.C.** East North Central (Ill., Ind., Mich., Ohio, Wis.); **W.N.C.** West North Central (Iowa, Kan., Minn., Mo., Neb., N.D., S.D.); **E.S.C.** East South Central (Ala., Ky., Miss., Tenn.); **W.S.C.** West South Central (Ark., La., Okla., Texas); **Mt.** Mountain (Ariz., Colo., Idaho, Mont., Nev., N.M., Utah, Wyo.); **Pac.** Pacific (Alaska, Calif., Hawaii, Ore., Wash.).

Medicine

Average indebtedness. For 1998 graduates who incurred medical-school debt.

Average Medical College Admission Test (MCAT) score. For students who entered in fall 1999. The average of verbal, physical, and biological sciences scores.

Most popular undergraduate majors. For students who entered in fall 1999.

Osteopathic medicine

Average indebtedness. For 1998 graduates who incurred osteopathic-school debt.

Average Medical College Admission Test (MCAT) score. For students who entered in fall 1999. The average of verbal, physical, and biological sciences scores.

Most popular undergraduate majors. For students who entered in fall 1999.

Business

First graduate business program: Dartmouth College's Amos Tuck School, founded in 1900. Average starting salary, Class of 1901: **$518.** Average base salary in 1999: **$84,212;** average, including all bonuses: **$128,303.**

Proportion of students who borrow to pay for their M.B.A.: **70 percent.**

Members of Congress with M.B.A.'s: **33.** Number who were in business or owned a business: **50.**

KEY DATES

By appointment: Take the Graduate Management Admission Test, given during the last three weeks of the month. Call 800-462-8669.

October-November 2000: Watch for *MBA Forums®* with business school officials. First domestic cities: New York, Boston, Washington, and Chicago. They're free if you preregister; $10 on site.

ON THE WEB

www.usnews.com

Read articles, compare business schools, see the rankings, and choose the best school for you at our interactive site.

www.gmat.org

Click on "Site Index." Link to "Explore Your Potential" and download the helpful booklet "Exploring the MBA." Or purchase it and other aids from the MBA Store. The "PhD Project" recruits African-Americans, Hispanic-Americans, and American Indians interested in pursuing a doctorate and teaching in business school.

Engineering

Famous engineers: Leonardo da Vinci, sculptor **Alexander Calder**, U.S. presidents **Herbert Hoover** and **Jimmy Carter**, former Dallas Cowboys coach **Tom Landry**, jazz great **Herbie Hancock**, *Dilbert* cartoonist **Scott Adams**, and 1940s actress **Hedy Lamarr**. Russia's **Boris Yeltsin** and the Soviet Union's **Leonid Brezhnev** were engineers, too.

Of engineering Ph.D.'s awarded by American schools in 1998, only **43 percent** went to U.S. citizens.

KEY DATES

Monday-Saturday, 2000: Take the Graduate Record Exam by computer. For an appointment, call (800) 473-2255.

April 8: The subject GREs are given on paper. For more information, see *www.gre.org*.

November and December: Dates for the fall subject GRE tests will be announced later this year.

Law

In 1998, **54 percent** of law students were male. Only **1 in 25** American lawyers is African-American, Latino, Asian American, or American Indian.

While 26 U.S. presidents were admitted to the bar and thus could practice law, only three actually had degrees from law schools: **Richard Nixon** (Duke Law School, 1937); **Gerald Ford** (Yale Law School, 1941); and **Bill Clinton** (Yale, 1973).

KEY DATES

June 12, 2000: Take the Law School Admission Test. Other dates: October 7, December 2, and Feb. 10, 2001. Many schools require you to take the test before December.

October 11: Special date for those who can prove they are Saturday Sabbath observers. Other dates: Dec. 4, 2000, and Feb. 12, 2001.

ON THE WEB

Medicine

First medical school: College of Philadelphia Department of Medicine (now the University of Pennsylvania School of Medicine), founded in 1765. **First coed medical school:** Boston University School of Medicine, 1873.

Median in-state medical school tuition: $27,086 (private), $10,324 (public); **student debt load:** $90,745.

Average salary of first-year resident: $34,104; **median for all physicians:** $160,000.

KEY DATES

April 15: Take the Medical College Admission Test. Familiarity with MCAT's manual may help prepare you for the exam, which is required by most schools.

August 19: Last MCAT testing date this year. Fee: $125 if you register by July 14, 2000. Late registrations, which must be postmarked by July 28, cost $50 more.

ON THE WEB

www.usnews.com

Peruse our rankings of medical schools, search for colleges that match your criteria, and link to the ones of interest.

www.aamc.org

At the Association of American Medical Colleges site, find resources for applicants, including information about the Medical College Admission Test, and access to the American Medical College Application Service. Through AMCAS, you file one application, which is sent electronically to any of the participating schools.

WWW.USNEWS.COM

What you can do at .edu

U.S. News Online (*www.usnews.com*) features a series of useful tools to help you find graduate schools that fit your needs and interests, and then apply to them. At every step of the process, *U.S. News*'s Web site can be a valuable resource, whether you consult our articles or our interactive databases.

- **The rankings.** Our rankings of graduate schools in the major disciplines and their specialties can be accessed by clicking on the discipline. You can even re-rank medical, law, business, education, and engineering schools according to your interests. Simply click on ranking criteria that are important to you, such as acceptance rate and reputational rank, to see which schools rise to the top.
- **Customized searches.** Our search engine generates a list of programs within a discipline, based on the criteria that matter most to you. You can narrow your search by region, specialty programs offered, test scores, even the median starting salary of recent graduates.
- **Compare schools.** Create easily printed spreadsheets that let you compare up to four schools side by side on over 25 factors, including program cost, student-body demographics, and career prospects.
- **Interactive forums.** Our new graduate school forum on application and admissions, along with our financial aid and career forums, gives you the opportunity to ask questions of experts and hear from your peers about their experiences. Trying to figure out which program is best for you, how to pay for it, and what your career prospects will be with an additional degree? Pose a query or browse through the questions and answers that other visitors have posted. We also have a specially-recruited adviser to address questions from international students.
- **Archived advice.** Articles that have appeared in past graduate school guides are updated regularly and appear on the site, as do Web-exclusive articles. Browse the index on the graduate school home page or type keywords into the search box at the top of every page. *–Kathleen M. Hogan*

Osteopathy

KEY DATES

April 15, 2000: First MCAT given. Register by March 10.

August 19: Last MCAT this year. Register by July 14.

There are **45,000** osteopaths in this country, **6 percent** of physicians.

Osteopaths handle 10 percent of all primary care visits in the United States.

Median income for osteopathic physicians: **$160,000**
